

Table of Contents

- Preface
- Chapter 1 Fundamentals
- 1.3 Classification of Robots
- 1.4 What Is Robotics?
- 1.1 Introduction
- 1.2 What Is a Robot?
- 1.5 History of Robotics
- 1.7 Robot Components
- 1.9 Robot Joints
- 1.10 Robot Coordinates
- 1.11 Robot Reference Frames
- 1.12 Programming Modes
- 1.13 Robot Characteristics
- 1.14 Robot Workspace
- 1.15 Robot Languages
- 1.18 Social Issues
- 1.6 Advantages and Disadvantages of Robots
- 1.16 Robot Applications
- 1.8 Robot Degrees of Freedom
- 1.17 Other Robots and Applications
- Summary
- References
- Problems
- Chapter 2 Kinematics of Robots: Position Analysis
- 2.1 Introduction
- 2.2 Robots as Mechanisms
- 2.3 Conventions
- 2.4 Matrix Representation
- 2.5 Homogeneous Transformation Matrices
- 2.6 Representation of Transformations
- 2.8 Forward and Inverse Kinematics of Robots
- 2.10 Forward and Inverse Kinematic Equations: Orientation
- 2.11 Forward and Inverse Kinematic Equations: Position and Orientation
- 2.7 Inverse of Transformation Matrices
- 2.9 Forward and Inverse Kinematic Equations: Position
- 2.12 Denavit-Hartenberg Representation of Forward Kinematic Equations of Robots
- 2.13 The Inverse Kinematic Solution of Robots
- 2.14 Inverse Kinematic Programming of Robots
- 2.15 Degeneracy and Dexterity
- 2.16 The Fundamental Problem with the Denavit-Hartenberg Representation
- 2.17 Design Projects

- Robot
- Summary
- References
- Problems
- Chapter 3 Differential Motions and Velocities
 - 3.1 Introduction
 - 3.2 Differential Relationships
 - 3.3 Jacobian
 - 3.4 Differential versus Large-Scale Motions
 - 3.5 Differential Motions of a Frame versus a Robot
 - 3.6 Differential Motions of a Frame
 - 3.7 Interpretation of the Differential Change
 - 3.8 Differential Changes between Frames
 - 3.9 Differential Motions of a Robot and Its Hand Frame
 - 3.10 Calculation of the Jacobian
 - 3.11 How to Relate the Jacobian and the Differential Operator
 - 3.12 Inverse Jacobian
 - 3.13 Design Projects
 - Robot
 - Summary
 - References
 - Problems
- Chapter 4 Dynamic Analysis and Forces
 - 4.1 Introduction
 - 4.2 Lagrangian Mechanics: A Short Overview
 - 4.3 Effective Moments of Inertia
 - 4.4 Dynamic Equations for Multiple DOF Robots
 - 4.5 Static Force Analysis of Robots
 - 4.6 Transformation of Forces and Moments between Coordinate Frames
 - 4.7 Design Project
 - Summary
 - References
 - Problems
- Chapter 5 Trajectory Planning
 - 5.1 Introduction
 - 5.2 Path Trajectory
 - 5.3 Joint-Space versus Cartesian-Space Descriptions
 - 5.4 Basics of Trajectory Planning
 - 5.5 Joint-Space Trajectory Planning
 - 5.6 Cartesian-Space Trajectories
 - 5.7 Continuous Trajectory Recording
 - 5.8 Design Project
 - Summary
 - References
 - Problems
- Chapter 6 Motion Control Systems

- 6.1 Introduction
- 6.2 Basic Components and Terminology
- 6.3 Block Diagrams
- 6.4 System Dynamics
- 6.5 The Laplace Transform
- 6.6 The Inverse Laplace Transform
- 6.7 Transfer Function
- 6.8 Block Diagram Algebra
- 6.9 Characteristics of First Order Transfer Functions
- 6.10 Characteristics of Second Order Transfer Functions
- 6.11 Characteristic Equation: Pole/Zero Mapping
- 6.12 Steady-State Error
- 6.13 Root Locus Method
- 6.14 Proportional Controllers
- 6.15 Proportional-plus-Integral Controllers
- 6.16 Proportional-plus-Derivative Controllers
- 6.17 Proportional-Integral-Derivative Controller (PID)
- 6.18 Lead and Lag Compensators
- 6.19 The Bode Diagram and Frequency Domain Analysis
- 6.20 Open-Loop versus Closed-Loop Applications
- 6.21 Multiple-Input and Multiple-Output Systems
- 6.22 State-Space Control Methodology
- 6.23 Digital Control
- 6.25 Electromechanical Systems Dynamics: Robot Actuation and Control
- 6.26 Design Projects
- References
- 6.24 Nonlinear Control Systems
- Summary
- Problems
- Chapter 7 Actuators and Drive Systems
- 7.1 Introduction
- 7.2 Characteristics of Actuating Systems
- 7.3 Comparison of Actuating Systems
- 7.4 Hydraulic Actuators
- 7.5 Pneumatic Devices
- 7.6 Electric Motors 279
- 7.7 Microprocessor Control of Electric Motors
- 7.8 Magnetostrictive Actuators
- 7.9 Shape-Memory Type Metals
- 7.10 Electroactive Polymer Actuators (EAP)
- 7.11 Speed Reduction
- 7.12 Other Systems
- 7.13 Design Projects
- Summary
- References
- Problems 317

- Chapter 8 Sensors
- 8.2 Sensor Characteristics
- 8.3 Sensor Utilization
- 8.4 Position Sensors
- 8.6 Acceleration Sensors
- 8.7 Force and Pressure Sensors
- 8.8 Torque Sensors
- 8.9 Microswitches
- 8.10 Visible Light and Infrared Sensors
- 8.11 Touch and Tactile Sensors
- 8.12 Proximity Sensors
- 8.13 Range Finders
- 8.14 Sniff Sensors
- 8.15 Taste Sensors
- 8.16 Vision Systems
- 8.1 Introduction
- 8.5 Velocity Sensors
- 8.17 Voice Recognition Devices
- 8.18 Voice Synthesizers
- 8.19 Remote Center Compliance (RCC) Device
- 8.20 Design Project
- Summary
- References
- Chapter 9 Image Processing and Analysis with Vision Systems
- 9.1 Introduction
- 9.2 Basic Concepts
- 9.3 Fourier Transform and Frequency Content of a Signal
- 9.4 Frequency Content of an Image; Noise, Edges
- 9.5 Resolution and Quantization
- 9.6 Sampling Theorem
- 9.7 Image-Processing Techniques
- 9.8 Histogram of Images
- 9.9 Thresholding
- 9.10 Spatial Domain Operations: Convolution Mask
- 9.11 Connectivity
- 9.12 Noise Reduction
- 9.13 Edge Detection
- 9.14 Sharpening an Image
- 9.15 Hough Transform
- 9.16 Segmentation 388
- 9.17 Segmentation by Region Growing and Region Splitting
- 9.18 Binary Morphology Operations
- 9.19 Gray Morphology Operations
- 9.20 Image Analysis
- 9.21 Object Recognition by Features
- 9.22 Depth Measurement with Vision Systems

- 9.23 Specialized Lighting
- 9.24 Image Data Compression
- 9.25 Color Images
- 9.26 Heuristics
- 9.27 Applications of Vision Systems
- 9.28 Design Project
 - Summary
 - References
 - Problems
- Chapter 10 Fuzzy Logic Control
 - 10.1 Introduction
 - 10.2 Fuzzy Control: What Is Needed
 - 10.3 Crisp Values versus Fuzzy Values
 - 10.4 Fuzzy Sets: Degrees of Membership and Truth
 - 10.5 Fuzzification
 - 10.6 Fuzzy Inference Rule Base
 - 10.7 Defuzzification
 - 10.8 Simulation of Fuzzy Logic Controller
 - 10.9 Applications of Fuzzy Logic in Robotics
 - 10.10 Design Project
 - Summary
 - References
 - Problems
- Appendix A A.1 Matrix Algebra and Notation: A Review
 - A.2 Calculation of an Angle from Its Sine, Cosine, or Tangent
 - Problems
- Appendix B Image Acquisition Systems
 - B.1 Vidicon Camera
 - B.2 Digital Camera
 - References
- Appendix C Root Locus and Bode Diagram with Matlab™
 - C.1 Root Locus
 - C.2 Bode Diagram
- Appendix D Simulation of Robots with Commercial Software
