

Table of Contents

- Preface to the Second Edition p. xiii
- Symbols p. xv
- 1 Elementary Reactions in Ideal Reactors p. 1
 - 1.1 Material Balances p. 1
 - 1.1.1 Measures of Composition p. 4
 - 1.1.2 Measures of Reaction Rate p. 5
 - 1.2 Elementary Reactions p. 5
 - 1.2.1 Kinetic Theory of Gases p. 6
 - 1.2.2 Rate of Formation p. 6
 - 1.2.3 First-Order Reactions p. 8
 - 1.2.4 Second-Order Reactions with One Reactant p. 8
 - 1.2.5 Second-Order Reactions with Two Reactants p. 9
 - 1.2.6 Third-Order Reactions p. 9
 - 1.3 Reaction Order and Mechanism p. 9
 - 1.4 Ideal, Isothermal Reactors p. 12
 - 1.4.1 Ideal Batch Reactors p. 12
 - 1.4.2 Reactor Performance Measures p. 17
 - 1.4.3 Piston Flow Reactors p. 19
 - 1.4.4 Continuous Flow Stirred Tanks p. 24
 - 1.5 Mixing Times and Scaleup p. 26
 - 1.6 Dimensionless Variables and Numbers p. 31
 - 1.7 Batch Versus Flow and Tank Versus Tube p. 33
 - Suggested Further Readings p. 36
 - Problems p. 37
- 2 Multiple Reactions in Batch Reactors p. 41
 - 2.1 Multiple and Nonelementary Reactions p. 41
 - 2.1.1 Reaction Mechanisms p. 42
 - 2.1.2 Byproducts p. 43
 - 2.2 Component Reaction Rates for Multiple Reactions p. 43
 - 2.3 Multiple Reactions in Batch Reactors p. 44
 - 2.4 Numerical Solutions to Sets of First-Order ODEs p. 46
 - 2.5 Analytically Tractable Examples p. 52
 - 2.5.1 The nth-Order Reaction p. 52
 - 2.5.2 Consecutive First-Order Reactions, $A \rightarrow B \rightarrow C$... p. 53
 - 2.5.3 Quasi-Steady Hypothesis p. 56
 - 2.5.4 Autocatalytic Reactions p. 62
 - 2.6 Variable-Volume Batch Reactors p. 65
 - 2.6.1 Systems with Constant Mass p. 65
 - 2.6.2 Fed-Batch Reactors p. 71
 - 2.7 Scaleup of Batch Reactions p. 73
 - 2.8 Stoichiometry and Reaction Coordinates p. 74
 - 2.8.1 Matrix Formulation of Reaction Rates p. 74
 - 2.8.2 Stoichiometry of Single Reactions p. 76

- 2.8.3 Stoichiometry of Multiple Reactions p. 77
- Suggested Further Readings p. 78
- Problems p. 79
- Appendix 2.1 Numerical Solution of Ordinary Differential Equations p. 84
- 3 Isothermal Piston Flow Reactors p. 89
- 3.1 Piston Flow with Constant Mass Flow p. 90
- 3.1.1 Gas Phase Reactions p. 94
- 3.1.2 Liquid Phase Reactions p. 104
- 3.2 Scaleup Relationships for Tubular Reactors p. 107
- 3.2.1 Scaling Factors p. 107
- 3.2.2 Scaling Factors for Tubular Reactors p. 112
- 3.3 Scaleup Strategies for Tubular Reactors p. 113
- 3.3.1 Scaling in Parallel and Partial Parallel p. 113
- 3.3.2 Scaling in Series for Constant-Density Fluids p. 114
- 3.3.3 Scaling in Series for Gas Flows p. 116
- 3.3.4 Scaling with Geometric Similarity p. 117
- 3.3.5 Scaling with Constant Pressure Drop p. 119
- 3.4 Scaling Down p. 120
- 3.5 Transpired-Wall Reactors p. 122
- Suggested Further Readings p. 124
- Problems p. 124
- 4 Stirred Tanks and Reactor Combinations p. 129
- 4.1 Continuous Flow Stirred Tank Reactors p. 129
- 4.2 Method of False Transients p. 131
- 4.3 CSTRs with Variable Density p. 135
- 4.3.1 Liquid Phase CSTRs p. 136
- 4.3.2 Computational Scheme for Variable-Density CSTRs p. 137
- 4.3.3 Gas Phase CSTRs p. 138
- 4.4 Scaling Factors for Liquid Phase Stirred Tanks p. 143
- 4.5 Combinations of Reactors p. 145
- 4.5.1 Series and Parallel Connections p. 145
- 4.5.2 Tanks in Series p. 148
- 4.5.3 Recycle Loops p. 150
- 4.5.4 Maximum Production Rate p. 153
- 4.6 Imperfect Mixing p. 154
- Suggested Further Readings p. 154
- Problems p. 155
- Appendix 4.1 Solution of Nonlinear Algebraic Equations p. 158
- 5 Thermal Effects and Energy Balances p. 163
- 5.1 Temperature Dependence of Reaction Rates p. 163
- 5.1.1 Arrhenius Temperature Dependence p. 163
- 5.1.2 Optimal Temperatures for Isothermal Reactors p. 166
- 5.2 Energy Balance p. 170
- 5.2.1 Nonisothermal Batch Reactors p. 172
- 5.2.2 Nonisothermal Piston Flow p. 175
- 5.2.3 Heat Balances for CSTRs p. 178

- 5.3 Scaleup of Nonisothermal Reactors p. 185
- 5.3.1 Avoiding Scaleup Problems p. 185
- 5.3.2 Heat Transfer to Jacketed Stirred Tanks p. 187
- 5.3.3 Scaling Up Stirred Tanks with Boiling p. 190
- 5.3.4 Scaling Up Tubular Reactors p. 191
- Suggested Further Readings p. 194
- Problems p. 195
- 6 Design and Optimization Studies p. 199
- 6.1 Consecutive Reaction Sequence p. 199
- 6.2 Competitive Reaction Sequence p. 216
- Suggested Further Readings p. 218
- Problems p. 218
- Appendix 6.1 Numerical Optimization Techniques p. 220
- 7 Fitting Rate Data and Using Thermodynamics p. 225
- 7.1 Fitting Data to Models p. 225
- 7.1.1 Suggested Forms for Kinetic Models p. 226
- 7.1.2 Fitting CSTR Data p. 228
- 7.1.3 Fitting Batch and PFR Data p. 233
- 7.1.4 Design of Experiments and Model Discrimination p. 238
- 7.1.5 Material Balance Closure p. 239
- 7.1.6 Confounded Reactors p. 241
- 7.2 Thermodynamics of Chemical Reactions p. 244
- 7.2.1 Terms in the Energy Balance p. 244
- 7.2.2 Reaction Equilibria p. 252
- Suggested Further Readings p. 269
- Problems p. 269
- Appendix 7.1 Linear Regression Analysis p. 274
- 8 Real Tubular Reactors in Laminar Flow p. 279
- 8.1 Flow in Tubes with Negligible Diffusion p. 280
- 8.1.1 Criterion for Neglecting Radial Diffusion p. 281
- 8.1.2 Mixing-Cup Averages p. 282
- 8.1.3 Trapezoidal Rule p. 284
- 8.1.4 Preview of Residence Time Theory p. 287
- 8.2 Tube Flows with Diffusion p. 288
- 8.2.1 Convective Diffusion of Mass p. 288
- 8.2.2 Convective Diffusion of Heat p. 290
- 8.2.3 Use of Dimensionless Variables p. 290
- 8.2.4 Criterion for Neglecting Axial Diffusion p. 291
- 8.3 Method of Lines p. 292
- 8.3.1 Governing Equations for Cylindrical Coordinates p. 292
- 8.3.2 Solution by Euler's Method p. 294
- 8.3.3 Accuracy and Stability p. 295
- 8.3.4 Example Solutions p. 296
- 8.4 Effects of Variable Viscosity p. 301
- 8.4.1 Governing Equations for Axial Velocity p. 302
- 8.4.2 Calculation of Axial Velocities p. 303

- 8.4.3 Calculation of Radial Velocities p. 304
- 8.5 Comprehensive Models p. 307
- 8.6 Performance Optimization p. 307
- 8.6.1 Optimal Wall Temperatures p. 308
- 8.6.2 Static Mixers p. 308
- 8.6.3 Small Effective Diameters p. 310
- 8.7 Scaleup of Laminar Flow Reactors p. 311
- 8.7.1 Isothermal Laminar Flow p. 311
- 8.7.2 Nonisothermal Laminar Flow p. 312
- Suggested Further Readings p. 312
- Problems p. 313
- Appendix 8.1 Convective Diffusion Equation p. 316
- Appendix 8.2 External Resistance to Heat Transfer p. 317
- Appendix 8.3 Finite-Difference Approximations p. 319
- 9 Packed Beds and Turbulent Tubes p. 323
- 9.1 Packed-Bed Reactors p. 324
- 9.1.1 Incompressible Fluids p. 324
- 9.1.2 Compressible Fluids in Packed Beds p. 333
- 9.2 Turbulence p. 334
- 9.2.1 Turbulence Models p. 335
- 9.2.2 Computational Fluid Dynamics p. 336
- 9.3 Axial Dispersion Model p. 336
- 9.3.1 Danckwerts Boundary Conditions p. 339
- 9.3.2 First-Order Reactions p. 340
- 9.3.3 Utility of the Axial Dispersion Model p. 342
- 9.3.4 Nonisothermal Axial Dispersion p. 344
- 9.3.5 Shooting Solutions to Two-Point Boundary Value Problems p. 344
- 9.3.6 Axial Dispersion with Variable Density p. 352
- 9.4 Scaleup and Modeling Considerations p. 352
- Suggested Further Readings p. 352
- Problems p. 353
- 10 Heterogeneous Catalysis p. 355
- 10.1 Overview of Transport and Reaction Steps p. 357
- 10.2 Governing Equations for Transport and Reaction p. 358
- 10.3 Intrinsic Kinetics p. 360
- 10.3.1 Intrinsic Rate Expressions from Equality of Rates p. 361
- 10.3.2 Models Based on a Rate-Controlling Step p. 363
- 10.3.3 Recommended Models p. 367
- 10.4 Effectiveness Factors p. 368
- 10.4.1 Pore Diffusion p. 368
- 10.4.2 Film Mass Transfer p. 371
- 10.4.3 Nonisothermal Effectiveness p. 372
- 10.4.4 Deactivation p. 374
- 10.5 Experimental Determination of Intrinsic Kinetics p. 376
- 10.6 Unsteady Operation and Surface Inventories p. 380
- Suggested Further Readings p. 381

- Problems p. 382
- 11 Multiphase Reactors p. 385
 - 11.1 Gas-Liquid and Liquid-Liquid Reactors p. 385
 - 11.1.1 Two-Phase Stirred Tank Reactors p. 386
 - 11.1.2 Measurement of Mass Transfer Coefficients p. 401
 - 11.1.3 Fluid-Fluid Contacting in Piston Flow p. 404
 - 11.1.4 Other Mixing Combinations p. 410
 - 11.1.5 Prediction of Mass Transfer Coefficients p. 412
 - 11.2 Three-Phase Reactors p. 415
 - 11.3 Moving-Solids Reactors p. 417
 - 11.3.1 Bubbling Fluidization p. 419
 - 11.3.2 Fast Fluidization p. 420
 - 11.3.3 Spouted Beds p. 420
 - 11.3.4 Liquid-Fluidized Beds p. 421
 - 11.4 Noncatalytic Fluid-Solid Reactions p. 421
 - 11.5 Scaleup of Multiphase Reactors p. 427
 - 11.5.1 Gas-Liquid Reactors p. 427
 - 11.5.2 Gas-Moving Solids Reactors p. 429
 - Suggested Further Readings p. 429
 - Problems p. 430
- 12 Biochemical Reaction Engineering p. 433
 - 12.1 Enzyme Catalysis p. 434
 - 12.1.1 Michaelis-Menten Kinetics p. 434
 - 12.1.2 Inhibition, Activation, and Deactivation p. 438
 - 12.1.3 Immobilized Enzymes p. 439
 - 12.1.4 Reactor Design for Enzyme Catalysis p. 440
 - 12.2 Cell Culture p. 444
 - 12.2.1 Growth Dynamics p. 446
 - 12.2.2 Reactors for Freely Suspended Cells p. 450
 - 12.2.3 Immobilized Cells p. 457
 - 12.2.4 Tissue Culture p. 458
 - 12.3 Combinatorial Chemistry p. 458
 - Suggested Further Readings p. 459
 - Problems p. 459
- 13 Polymer Reaction Engineering p. 461
 - 13.1 Polymerization Reactions p. 461
 - 13.1.1 Step Growth Polymerizations p. 462
 - 13.1.2 Chain Growth Polymerizations p. 466
 - 13.2 Molecular Weight Distributions p. 468
 - 13.2.1 Distribution Functions and Moments p. 469
 - 13.2.2 Addition Rules for Molecular Weight p. 470
 - 13.2.3 Molecular Weight Measurements p. 470
 - 13.3 Kinetics of Condensation Polymerizations p. 471
 - 13.3.1 Conversion p. 471
 - 13.3.2 Number- and Weight-Average Chain Lengths p. 472
 - 13.3.3 Molecular Weight Distribution Functions p. 473

- 13.4 Kinetics of Addition Polymerizations p. 478
- 13.4.1 Living Polymers p. 479
- 13.4.2 Free-Radical Polymerizations p. 481
- 13.4.3 Transition Metal Catalysis p. 486
- 13.4.4 Vinyl Copolymerizations p. 486
- 13.5 Polymerization Reactors p. 490
- 13.5.1 Stirred Tanks with a Continuous Polymer Phase p. 492
- 13.5.2 Tubular Reactors with a Continuous Polymer Phase p. 495
- 13.5.3 Suspending-Phase Polymerizations p. 507
- 13.6 Scaleup Considerations p. 509
- 13.6.1 Binary Polycondensations p. 509
- 13.6.2 Self-Condensing Polycondensations p. 509
- 13.6.3 Living Addition Polymerizations p. 510
- 13.6.4 Vinyl Addition Polymerizations p. 510
- Suggested Further Readings p. 511
- Problems p. 511
- 14 Unsteady Reactors p. 513
- 14.1 Unsteady Stirred Tanks p. 513
- 14.1.1 Transients in Isothermal CSTRs p. 515
- 14.1.2 Nonisothermal Stirred Tank Reactors p. 523
- 14.2 Unsteady Piston Flow p. 526
- 14.3 Unsteady Convective Diffusion p. 529
- Suggested Further Readings p. 530
- Problems p. 530
- 15 Residence Time Distributions p. 535
- 15.1 Residence Time Theory p. 535
- 15.1.1 Inert Tracer Experiments p. 536
- 15.1.2 Means and Moments p. 539
- 15.2 Residence Time Models p. 540
- 15.2.1 Ideal Reactors and Reactor Combinations p. 540
- 15.2.2 Hydrodynamic Models p. 552
- 15.3 Reaction Yields p. 557
- 15.3.1 First-Order Reactions p. 557
- 15.3.2 Other Reactions p. 560
- 15.4 Extensions of Residence Time Theory p. 569
- 15.4.1 Unsteady Flow Systems p. 570
- 15.4.2 Contact Times p. 570
- 15.4.3 Thermal Times p. 571
- 15.5 Scaleup Considerations p. 571
- Suggested Further Readings p. 572
- Problems p. 572
- 16 Reactor Design at Meso-, Micro-, and Nanoscales p. 575
- 16.1 Mesoscale Reactors p. 577
- 16.1.1 Flow in Rectangular Geometries p. 578
- 16.1.2 False Transients Applied to PDEs p. 580
- 16.1.3 Jet Impingement Mixers p. 584

- 16.2 Microscale Reactors p. 584
- 16.2.1 Mixing Times p. 585
- 16.2.2 Radial or Cross-Channel Diffusion p. 586
- 16.2.3 False Transients Versus Method of Lines p. 587
- 16.2.4 Axial Diffusion in Microscale Ducts p. 587
- 16.2.5 Second-Order Reactions with Unmixed Feed p. 591
- 16.2.6 Microelectronics p. 594
- 16.2.7 Chemical Vapor Deposition p. 595
- 16.3 Nanoscale Reactors p. 596
- 16.3.1 Self-Assembly p. 597
- 16.3.2 Molecular Dynamics p. 598
- 16.4 Scaling, Up or Down p. 599
- Suggested Further Readings p. 599
- Problems p. 599
- References p. 601
- Index p. 603
