

Table of Contents

- Chapter 1 Ceramic Membranes and Membrane Processes
 - 1.1 Introduction
 - 1.2 Membrane Processes
 - 1.2.1 Gas separation
 - 1.2.2 Pervaporation
 - 1.2.3 Reverse osmosis and nanofiltration
 - 1.2.4 Ultrafiltration and microfiltration
 - 1.2.5 Dialysis
 - 1.2.6 Electrodialysis
 - 1.2.7 Membrane contactor
 - 1.2.8 Membrane reactors
 - References
- Chapter 2 Preparation of Ceramic Membranes
 - 2.1 Introduction
 - 2.2 Slip casting
 - 2.3 Tape casting
 - 2.4 Pressing
 - 2.5 Extrusion
 - 2.6 Sol-gel process
 - 2.7 Dip-coating
 - 2.8 Chemical vapour deposition (CVD)
 - 2.9 Preparation of hollow fibre ceramic membranes
 - 2.9.1 Preparation of spinning suspension
 - 2.9.2 Spinning of ceramic hollow fibre precursors
 - 2.9.3 Sintering
 - 2.9.4 Example 1: Preparation of porous Al₂O₃ hollow fibre membranes
 - 2.9.5 Example 2: Preparation of TiO₂/Al₂O₃ composite hollow fibre membranes
 - 2.9.6 Example 3: Preparation of dense perovskite hollow fibre membranes
 - Appendix 2.1 Surface forces
 - References
- Chapter 3 Characterisation of Ceramic Membranes
 - 3.1 Introduction
 - 3.2 Morphology of membrane surfaces and cross sections
 - 3.3 Porous ceramic membranes
 - 3.3.1 Gas adsorption/desorption isotherms
 - 3.3.2 Permporometry
 - 3.3.3 Mercury porosimetry
 - 3.3.4 Thermoporometry
 - 3.3.5 Liquid displacement techniques
 - (a) Bubble point method
 - (b) Liquid displacement method
 - 3.3.6 Permeation method
 - (a) Liquid permeation
 - (b) Gas permeation

- 3.3.7 Measurements of solute rejection
- 3.4 Dense ceramic membranes
 - 3.4.1 Leakage test
 - 3.4.2 Permeation measurements
 - 3.4.3 XRD
 - 3.4.4 Mechanical strength
 - Notation
 - References
- Chapter 4 Transport and Separation of Gases in Porous Ceramic Membranes
 - 4.1 Introduction
 - 4.2 Performance indicators of gas separation membranes
 - 4.3 Ceramic membranes for gas separation
 - 4.4 Transport Mechanisms
 - 4.4.1 Knudsen and slip flow
 - 4.4.2 Viscous flow
 - 4.4.3 Surface flow
 - 4.4.4 Capillary condensation
 - 4.4.5 Configurational or micropore diffusion
 - 4.4.6 Simultaneous occurrence of different mechanism
 - 4.5 Modification of porous ceramic membranes for gas separation
 - 4.6 Resistance model for gas transport in composite membranes
 - 4.6.1 Effect of support layers
 - 4.6.2 Effect of non-zeolitic pores
 - 4.6.3 Effect of coating
 - 4.7 System design
 - 4.7.1 Operating Schemes
 - (a) Perfect mixing
 - (b) Cross flow
 - (c) Parallel plug flow
 - 4.7.2 Design equations for membrane processes in gas separation
 - (a) Perfect mixing
 - (b) Cross flow
 - (c) Cocurrent flow
 - (d) Countercurrent flow
 - Notation
 - References
- Chapter 5 Ceramic Hollow Fibre Membrane Contactors for Treatment of Gases/Vapours
 - 5.1 Introduction
 - 5.2 General review
 - 5.3 Operating modes and mass transfer coefficients
 - 5.3.1 Nonwetted mode
 - 5.3.2 Wetted mode
 - 5.3.3 Mass transfer coefficients determined from experiments
 - 5.4 Mass transfer in hollow fibre contactors
 - 5.4.1 Mass transfer in hollow fibre lumen

- 5.4.2 Mass transfer across membrane
- 5.4.3 Mass transfer in shell side of a contactor
- 5.4.4 Nonwetted, wetted, and partially wetted conditions in a hollow fibre contactor
- 5.5 Effect of chemical reaction
 - 5.5.1 Instantaneous reaction
 - 5.5.2 Fast reaction
- 5.6 Design equ
