

# Table of contents provided by Syndetics

- **Preface**
- **Notation**
- **Conversion**
- **Factors**
- **1 Introduction**
- **1.1 Structural Concrete**
- **1.2 Historical Background**
- **1.3 Advantages and Disadvantages of Reinforced Concrete**
- **1.4 Codes of Practice**
- **1.5 Design Philosophy and Concepts**
- **1.6 Units of Measurement**
- **1.7 Loads**
- **1.8 Safety Provisions**
- **1.9 Structural Concrete Elements**
- **1.10 Structural Concrete Design**
- **1.11 Accuracy of Calculations**
- **1.12 Concrete High-Rise Buildings**
- **References**
- **2 Properties of Reinforced Concrete**
- **2.1 Factors Affecting the Strength of Concrete**
- **2.2 Compressive Strength**
- **2.3 Stress-Strain Curves of Concrete**
- **2.4 Tensile Strength of Concrete**
- **2.5 Flexural Strength (Modulus of Rupture) of Concrete**
- **2.6 Shear Strength**
- **2.7 Modulus of Elasticity of Concrete**
- **2.8 Poisson's Ratio**
- **2.9 Shear Modulus**
- **2.10 Modular Ratio**
- **2.11 Volume Changes of Concrete**
- **2.12 Creep**
- **2.13 Models for Predicting the Shrinkage and Creep of Concrete**
- **2.14 Unit Weight of Concrete**
- **2.15 Fire Resistance**
- **2.16 High-Performance Concrete**
- **2.17 Lightweight Concrete**
- **2.18 Fibrous Concrete**
- **2.19 Steel Reinforcement**
- **Summary**
- **References**
- **Problems**
- **3 Flexural Analysis of Reinforced Concrete Beams**
- **3.1 Introduction**
- **3.2 Assumptions**

- **3.3 Behavior of Simply Supported Reinforced Concrete Beam Loaded to Failure**
- **3.4 Types of Flexural Failure and Strain Limits**
- **3.5 Load Factors**
- **3.6 Strength-Reduction Factor  $\phi$**
- **3.7 Significance of Analysis and Design Expressions**
- **3.8 Equivalent Compressive Stress Distribution**
- **3.9 Singly Reinforced Rectangular Section in Bending**
- **3.10 Lower Limit or Minimum Percentage of Steel**
- **3.11 Adequacy of Sections**
- **3.12 Bundled Bars**
- **3.13 Sections in the Transition Region**
- **3.14 Rectangular Sections with Compression Reinforcement**
- **3.15 Analysis of T- and I-Sections**
- **3.16 Dimensions of Isolated T-Shaped Sections**
- **3.17 Inverted L-Shaped Sections**
- **3.18 Sections of Other Shapes**
- **3.19 Analysis of Sections Using Tables**
- **3.20 Additional Examples**
- **3.21 Examples Using SI Units**
- **Summary**
- **References**
- **Problems**
- **4 Flexural Design of Reinforced Concrete Beams**
- **4.1 Introduction**
- **4.2 Rectangular Sections with Reinforcement Only**
- **4.3 Spacing of Reinforcement and Concrete Cover**
- **4.4 Rectangular Sections with Compression Reinforcement**
- **4.5 Design of**
- **4.6 Additional Examples**
- **4.7 Examples Using SI Units**
- **Summary**
- **Problems**
- **5 Alternative Design Methods**
- **5.1 Introduction**
- **5.2 Load Factors**
- **5.3 Strength-Reduction Factor**
- **5.4 Rectangular Sections with Tension Reinforcement**
- **5.5 Rectangular Sections with Compression Reinforcement**
- **5.6 Design of T-Sections**
- **5.7 Strut and Tie Method**
- **References**
- **6 Deflection and Control of Cracking**
- **6.1 Deflection of Structural Concrete Members**
- **6.2 Instantaneous Deflection**
- **6.3 Long-Time Deflection**
- **6.4 Allowable Deflection**

- **6.5 Deflection Due to Combinations of Loads**
- **6.6 Cracks in Flexu**
