

- Preface p. v
- Acknowledgements p. vi
- Contributing Authors p. vii
- Part A Fundamentals p. 1
- 1 Characterisation of the shallow subsurface: implications for urban infrastructure and environmental assessment Mike Rosenbaum p. 3
 - 1.1 The Context p. 3
 - 1.2 The Objectives p. 4
 - 1.3 The Issues p. 5
 - 1.4 The Challenges p. 5
 - 1.5 The Conference p. 6
- 2 Bridging the gap between geoscience providers and the user community Martin Culshaw p. 7
 - 2.1 Context p. 7
 - 2.2 What is meant by geology? p. 8
 - 2.3 Geoscience information providers p. 8
 - 2.4 The development of the geological map p. 9
 - 2.4.1 Before 1835 p. 9
 - 2.4.2 After 1835 p. 12
 - 2.5 The users and their needs p. 14
 - 2.6 The evolution of the geological map to meet new user needs p. 16
 - 2.6.1 Digital geological maps p. 17
 - 2.6.2 Applied geological mapping p. 19
 - 2.7 The general public p. 23
 - 2.8 Conclusions p. 24
- 3 Definition of the modelling technologies A. Keith Turner p. 27
 - 3.1 The Context p. 27
 - 3.2 Principles of geological characterisation p. 27
 - 3.3 Initial Developments p. 28
 - 3.4 Categories of GIS p. 29
 - 3.5 Development of Geoscientific Information Systems p. 30
 - 3.6 Capabilities of GeoScientific Information Systems p. 31
 - 3.7 Advances in hardware and software technology p. 31
 - 3.8 Classes of Geoscientific Information System p. 32
 - 3.9 Towards a desirable 3D data structure p. 35
 - 3.10 The geological characterisation process p. 38
- 4 New paradigms for geoscience information management Khalil H. Nasser and Stephen Bolivar and Julie Canepa and Alison Dorries p. 41
 - 4.1 Introduction p. 41
 - 4.2 Challenges facing the geoscience community p. 41
 - 4.3 The need for new paradigms p. 43
 - 4.3.1 The challenge p. 43
 - 4.3.2 Organisational alignment to meet stakeholder/client needs p. 43
 - 4.3.3 Re-engineering the work process p. 44

- 4.3.4 An implementation strategy p. 45
- 4.4 Case Study - the LANL ER Project p. 48
- 4.4.1 ER Project goals and needs p. 48
- 4.4.2 Business process analysis p. 48
- 4.4.3 Success factors p. 49
- 4.4.4 Strategic plan development p. 50
- 4.4.5 Creating the IM team p. 50
- 4.4.6 Re-engineering the business processes p. 51
- 4.4.7 Implementation of the hardware/software infrastructure p. 52
- 4.4.8 Conceptual system design p. 52
- 4.4.9 Database design p. 54
- 4.4.10 Data migration and cleanup p. 54
- 4.4.11 Software definition and development p. 56
- 4.5 Conclusions and the Challenges Ahead p. 57
- Part B End-User Requirements p. 59
- 5 Putting the user first: implications for subsurface characterisation A. Keith Turner p. 61
- 5.1 Introduction p. 61
- 5.2 Defining user requirements p. 61
- 5.3 The problem with traditional products p. 62
- 5.4 Developing new products to satisfy modern users p. 62
- 5.5 Geo-Objects and subsurface modelling p. 63
- 5.6 Solutions to improve efficiency p. 65
- 5.7 Implementing new information technology p. 65
- 5.8 Putting the User first p. 67
- 5.9 Conclusions p. 68
- 6 What are the end-user issues? Settlement risk management in underground construction Frank Kaalberg and Jacco Haasnoot and Holger Netzel p. 69
- 6.1 The North-South Line Metro Project p. 69
- 6.2 Geological Characteristics of the Subsurface p. 71
- 6.3 Creating a Three Dimensional Ground Model p. 72
- 6.4 Numerical Modelling of Tunnelling Effects p. 76
- 6.5 The Integrated Boring Control System (IBCS) p. 79
- 6.6 End-User issues p. 82
- 7 Data requirements for geo-environmental management: end-user and producer perspectives for a harbour Rodney L. Stevens p. 85
- 7.1 Introduction p. 85
- 7.2 End-user and provider perspectives p. 85
- 7.3 Harbour site investigations p. 88
- 7.3.1 Documentation Methods p. 88
- 7.3.2 Sediment parameter priorities p. 90
- 7.3.3 Multi-functional considerations p. 92
- 7.4 Conclusions p. 93
- 8 A decision support system for groundwater: water management issues for opencast mining Marek Nawalany and Grzegorz Sinicyn and Krzysztof Kochanek and Bartosz Czyzkowski p. 97

- 8.1 Introduction p. 97
- 8.2 Impact on groundwater p. 98
- 8.3 Making decisions p. 99
- 8.4 A case study from the Konin region of Poland p. 99
- 8.5 Conclusions p. 102
- Part C Model Construction and Visualisation p. 103
- 9 Visualisation: are the images really useful? René Prissang p. 105
- 9.1 Introduction p. 105
- 9.2 What is Visualisation? p. 105
- 9.3 Geoscientific visualisation p. 106
- 9.3.1 Data Visualisation p. 106
- 9.3.2 Shape visualisation p. 107
- 9.3.3 Volume visualisation p. 107
- 9.3.4 Process Visualisation p. 109
- 9.4 Examples p. 109
- 9.5 Caveats p. 112
- 9.6 Conclusions p. 113
- 10 Numerical schemes for process simulation: software for coupling pattern recognition to process modelling Wouter Zijl and Anna Trykozko p. 115
- 10.1 Introduction p. 115
- 10.2 Cell complexes and their properties p. 116
- 10.3 Process modelling p. 117
- 10.4 Paradigms p. 118
- 10.5 Discrete analogues of the paradigm equations p. 119
- 10.5.1 The curl side p. 119
- 10.5.2 The div side p. 120
- 10.6 Discrete flux-based process models p. 121
- 10.7 Numerical example: homogenisation of flow parameters p. 123
- 10.8 Conclusions p. 126
- 11 Regional subsurface models and their practical usage Hans-Georg Sobisch and Henning Bombien p. 129
- 11.1 The Context p. 129
- 11.2 Modelling methods p. 129
- 11.3 Boundary conditions p. 130
- 11.4 Outlook p. 130
- 12 Slope stability estimation using GIS Maria Ferentinou and Michael Sakellariou p. 135
- 12.1 The Context p. 135
- 12.2 The relevance of GIS to slope stability p. 135
- 12.3 Development of a landslide hazard assessment tool p. 136
- 12.4 Case Study: Diakopto, Greece p. 138
- 12.5 Landslide hazard zonation p. 138
- 12.6 Conclusions p. 139
- 13 Using 2D GIS for the 3D reconstruction of the Corno Zuccone sackung, Val Taleggio (Italy) Andrea Zanchi and Simone Sterlacchini and Crosta G.B. p. 141

- 13.1 Context p. 141
- 13.2 The Corno Zuccone landslide p. 141
- 13.3 Using 2D GIS for 3D modelling in gOcad p. 142
- 13.4 Reconstructing the Corno Zuccone landslide p. 142
- 13.5 Discussion p. 143
- 14 Sedimentation modelling: data analysis in Rotterdam Harbour Robert Vuurens and Pieter Maurenbrecher p. 151
 - 14.1 Introduction p. 151
 - 14.2 Sedimentary environments p. 151
 - 14.3 Harbour study areas p. 152
 - 14.4 Data mining p. 153
 - 14.5 Data-driven modelling p. 154
 - 14.6 Parameter evaluation p. 156
 - 14.7 Conclusions p. 158
- 15 Fluid flow in fractured formations Christos Tsakiroglou and Maria Theodoropoulou and Vagelis Karoutsos p. 161
 - 15.1 Introduction p. 161
 - 15.2 Laboratory experiments p. 162
 - 15.3 Theoretical flow of a fluid p. 164
 - 15.3.1 Flow through a pore p. 164
 - 15.3.2 Flow through a single fracture p. 166
 - 15.4 Discussion p. 167
 - 15.5 Conclusions p. 168
- 16 Effect of strain-softening on settlement due to tunnelling in soft soil Ardie Purwodihardjo and Bernard Cambou p. 173
 - 16.1 Introduction p. 173
 - 16.2 Constitutive models p. 173
 - 16.2.1 Mohr-Coulomb model p. 173
 - 16.2.2 Strain-Softening Model p. 174
 - 16.2.3 Identification of parameters p. 175
 - 16.2.4 Validation of the model p. 175
 - 16.3 Deformation analysis p. 179
 - 16.3.1 Input Data p. 179
 - 16.3.2 Computation procedure p. 179
 - 16.4 Conclusions p. 187
- Part D Dissemination Strategies p. 189
- 17 Dissemination of geoscience data: societal implications Ed F.J. de Mulder and Jan Kooijman p. 191
 - 17.1 Introduction p. 191
 - 17.2 Data as a treasure p. 192
 - 17.3 Data collection and storage p. 194
 - 17.4 Data dissemination in the European context p. 198
 - 17.5 Technical feasibility versus societal expectation p. 198
 - 17.6 Discussion p. 199

- 18 An economic model for the dissemination of national geological survey products and services Richard Groot and Elisabeth Kusters p. 201
- 18.1 Introduction p. 201
- 18.2 The Public Interest p. 203
- 18.3 Economic characteristics of geological surveys p. 205
- 18.3.1 The assets p. 205
- 18.3.2 What constitutes the monopoly of a geological survey within an ICT environment? p. 206
- 18.3.3 Is it in the public interest to allow a geological survey to compete in the market for products C(1)? p. 209
- 18.3.4 What should be the price-setting principles in relation to the strategic goals? p. 209
- 18.4 Management p. 211
- 18.5 The role of regulation p. 212
- 18.6 Regulatory reform p. 213
- 18.7 Conclusions p. 214
- 19 Access to national geoscience repositories using digital geoscience spatial models Ian Smith p. 217
- 19.1 The Context p. 217
- 19.2 The role of a Geological Survey Organisation p. 217
- 19.3 Strategies for preservation of information p. 219
- 19.4 The Digital Geoscience Spatial Model p. 219
- 19.5 The requirements for a Digital Geoscience Spatial Model p. 221
- 19.6 Conclusions p. 223
- 20 Dissemination and visualisation of earth system models for the Dutch subsurface Jan-Diederik van Wees and Rob Versseput and Ronald Allard and Erik Simmelink and Henk Pagnier and Ipo Ritsema and Pieter Meijers p. 225
- 20.1 The Context p. 225
- 20.2 Digital database of the Dutch subsurface p. 226
- 20.3 Dissemination and visualisation system p. 226
- 20.3.1 The Web-based dissemination component p. 226
- 20.3.2 The Client-based 3D visualiser p. 227
- 20.4 Capabilities of the Geo3DJViewer p. 229
- 20.5 Future development of the viewer p. 232
- 20.6 Added value for geoscience interpretation p. 233
- 20.7 Conclusions p. 233
- Part E Property Prediction p. 235
- 21 Total Geological History: a web-based modelling approach to the anticipation, observation and understanding of siteconditions Leslie Davison and Peter Fookes and Fred Baynes p. 237
- 21.1 The Context p. 237
- 21.2 Total Geological History p. 238
- 21.3 Initial models p. 238
- 21.4 Case history: Emerson Green p. 238
- 21.4.1 Developing a site specific model for Emerson Green p. 239
- 21.5 Geological Environment Matrix (GEM) p. 239

- 21.5.1 Digital data p. 240
- 21.5.2 Knowledge based systems p. 241
- 21.5.3 Data base systems p. 241
- 21.6 A middle course p. 242
- 21.6.1 Codifying knowledge p. 242
- 21.6.2 The role of case histories p. 243
- 21.6.3 Navigation p. 243
- 21.6.4 Communication issues p. 243
- 21.7 A solution p. 244
- 21.7.1 Interface design p. 244
- 21.7.2 Content p. 245
- 21.8 Summary p. 246
- 22 3D modelling system for ground engineering Senol Ozmutlu and Robert Hack p. 253
- 22.1 Introduction p. 253
- 22.2 Case Study 1: Foundations p. 253
- 22.3 Case Study 2: Tunnels p. 255
- 22.4 Conclusions p. 259
- 23 Rock mass quality assessment based on deformation: experience from recent tunnels Villy Kontogianni and Stathis Stiros p. 261
- 23.1 Introduction p. 261
- 23.2 Design approach p. 261
- 23.3 Prediction of tunnel convergence p. 262
- 23.4 Monitoring tunnel convergence p. 263
- 23.5 Tymfristos tunnel and the equivalent GSIE p. 265
- 23.6 Conclusions p. 267
- 24 Improving subsurface parameter estimation through guiding geophysical inversions with a priori geological data Peter Jackson p. 269
- 24.1 Introduction p. 269
- 24.2 Testing Resistivity Inversion p. 272
- 24.3 Constructing a constraint compatible with 'step' changes in resistivity p. 275
- 24.4 A field case study p. 279
- 24.5 Conclusions p. 279
- 25 Characterisation of void space utilising pore network models Christos Tsakiroglou p. 283
- 25.1 Introduction p. 283
- 25.2 Pores p. 283
- 25.3 Fractures p. 284
- 25.4 Characterising the micro-porous matrix of a clay till p. 284
- 25.5 SEM image analysis p. 286
- 25.6 Conclusions p. 287
- 26 Assisting data interpretation: the cone penetration test Jos Maccabiani and Dominique Ngan-Tillard and Peter Verhoef p. 293
- 26.1 Introduction p. 293
- 26.2 The INURCS project p. 293
- 26.3 CPT interpretation p. 294

- 26.4 Automated segmentation of CPT sequences p. 294
- 26.5 Segment parameters p. 296
- 26.6 Fuzzy clustering p. 297
- 26.6.1 Traditional fuzzy c-means p. 297
- 26.6.2 Extended fuzzy c-means ('E-FCM') p. 297
- 26.7 Conclusions p. 298
- Part F Managing Uncertainty p. 301
- 27 Impact of geoinformatics on the emerging Geoscience Knowledge Integration Paradigm Frank D'Agnesse and Grady O'Brien p. 303
- 27.1 Introduction p. 303
- 27.2 Addressing society's emerging concerns p. 304
- 27.3 From data to wisdom p. 304
- 27.4 The need for a GeoInfrastructure p. 306
- 27.4.1 Integrative protocols p. 307
- 27.4.2 Enabling geoscientists p. 307
- 27.4.3 GeoInfrastructure Value p. 307
- 27.4.4 Implementation of the GeoInfrastructure p. 308
- 27.5 The development of a 'GeoPro' structure p. 309
- 27.6 The need for standards p. 311
- 27.7 Conclusions p. 312
- 28 Assessment of uncertainties in volume and yield estimations of clastic deposits Brecht Wassing and Hans Veldkamp and Chris Bremmer p. 313
- 28.1 Introduction p. 313
- 28.2 Site investigation p. 313
- 28.3 Results of the site investigation p. 314
- 28.3.1 General geology of the Maas deposits p. 314
- 28.3.2 Geology of the southern and northern pilot sites p. 314
- 28.3.3 Sources of inaccuracy of data p. 315
- 28.4 Geostatistics for estimating volume and grading p. 316
- 28.5 Conclusions p. 321
- 29 Uncertainty with characterisation of soils Paulo Coelho p. 323
- 29.1 The Context p. 323
- 29.2 Geotechnical features of natural soils p. 323
- 29.3 Case study: Baixo Mondego p. 325
- 29.3.1 Geotechnical properties p. 325
- 29.3.2 Stress history and consolidation properties p. 326
- 29.4 Practical implications p. 328
- 30 Analysing uncertainty when modelling geological structures Pauli Saksa and Pirjo Hellä and Jorma Nummela p. 331
- 30.1 Introduction p. 331
- 30.2 Sources of uncertainty p. 331
- 30.3 Methodology p. 332
- 30.4 Case Study p. 333
- 30.4.1 Main site characteristics p. 333

- 30.4.2 Applying a statistical model p. 335
- 30.4.3 Uncertainty ratings p. 335
- 30.4.4 Uncertainty aspects concerning the Olkiluoto site model p. 337
- 30.5 Conclusions p. 339
- 31 Uncertainty characterisation: reliability methods for slope stability Rafael Jiménez Rodríguez and José Chacón Montero p. 341
- 31.1 Introduction p. 341
- 31.2 Model formulation p. 342
- 31.3 Statistical characterisation of input variables p. 344
- 31.4 Reliability of a single component p. 345
- 31.4.1 Analytical methods p. 345
- 31.4.2 Simulation methods p. 345
- 31.5 Reliability of a parallel system p. 349
- 31.5.1 Simulation results p. 350
- 31.5.2 FORM and SORM results p. 351
- 31.6 Conclusions p. 352
- Part G The Way Ahead p. 357
- 32 Current themes, issues and challenges concerning the prediction of subsurface conditions Rob Evans p. 359
- 32.1 Challenges p. 359
- 32.2 The Research Challenges p. 359
- 32.3 Responses to the Representation Challenge p. 361
- 32.4 Responses to the Cognition Challenge p. 363
- 32.4.1 Responsibility for interpretation p. 363
- 32.4.2 The role of a geoscientist p. 364
- 32.5 Responses to the Uncertainty Challenge p. 365
- 32.5.1 Uncertainties in the Data p. 366
- 32.5.2 Uncertainties in the Modelling p. 366
- 32.5.3 Communicating Uncertainty p. 367
- 32.5.4 Time and scaling p. 368
- 32.6 Responses to the Data Challenge p. 368
- 32.6.1 Data storage p. 369
- 32.6.2 Data dissemination p. 369
- 32.6.3 Standardisation of data formats and models p. 370
- 32.6.4 Importance of providing metadata p. 371
- 32.7 Responses to the Simulation Challenge p. 371
- 32.7.1 Auditing and checking models p. 372
- 32.7.2 Simulation of reality p. 372
- 32.8 Responses to the Provider's Challenge p. 373
- 32.8.1 What can geoscience produce? p. 373
- 32.8.2 Incorporating knowledge within the model p. 374
- 32.8.3 New techniques p. 374
- 32.9 Responses to the User's Challenge p. 375
- 32.10 Geo-education p. 376

- 32.11 Conclusions p. 377
- 33 The Global Geoscientific Knowledge Network: overcoming the impediments to subsurface characterisation A. Keith Turner and Mike Rosenbaum p. 379
- 33.1 Introduction p. 379
- 33.2 The role of technological innovation p. 380
- 33.3 Societal demands on the geosciences p. 383
- 33.3.1 The role and status of National Geological Surveys p. 383
- 33.3.2 Current international initiatives and programmes p. 384
- 33.4 Current research in geovisualisation p. 385
- 33.4.1 The geovisualisation research agenda p. 386
- 33.4.2 The ICA Research Network Operations p. 387
- 33.5 Impediments to subsurface characterisation p. 388
- 33.6 Strategy for overcoming impediments p. 388
- 33.7 Research concerning technological issues p. 389
- 33.8 Networking to support the research agenda p. 390
- 33.9 Research agenda for developing protocols p. 390
- 33.10 Establishing the future international network p. 391
- 33.11 Potential network partners p. 392
- Index p. 395
