Contents

The numbers in parentheses after section titles identify previous sections that contain the minimum prerequisite material.

Chapter 1

Introduction 1

1.1 Elements and Limitations of Communication Systems 2
- Information, Messages, and Signals 2
- Elements of a Communication System 3
- Fundamental Limitations 5

1.2 Modulation and Coding 6
- Modulation Methods 6
- Modulation Benefits and Applications 8
- Coding Methods and Benefits 11

1.3 Electromagnetic Wave Propagation Over Wireless Channels 12
- RF Wave Deflection 14
- Skywave Propagation 14

1.4 Emerging Developments 17

1.5 Societal Impact and Historical Perspective 20
- Historical Perspective 21

1.6 Prospectus 24

Chapter 2

Signals and Spectra 27

2.1 Line Spectra and Fourier Series 29
- Phasors and Line Spectra 29
- Periodic Signals and Average Power 33
- Fourier Series 35
- Convergence Conditions and Gibbs Phenomenon 39
- Parseval's Power Theorem 42

2.2 Fourier Transforms and Continuous Spectra (2.1) 43
- Fourier Transforms 43
- Symmetric and Causal Signals 47
- Rayleigh's Energy Theorem 50
- Duality Theorem 52
- Transform Calculations 54

2.3 Time and Frequency Relations (2.2) 54
- Superposition 55
- Time Delay and Scale Change 55
- Frequency Translation and Modulation 58
- Differentiation and Integration 60

2.4 Convolution (2.3) 62
- Convolution Integral 63
- Convolution Theorems 65

2.5 Impulses and Transforms in the Limit (2.4) 68
- Properties of the Unit Impulse 68
- Impulses in Frequency 71
- Step and Signum Functions 74
- Impulses in Time 76

2.6 Discrete Time Signals and the Discrete Fourier Transform 80
- Convolution Using the DFT (2.4) 83

Chapter 3

Signal Transmission and Filtering 91

3.1 Response of LTI Systems (2.4) 92
- Impulse Response and the Superposition Integral 93
- Transfer Functions and Frequency Response 96
- Block-Diagram Analysis 102

3.2 Signal Distortion in Transmission (3.1) 105
- Distortionless Transmission 105
- Linear Distortion 107
- Equalization 110
- Nonlinear Distortion and Companding 113

3.3 Transmission Loss and Decibels (3.2) 116
- Power Gain 116
- Transmission Loss and Repeaters 118
- Fiber Optics 119
- Radio Transmission 122

3.4 Filters and Filtering (3.3) 126
- Ideal Filters 126
- Bandlimiting and Timelimiting 128
- Real Filters 129
- Pulse Response and Risetime 134

3.5 Quadrature Filters and Hilbert Transforms (3.4) 138

3.6 Correlation and Spectral Density (3.4) 141
Correlation of Power Signals 141
Correlation of Energy Signals 145
Spectral Density Functions 147

Chapter 4
Linear CW Modulation 161
4.1 Bandpass Signals and Systems (3.4) 162
Analog Message Conventions 162
Bandpass Signals 164
Bandpass Transmission 168
Bandwidth 172
4.2 Double-Sideband Amplitude Modulation (4.1) 173
AM Signals and Spectra 173
DSB Signals and Spectra 176
Tone Modulation and Phasor Analysis 178
4.3 Modulators and Transmitters (4.2) 179
Product Modulators 180
Square-Law and Balanced Modulators 180
Switching Modulators 184
4.4 Suppressed-Sideband Amplitude Modulation (3.5, 4.3) 185
SSB Signals and Spectra 185
SSB Generation 188
VSB Signals and Spectra 191
4.5 Frequency Conversion and Demodulation (4.4) 193
Frequency Conversion 194
Synchronous Detection 195
Envelope Detection 198

Chapter 5
Angle CW Modulation 207
5.1 Phase and Frequency Modulation (4.3) 208
PM and FM Signals 208
Narrowband PM and FM 212
Tone Modulation 213
Multitone and Periodic Modulation 220
5.2 Transmission Bandwidth and Distortion (5.1) 223
Transmission Bandwidth Estimates 223
Linear Distortion 226
Nonlinear Distortion and Limiters 229
5.3 Generation and Detection of FM and PM (4.5, 5.2) 232
Direct FM and VCOs 233
Phase Modulators and Indirect FM 234
Triangular-Wave FM 237
Frequency Detection 239
5.4 Interference (5.3) 243
Interfering Sinusoids 243
Deemphasis and Preemphasis Filtering 245
FM Capture Effect 247

Chapter 6
Sampling and Pulse Modulation 257
6.1 Sampling Theory and Practice (2.6, 4.2) 258
Chopper Sampling 258
Ideal Sampling and Reconstruction 263
Practical Sampling and Aliasing 266
6.2 Pulse-Amplitude Modulation (6.1) 272
Flat-Top Sampling and PAM 272
6.3 Pulse-Time Modulation (6.2) 275
Pulse-Duration and Pulse-Position Modulation 275
PPM Spectral Analysis 278

Chapter 7
Analog Communication Systems 287
7.1 Receivers for CW Modulation (2.6, 4.5, 5.3) 288
Superheterodyne Receivers 288
Direct Conversion Receivers 292
Special-Purpose Receivers 293
Receiver Specifications 294
Scanning Spectrum Analyzers 295
7.2 Multiplexing Systems (4.5, 6.1) 297
Frequency-Division Multiplexing 297
Quadrature-Carrier Multiplexing 302
Time-Division Multiplexing 303
Crosstalk and Guard Times 307
Comparison of TDM and FDM 309
7.3 Phase-Locked Loops (7.1) 311
PLL Operation and Lock-In 311
Synchronous Detection and Frequency Synthesizers 314
Linearized PLL Models and FM Detection 317
7.4 Television Systems (7.1) 319
Video Signals, Resolution, and Bandwidth 319
Monochrome Transmitters and Receivers 324
Color Television 327
HDTV 332

Chapter 8
Probability and Random Variables 345
8.1 Probability and Sample Space 346
Probabilities and Events 346
Sample Space and Probability Theory 347
Conditional Probability and Statistical Independence 351
8.2 Random Variables and Probability Functions (8.1) 354
Discrete Random Variables and CDFs 355
Continuous Random Variables and PDFs 358
Transformations of Random Variables 361
Joint and Conditional PDFs 363
8.3 Statistical Averages (2.3, 8.2) 365
Means, Moments, and Expectation 365
Standard Deviation and Chebyshev's Inequality 366
Multivariate Expectations 368
Characteristic Functions 370
8.4 Probability Models (8.3) 371
Binomial Distribution 371
Poisson Distribution 373
Gaussian PDF 374
Rayleigh PDF 376
Bivariate Gaussian Distribution 378
Central Limit Theorem 379

Chapter 9
Random Signals and Noise 391
9.1 Random Processes (3.6, 8.4) 392
Ensemble Averages and Correlation Functions 393
Ergodic and Stationary Processes 397
Gaussian Processes 402
9.2 Random Signals (9.1) 403
Power Spectrum 403
Superposition and Modulation 408
Filtered Random Signals 409
9.3 Noise (9.2) 412
Thermal Noise and Available Power 413
White Noise and Filtered Noise 416
Noise Equivalent Bandwidth 419
System Measurements Using White Noise 421
9.4 Baseband Signal Transmission With Noise (9.3) 422
Additive Noise and Signal-to-Noise Ratios 422
Analog Signal Transmission 424
9.5 Baseband Pulse Transmission With Noise (9.4) 427
Pulse Measurements in Noise 427
Pulse Detection and Matched Filters 429

Chapter 10
Noise in Analog Modulation Systems 439
10.1 Bandpass Noise (4.4, 9.2) 440
System Models 441
Quadrature Components 443
Envelope and Phase 445
Correlation Functions 446
10.2 Linear CW Modulation With Noise (10.2) 448
Synchronous Detection 449
Envelope Detection and Threshold Effect 451
10.3 Angle CW Modulation With Noise (5.3, 10.2) 454
Postdetection Noise 454
Destination *S/N* 458
FM Threshold Effect 460
Threshold Extension by FM Feedback Detection 463
10.4 Comparison of CW Modulation Systems (9.4, 10.3) 464
10.5 Phase-Locked Loop Noise Performance (7.3, 10.1) 467
10.6 Analog Pulse Modulation With Noise (6.3, 9.5) 468
Signal-to-Noise Ratios 468
False-Pulse Threshold Effect 471

Chapter 11
Baseband Digital Transmission 479
11.1 Digital Signals and Systems (9.1) 481
Digital PAM Signals 481
Transmission Limitations 484
Power Spectra of Digital PAM 487
Spectral Shaping by Precoding 490
11.2 Noise and Errors (9.4, 11.1) 491
Binary Error Probabilities 492
Regenerative Repeaters 496
Matched Filtering 498
Correlation Detector 501
M-ary Error Probabilities 502

11.3 Bandlimited Digital PAM Systems (11.2) 506
Nyquist Pulse Shaping 506
Optimum Terminal Filters 509
Equalization 513
Correlative Coding 517
11.4 Synchronization Techniques (11.2) 523
Bit Synchronization 524
Scramblers and PN Sequence Generators 526
Frame Synchronization 531

Chapter 12
Digitization Techniques for Analog Messages and Computer Networks 543
12.1 Pulse-Code Modulation (6.2, 11.1) 544
PCM Generation and Reconstruction 545
Quantization Noise 548
Nonuniform Quantizing and Companding 550
12.2 PCM With Noise (11.2, 12.1) 554
Decoding Noise 555
Error Threshold 557
PCM Versus Analog Modulation 557
12.3 Delta Modulation and Predictive Coding (12.2) 559
Delta Modulation 560
Delta-Sigma Modulation 565
Adaptive Delta Modulation 566
Differential PCM 567
LPC Speech Synthesis 569
12.4 Digital Audio Recording (12.3) 571
CD Recording 571
CD Playback 574
12.5 Digital Multiplexing (12.1, 9.2) 575
Multiplexers and Hierarchies 575
Digital Subscriber Lines 579
Synchronous Optical Network 580
Data Multiplexers 582

Chapter 13
Channel Coding 591
13.1 Error Detection and Correction (11.2) 592
Repetition and Parity-Check Codes 592
Interleaving 595
Code Vectors and Hamming Distance 595
Forward Error-Correction (FEC) Systems 597
ARQ Systems 600
13.2 Linear Block Codes (13.1) 604
Matrix Representation of Block Codes 604
Syndrome Decoding 608
Cyclic Codes 611
M-ary Codes 616
13.3 Convolutional Codes (13.2) 617
Convolutional Encoding 617
Free Distance and Coding Gain 623
Decoding Methods 629
Turbo Codes 635

Chapter 14
Bandpass Digital Transmission 647
14.1 Digital CW Modulation (4.5, 5.1, 11.1) 648
Spectral Analysis of Bandpass Digital Signals 649
Amplitude Modulation Methods 650
Phase Modulation Methods 653
Frequency Modulation Methods 655
Minimum-Shift Keying (MSK) and Gaussian-Filtered MSK 658
14.2 Coherent Binary Systems (11.2, 14.1) 663
Optimum Binary Detection 663
Coherent OOK, BPSK, and FSK 668
Timing and Synchronization 670
Interference 671
14.3 Noncoherent Binary Systems (14.2) 673
Envelope of a Sinusoid Plus Bandpass Noise 673
Noncoherent OOK 674
Noncoherent FSK 677
Differentially Coherent PSK 679
14.4 Quadrature-Carrier and *M*-ary Systems (14.2) 682
Quadrature-Carrier Systems 682
M-ary PSK Systems 685
M-ary QAM Systems 689
M-ary FSK Systems 690
Comparison of Digital Modulation Systems 692
14.5 Orthogonal Frequency Division Multiplexing (OFDM) (14.4, 7.2, 2.6) 696
Generating OFDM Using the Inverse Discrete Fourier Transform 697
Channel Response and Cyclic Extensions 700

14.6 Trellis-Coded Modulation (13.3, 14.4) 703
TCM Basics 704
Hard Versus Soft Decisions 712
Modems 712

Chapter 15
Spread-Spectrum Systems 721
15.1 Direct-Sequence Spread-Spectrum (14.2) 723
DSSS Signals 723
DSSS Performance in Presence of Interference 726
Multiple Access 728
Multipath and the Rake Receiver 729
15.2 Frequency-Hopping Spread-Spectrum (15.1) 733
FHSS Signals 733
FHSS Performance in the Presence of Interference 735
Other SS Systems 737
15.3 Coding (15.1, 11.4) 738
15.4 Synchronization (7.3) 743
Acquisition 743
Tracking 745
15.5 Wireless Systems (15.2, 3.3, 14.5) 746
Telephone Systems 746
Wireless Networks 751
15.6 Ultra-Wideband Systems (6.3, 15.1) 754
UWB Signals 754
Coding Techniques 756
Transmit-Reference System 758
Multiple Access 759
Comparison With Direct-Sequence Spread-Spectrum 760

Chapter 16
Information and Detection Theory 767
16.1 Information Measure and Source Encoding (12.1) 769
Information Measure 769
Entropy and Information Rate 771
Coding for a Discrete Memoryless Channel 774
Predictive Coding for Sources With Memory 778
16.2 Information Transmission on Discrete Channels (16.1) 782
Mutual Information 782
Discrete Channel Capacity 786
Coding for the Binary Symmetric Channel 788
16.3 Continuous Channels and System Comparisons (16.2) 791
Continuous Information 791
Continuous Channel Capacity 794
Ideal Communication Systems 796
System Comparisons 799
16.4 Signal Space 803
Signals as Vectors 803
The Gram-Schmidt Procedure 806
16.5 Optimum Digital Detection (16.3, 16.4) 808
Optimum Detection and MAP Receivers 809
Error Probabilities 815
Signal Selection and Orthogonal Signaling 818

Appendix: Circuit and System Noise (9.4) 827
Circuit and Device Noise 828
Amplifier Noise 835
System Noise Calculations 840
Cable Repeater Systems 844

Tables 847
T.1 Fourier Transforms 847
T.2 Fourier Series 849
T.3 Mathematical Relations 851
T.4 The Sinc Function 854
T.5 Probability Functions 855
T.6 Gaussian Probabilities 857
T.7 Glossary of Notation 859

Solutions to Exercises 861
Answers to Selected Problems 904
