

## Table of Contents

- Preface p. xiii
- Introduction p. xv
- Part 1 Economics-Based Project Appraisal Techniques p. 1
- 1 Decision Making and Project Appraisal p. 3
- 1.1 Decision making context p. 3
- 1.2 Techniques for decision making p. 4
- 1.3 Primacy of the rational model p. 13
- 1.4 Decision-making conditions p. 14
- 1.5 Project planning process p. 16
- 1.6 Example of a decision process p. 22
- 1.7 Summary p. 25
- 1.8 Review of succeeding chapters p. 26
- 2 Basic Tools for Economic Appraisal p. 29
- 2.1 Introduction p. 29
- 2.2 The time value of money p. 29
- 2.3 The estimation of interest p. 30
- 2.4 Simple and compound interest p. 31
- 2.5 Nominal and effective interest rates p. 33
- 2.6 Continuous compounding p. 34
- 2.7 Time equivalence p. 35
- 2.8 Economic computation p. 37
- 2.9 Summary p. 50
- 3 Present Worth Evaluation p. 51
- 3.1 Introduction p. 51
- 3.2 Present worth - the comparison process p. 52
- 3.3 Summary p. 65
- 4 Equivalent Annual Worth Computations p. 67
- 4.1 Introduction p. 67
- 4.2 The pattern of capital recovery p. 67
- 4.3 Modifying annual payments to include salvage value p. 69
- 4.4 Evaluating a single project p. 71
- 4.5 The comparison process p. 72
- 4.6 Summary p. 77
- 5 Rate of Return Computation p. 79
- 5.1 Introduction p. 79
- 5.2 Minimum Acceptable Rate of Return (MARR) p. 79
- 5.3 Internal Rate of Return (IRR) p. 80
- 5.4 IRR for a single project p. 80
- 5.5 Incremental analysis p. 87
- 5.6 Summary p. 94
- 6 Benefit/Cost Ratio, Depreciation and Taxation p. 96
- 6.1 Introduction p. 96
- 6.2 Costs, benefits and disbenefits p. 96
- 6.3 Estimating the benefit/cost ratio for a single project p. 97

- 6.4 Comparing mutually exclusive options using incremental benefit/cost ratios p. 98
- 6.5 Depreciation p. 99
- 6.6 Taxation p. 102
- 6.7 Summary p. 104
- 7 Cost-Benefit Analysis of Public Projects p. 107
- 7.1 Introduction p. 107
- 7.2 Historical background to cost-benefit analysis p. 108
- 7.3 Theoretical basis for cost-benefit analysis p. 110
- 7.4 The procedure of cost-benefit analysis p. 111
- 7.5 Identifying the main project options p. 111
- 7.6 Identifying costs and benefits p. 111
- 7.7 Placing valuations on all costs and benefits/disbenefits p. 112
- 7.8 Assessing and comparing the cost-benefit performance of options p. 115
- 7.9 Sensitivity analysis p. 117
- 7.10 Final decision p. 119
- 7.11 Case study: the cost-benefit analysis of a highway improvement project p. 119
- 7.12 Case study: water supply scheme in a developing country p. 128
- 7.13 Case study: cost-benefit analysis of sewer flooding alleviation p. 135
- 7.14 Advantages and disadvantages of traditional cost-benefit analysis p. 137
- 7.15 Techniques for valuing non-economic impacts p. 138
- 7.16 Using cost-benefit analysis within different areas of engineering p. 148
- 7.17 Summary p. 151
- 8 Economic Analysis of Renewable Energy Supply and Energy Efficient Projects p. 154
- 8.1 Introduction p. 154
- 8.2 Policy context p. 154
- 8.3 Renewable energy supply and energy efficient technologies p. 157
- 8.4 Economic measures for renewable energy and energy efficient projects p. 163
- 8.5 Estimating GHG emissions p. 179
- 8.6 Uncertainty p. 183
- 8.7 Case studies p. 186
- 9 Value for Money in Construction p. 193
- 9.1 Definition of Value for Money p. 193
- 9.2 Defining Value for Money in the context of a construction project p. 194
- 9.3 Achieving Value for Money during construction p. 194
- 9.4 Whole-life costing p. 195
- 9.5 The concept of 'milestones' p. 196
- 9.6 Detailed description of the Value for Money framework p. 197
- 9.7 Value for Money and design p. 206
- 9.8 Is there a conflict between Sustainability and Value for Money p. 211
- 9.9 The role of better managed construction in delivering projects on time and within budget p. 213
- 10 Other Economic Analysis Techniques p. 216
- 10.1 Introduction p. 216
- 10.2 Cost effectiveness p. 216
- 10.3 The Planned Balance Sheet p. 220
- 10.4 Hill's Goal Achievement Matrix p. 227

- 10.5 Summary p. 239
- Part 2 Non-Economic-Based Project Appraisal Techniques p. 241
- 11 Multicriteria Analysis p. 243
- 11.1 Introduction p. 243
- 11.2 Multicriteria evaluation models p. 244
- 11.3 Simple non-compensatory methods p. 246
- 11.4 Summary, 255 12 The Simple Additive Model p. 257
- 12.1 Background p. 257
- 12.2 Introduction to the Simple Additive Weighting (SAW) Method p. 259
- 12.3 Sensitivity testing p. 261
- 12.4 Probabilistic Additive Weighting p. 264
- 12.5 Assigning weights to the decision criteria p. 270
- 12.6 Checklists p. 282
- 12.7 Case Study: Using the Simple Additive Weighting Model to choose the best transport strategy for a major urban centre p. 292
- 12.8 Summary p. 298
- 13 Analytic Hierarchy Process (AHP) p. 300
- 13.1 Introduction p. 300
- 13.2 Hierarchies p. 301
- 13.3 Establishing priorities within hierarchies p. 301
- 13.4 Establishing and calculating priorities p. 303
- 13.5 Relationship between AHP and the Simple Additive Weighting (SAW) model p. 316
- 13.6 Summary p. 316
- 14 Concordance Techniques p. 318
- 14.1 Introduction p. 318
- 14.2 Concordance Analysis p. 319
- 14.3 PROMETHEE I and II p. 321
- 14.4 ELECTRE I p. 328
- 14.5 Other Concordance Models p. 331
- 14.6 Summary p. 339
- 15 Concluding Comments p. 343
- 15.1 Introduction p. 343
- 15.2 Which project appraisal technique should one use? p. 343
- 15.3 Future challenges p. 344
- References p. 345
- Interest Factor Tables p. 346
- Index p. 368
