

Table of contents provided by Syndetics

- **Introduction and Preface** (p. xi)
- **1 Probability** (p. 1)
 - **1.1 Probabilities and Events** (p. 1)
 - **1.2 Conditional Probability** (p. 5)
 - **1.3 Random Variables and Expected Values** (p. 9)
 - **1.4 Covariance and Correlation** (p. 14)
 - **1.5 Conditional Expectation** (p. 16)
 - **1.6 Exercises** (p. 17)
- **2 Normal Random Variables** (p. 22)
 - **2.1 Continuous Random Variables** (p. 22)
 - **2.2 Normal Random Variables** (p. 22)
 - **2.3 Properties of Normal Random Variables** (p. 26)
 - **2.4 The Central Limit Theorem** (p. 29)
 - **2.5 Exercises** (p. 31)
- **3 Brownian Motion and Geometric Brownian Motion** (p. 34)
 - **3.1 Brownian Motion** (p. 34)
 - **3.2 Brownian Motion as a Limit of Simpler Models** (p. 35)
 - **3.3 Geometric Brownian Motion** (p. 38)
 - **3.3.1 Geometric Brownian Motion as a Limit of Simpler Models** (p. 40)
 - **3.4 *The Maximum Variable** (p. 40)
 - **3.5 The Cameron-Martin Theorem** (p. 45)
 - **3.6 Exercises** (p. 46)
- **4 Interest Rates and Present Value Analysis** (p. 48)
 - **4.1 Interest Rates** (p. 48)
 - **4.2 Present Value Analysis** (p. 52)
 - **4.3 Rate of Return** (p. 62)
 - **4.4 Continuously Varying Interest Rates** (p. 65)
 - **4.5 Exercises** (p. 67)
- **5 Pricing Contracts via Arbitrage** (p. 73)
 - **5.1 An Example in Options Pricing** (p. 73)
 - **5.2 Other Examples of Pricing via Arbitrage** (p. 77)
 - **5.3 Exercises** (p. 86)
- **6 The Arbitrage Theorem** (p. 92)
 - **6.1 The Arbitrage Theorem** (p. 92)
 - **6.2 The Multiperiod Binomial Model** (p. 96)
 - **6.3 Proof of the Arbitrage Theorem** (p. 98)
 - **6.4 Exercises** (p. 102)
- **7 The Black-Scholes Formula** (p. 106)
 - **7.1 Introduction** (p. 106)
 - **7.2 The Black-Scholes Formula** (p. 106)
 - **7.3 Properties of the Black-Scholes Option Cost** (p. 110)
 - **7.4 The Delta Hedging Arbitrage Strategy** (p. 113)
 - **7.5 Some Derivations** (p. 118)
 - **7.5.1 The Black-Scholes Formula** (p. 119)

- **7.5.2 The Partial Derivatives** (p. 121)
- **7.6 European Put Options** (p. 126)
- **7.7 Exercises** (p. 127)
- **8 Additional Results on Options** (p. 131)
- **8.1 Introduction** (p. 131)
- **8.2 Call Options on Dividend-Paying Securities** (p. 131)
- **8.2.1 The Dividend for Each Share of the Security Is Paid Continuously in Time at a Rate Equal to a Fixed Fraction f of the Price of the Security** (p. 132)
- **8.2.2 For Each Share Owned, a Single Payment of $fS(t, d)$ Is Made at Time t, d** (p. 133)
- **8.2.3 For Each Share Owned, a Fixed Amount D Is to Be Paid at Time t, d** (p. 134)
- **8.3 Pricing American Put Options** (p. 134)
- **8.4 Adding Jumps to Geometric Brownian Motion** (p. 142)
- **8.4.1 When the Jump Distribution Is Lognormal** (p. 144)
- **8.4.2 When the Jump Distribution Is General** (p. 146)
- **8.5 Estimating the Volatility Parameter** (p. 148)
- **8.5.1 Estimating a Population Mean and Variance** (p. 149)
- **8.5.2 The Standard Estimator of Volatility** (p. 150)
- **8.5.3 Using Opening and Closing Data** (p. 152)
- **8.5.4 Using Opening, Closing, and High-Low Data** (p. 153)
- **8.6 Some Comments** (p. 155)
- **8.6.1 When the Option Cost Differs from the Black-Scholes Formula** (p. 155)
- **8.6.2 When the Interest Rate Changes** (p. 156)
- **8.6.3 Final Comments** (p. 156)
- **8.7 Appendix** (p. 158)
- **8.8 Exercises** (p. 159)
- **9 Valuing by Expected Utility** (p. 165)
- **9.1 Limitations of Arbitrage Pricing** (p. 165)
- **9.2 Valuing Investments by Expected Utility** (p. 166)
- **9.3 The Portfolio Selection Problem** (p. 174)
- **9.3.1 Estimating Covariances** (p. 184)
- **9.4 Value at Risk and Conditional Value at Risk** (p. 184)
- **9.5 The Capital Assets Pricing Model** (p. 187)
- **9.6 Rates of Return: Single-Period and Geometric Brownian Motion** (p. 188)
- **9.7 Exercises** (p. 190)
- **10 Stochastic Order Relations** (p. 193)
- **10.1 First-Order Stochastic Dominance** (p. 193)
- **10.2 Using Coupling to Show Stochastic Dominance** (p. 196)
- **10.3 Likelihood Ratio Ordering** (p. 198)
- **10.4 A Single-Period Investment Problem** (p. 199)
- **10.5 Second-Order Dominance** (p. 203)
- **10.5.1 Normal Random Variables** (p. 204)
- **10.5.2 More on Second-Order Dominance** (p. 207)
- **10.6 Exercises** (p. 210)
- **11 Optimization Models** (p. 212)
- **11.1 Introduction** (p. 212)

- **11.2 A Deterministic Optimization Model** (p. 212)
- **11.2.1 A General Solution Technique Based on Dynamic Programming** (p. 213)
- **11.2.2 A Solution Technique for Concave Return Functions** (p. 215)
- **11.2.3 The Knapsack Problem** (p. 219)
- **11.3 Probabilistic Optimization Problems** (p. 221)
- **11.3.1 A Gambling Model with Unknown Win Probabilities** (p. 221)
- **11.3.2 An Investment Allocation Model** (p. 222)
- **11.4 Exercises** (p. 225)
- **12 Stochastic Dynamic Programming** (p. 228)
- **12.1 The Stochastic Dynamic Programming Problem** (p. 228)
- **12.2 Infinite Time Models** (p. 234)
- **12.3 Optimal Stopping Problems** (p. 239)
- **12.4 Exercises** (p. 244)
- **13 Exotic Options** (p. 247)
- **13.1 Introduction** (p. 247)
- **13.2 Barrier Options** (p. 247)
- **13.3 Asian and Lookback Options** (p. 248)
- **13.4 Monte Carlo Simulation** (p. 249)
- **13.5 Pricing Exotic Options by Simulation** (p. 250)
- **13.6 More Efficient Simulation Estimators** (p. 252)
- **13.6.1 Control and Antithetic Variables in the Simulation of Asian and Lookback Option Valuations** (p. 253)
- **13.6.2 Combining Conditional Expectation and Importance Sampling in the Simulation of Barrier Option Valuations** (p. 257)
- **13.7 Options with Nonlinear Payoffs** (p. 258)
- **13.8 Pricing Approximations via Multiperiod Binomial Models** (p. 259)
- **13.9 Continuous Time Approximations of Barrier and Lookback Options** (p. 261)
- **13.10 Exercises** (p. 262)
- **14 Beyond Geometric Brownian Motion Models** (p. 265)
- **14.1 Introduction** (p. 265)
- **14.2 Crude Oil Data** (p. 266)
- **14.3 Models for the Crude Oil Data** (p. 272)
- **14.4 Final Comments** (p. 274)
- **15 Autoregressive Models and Mean Reversion** (p. 285)
- **15.1 The Autoregressive Model** (p. 285)
- **15.2 Valuing Options by Their Expected Return** (p. 286)
- **15.3 Mean Reversion** (p. 289)
- **15.4 Exercises** (p. 291)
- **Index** (p. 303)
