

- List of figures p. xvii
- List of tables p. xxxvii
- Preface p. xxxix
- Acknowledgments p. xliii
- Part 1 Analysis and modeling of reinforced concrete p. 1
- 1 Introduction p. 3
- 1.1 Behavioral simulation of structures p. 3
- 1.2 Engineering applications p. 6
- 1.3 Organization of the book p. 12
- References p. 12
- 2 Two-dimensional analysis of reinforced concrete p. 13
- 2.1 The concept of smeared cracks: a space-averaged constitutive model p. 13
- 2.2 Direction of cracking p. 15
- 2.3 Implicit formulation: preliminary discussion p. 17
- 2.4 Explicit formulation: the active crack approach p. 18
- 2.5 The orthogonal two-way fixed crack model p. 20
- 2.6 The quasi-orthogonal two-way fixed crack approach p. 44
- 2.7 Verification of the two-way fixed crack model p. 45
- 2.8 Four-way fixed crack model p. 54
- 2.9 Verification of the four-way fixed crack model p. 61
- 2.10 Two-dimensional structural analysis p. 68
- 2.11 Shear failure of a high-strength concrete beam p. 101
- 2.12 A shear wall subject to horizontal two-directional loading p. 112
- 2.13 An underground box culvert p. 115
- References p. 121
- 3 Three-dimensional analysis of reinforced concrete p. 125
- 3.1 General concept p. 125
- 3.2 An elasto-plastic and continuum-fracture model for uncracked concrete p. 126
- 3.3 A three-dimensional zoning concept and anisotropic post-cracking response p. 134
- 3.4 Nonlinear structural analysis p. 144
- References p. 173
- 4 Nonlinear soil-structure interaction p. 176
- 4.1 The complete soil-structure system of nonlinearity p. 176
- 4.2 Modeling of soil and soil-RC interface p. 177
- 4.3 Nonlinear static response of underground RC structures p. 188
- 4.4 A nonlinear dynamic analysis of the RC-soil system p. 195
- 4.5 The failure/collapse mechanism of damaged underground structures p. 209
- References p. 223
- 5 Three-dimensional analysis of shells and frames p. 225
- Part 1 Shell elements p. 225
- 5.1 Introduction p. 225
- 5.2 Degenerated shell elements and layered formulations p. 226
- 5.3 Geometrical nonlinearity p. 231
- 5.4 Integration scheme p. 232
- 5.5 Crack patterns in a shell element subjected to out-of-plane transverse loads p. 233
- 5.6 Verification of shell element p. 234

- Part 2 Frame elements p. 248
- 5.7 Fiber formulation p. 248
- 5.8 Verification of frame elements p. 260
- 5.9 Buckling and spalling models p. 276
- 5.10 Frame members under large lateral deformation p. 283
- 5.11 Post-peak cyclic response analysis p. 288
- 5.12 Geometrical nonlinearity in the collapse of RC piers p. 294
- References p. 296
- 6 Analysis of strengthened and retrofitted structures p. 300
- 6.1 Background p. 300
- 6.2 A structural steel model p. 300
- 6.3 A carbon fiber sheet model p. 308
- 6.4 A steel-concrete interface model p. 309
- 6.5 Concentric and eccentric compression of strengthened columns p. 319
- 6.6 RC columns strengthened by steel encasement p. 331
- 6.7 RC columns strengthened by carbon fiber sheet wrapping p. 335
- References p. 337
- 7 Nonlinear interaction of multi-directional cracking p. 339
- 7.1 Crack-to-crack interaction p. 339
- 7.2 A beam containing pre-cracks: two-way crack interaction p. 340
- 7.3 Numerical simulation of non-orthogonal two-way crack interaction p. 348
- 7.4 Three-way crack interaction p. 357
- 7.5 Crack interaction in which two cracks are inclined close to each other p. 360
- 7.6 Shear failure of RC members subject to pre-cracking and combined axial tension and shear p. 369
- Part 2 Constitutive modeling of reinforced concrete p. 383
- References p. 381
- 8 Stress transfer across reinforced concrete interfaces p. 385
- 8.1 Engineering needs p. 385
- 8.2 The basic joint element model p. 386
- 8.3 An enhanced joint element model p. 411
- References p. 429
- 9 The elasto-plastic fracture model for concrete p. 431
- 9.1 Basic concepts of fracturing and plasticity p. 431
- 9.2 Continuum fracture in concrete nonlinearity under triaxial confinement p. 432
- 9.3 Plasticity in concrete nonlinearity p. 444
- 9.4 Triaxial elasto-plastic and fracture model for concrete p. 456
- 9.5 Strength and damage of confined concrete columns p. 464
- References p. 491
- 10 Stress transfer across cracks in reinforced concrete p. 495
- 10.1 Micro-mechanics of crack face contact p. 495
- 10.2 Literature review p. 495
- 10.3 The basic contact density model p. 497
- 10.4 Verification of the basic contact density model p. 509
- 10.5 Characteristics of the stress transfer mechanism p. 521
- 10.6 Application of the stress transfer model to RC p. 528

- 10.7 Qualitative evaluation of the basic contact density model p. 529
- 10.8 The universal model of stress transfer across cracks in RC p. 541
- 10.9 Verification of the universal stress transfer model p. 554
- References p. 563
- 11 Bond mechanics of reinforced concrete p. 565
- 11.1 Multi-scale modeling p. 565
- 11.2 Local bond stress-slip-strain relation for deformed bars p. 573
- 11.3 Bond characteristics in the post-yield range p. 589
- 11.4 Strain-slip model of anchored bar subject to cyclic loading p. 597
- 11.5 A basic tension-stiffening model under reversed loading including the post-yield range p. 604
- 11.6 Enhancement of macro models by meso-level bonding p. 618
- 11.7 A computational model for structural analysis p. 631
- 11.8 Micro-mechanical model of bond-bar rib- concrete stress transfer p. 637
- References p. 647
- 12 Modeling of reinforcing bars in structures p. 651
- 12.1 Embedded bars in concrete under coupled axial and transverse displacement p. 651
- 12.2 A computational model under coupled axial and transverse displacement p. 666
- 12.3 Stability of reinforcing bar and cover concrete p. 682
- 12.4 Modeling for post-yield buckling of reinforcement p. 685
- 12.5 Stability of reinforcement and fracture of cover concrete p. 696
- References p. 709
- Index p. 713
