Praise for Head First HTML and CSS

More Praise for Head First HTML and CSS

Praise for other books by Eric Freeman and Elisabeth Robson

Authors of Head First HTML and CSS

How to Use This Book: Intro

Who is this book for?

We know what you're thinking

Metacognition: thinking about thinking

Here's what WE did

Here's what YOU can do to bend your brain into submission

Tech reviewers (first edition)

Acknowledgments (first edition) The large number of acknowledgments is because we're testing the theory that everyone mentioned in a book acknowledgment will buy at least one copy, probably more, what with relatives and everything. If you'd like to be in the acknowledgment of our next book, and you have a large family, write to us.

Chapter 1 Getting to Know HTML: The Language of the Web

1.2 What does the web server do?

1.3 What does the web browser do?

1.4 What you write (the HTML)

1.5 What the browser creates

1.6 Your big break at Starbuzz Coffee

- 1.7 Creating the Starbuzz web page
- 1.8 Creating an HTML file (Mac)
- 1.9 Creating an HTML file (Windows)
- 1.10 Meanwhile, back at Starbuzz Coffee...
- 1.11 Saving your work
- 1.12 Opening your web page in a browser
- 1.13 Take your page for a test drive
- 1.14 Are we there yet?
- 1.15 Another test drive
- 1.17 Meet the style element
- 1.18 Giving Starbuzz some style...
- 1.19 Cruisin' with style...

Chapter 2 Going Further with Hypertext: Meeting the "HT" in HTML

- 2.1 Head First Lounge, new and improved
- 2.2 Creating the new lounge
- 2.3 What did we do?
- 2.4 Understanding attributes
- 2.5 Getting organized
- 2.6 Organizing the lounge...
- 2.7 Technical difficulties
- 2.8 Planning your paths...
- 2.9 Fixing those broken images...

Chapter 3 Building Blocks: Web Page Construction

- 3.1 From journal to website, at 12 mph
- 3.2 The rough design sketch

- 3.3 From a sketch to an outline
- 3.4 From the outline to a web page
- 3.5 Test driving Tony's web page
- 3.6 Adding some new elements
- 3.7 Meet the element
- 3.8 Looooong quotes
- 3.9 Adding a
- 3.10 The real truth behind the and mystery
- 3.11 Meanwhile, back at Tony's site...
- 3.12 Of course, you could use the element to make a list...
- 3.13 Constructing HTML lists in two easy steps
- 3.14 Taking a test drive through the cities
- 3.15 Putting one element inside another is called "nesting"
- 3.16 To understand the nesting relationships, draw a picture
- 3.17 Using nesting to make sure your tags match

Chapter 4 Getting Connected: A Trip to Webville

- 4.1 Getting Starbuzz (or yourself) onto the Web
- 4.2 Finding a hosting company
- 4.3 HELLO, my domain name is...
- 4.4 How can you get a domain name?
- 4.5 Moving in
- 4.6 Getting your files to the root folder
- 4.7 As much FTP as you can possibly fit in two pages
- 4.8 Back to business...
- 4.9 Mainstreet, URL

- 4.10 What is HTTP?
- 4.11 What's an absolute path?
- 4.12 How default pages work
- 4.13 How do we link to other websites?
- 4.14 Linking to Caffeine Buzz
- 4.15 And now for the test drive...
- 4.16 Web page fit and finish
- 4.17 The title test drive...
- 4.18 Linking into a page
- 4.19 Using the id attribute to create a destination for
- 4.20 How to link to elements with ids
- 4.21 Linking to a new window
- 4.22 Opening a new window using target

Chapter 5 Adding Images to your Pages: Meeting the Media

- 5.1 How the browser works with images
- 5.2 How images work
- 5.3 : it's not just relative links anymore
- 5.4 Always provide an alternative
- 5.5 Sizing up your images
- 5.6 Creating the ultimate fan site: myPod
- 5.7 Check out myPod's "index.html" file
- 5.8 Whoa! The image is way too large
- 5.9 Resize the image to fit in the browser
- 5.10 Open the image
- 5.11 Resizing the image

- 5.12 You've resized-now save
- 5.13 Save the image
- 5.14 Fixing up the myPod HTML
- 5.15 And now for the test drive...
- 5.16 More photos for myPod
- 5.17 Taking myPod for another test drive
- 5.18 Reworking the site to use thumbnails
- 5.19 Create the thumbnails
- 5.20 Rework the HTML to use the thumbnails
- 5.21 Take myPod for another test drive
- 5.22 Turning the thumbnails into links
- 5.23 Create individual pages for the photos
- 5.24 So, how do I make links out of images?
- 5.25 Add the image links to "index.html"
- 5.26 Open the myPod logo
- 5.27 What format should we use?
- 5.28 To be transparent, or not to be transparent? That is the question...
- 5.29 Save the transparent PNG
- 5.30 Wait, what is the color of the web page background?
- 5.31 Set the matte color
- 5.32 Check out the logo with a matte
- 5.33 Save the logo
- 5.34 Add the logo to the myPod web page
- 5.35 And now for the final test drive

Chapter 6 Standards and All that Jazz: Getting Serious with HTML

6.1 A Brief History of HTML

6.2 The new, and improved, HTML5 doctype

6.3 HTML, the new "living standard"

6.4 Adding the document type definition

6.5 The doctype test drive

6.6 Meet the W3C validator

6.7 Validating the Head First Lounge

6.8 Houston, we have a problem...

6.9 Fixing that error

6.10 We're almost there...

6.11 Adding a meta tag to specify the character encoding

6.12 Making the validator (and more than a few browsers) happy with a tag...

6.13 Third time's the charm?

6.14 Calling all HTML professionals, grab the handbook...

Chapter 7 Getting Started with CSS: Adding a Little Style

7.1 You're not in Kansas anymore

7.2 Overheard on Webville's "Trading Spaces"

7.3 Using CSS with HTML

7.4 Wanna add more style?

7.5 Getting CSS into your HTML

7.6 Adding style to the lounge

7.7 Cruising with style: the test drive

7.8 Style the heading

7.9 Let's put a line under the welcome message too

7.10 We have the technology: specifying a second rule, just for the h1

- 7.11 So, how do selectors really work?
- 7.12 Seeing selectors visually
- 7.13 Getting the lounge style into the elixirs and directions pages
- 7.14 Creating the "lounge.css" file
- 7.15 Linking from "lounge.html" to the external stylesheet
- 7.16 Linking from "elixir.html" and "directions.html" to the external stylesheet
- 7.17 Test driving the entire lounge...
- 7.18 It's time to talk about your inheritance...
- 7.19 What if we move the font up the family tree?
- 7.20 Test drive your new CSS
- 7.21 Overriding inheritance
- 7.22 Test drive
- 7.23 Adding an element to the greentea class
- 7.24 Creating a class selector
- 7.25 A greentea test drive
- 7.26 Taking classes further...
- 7.27 The world's smallest and fastest guide to how styles are applied
- 7.28 Making sure the lounge CSS validates

Chapter 8 Styling with Fonts and Colors: Expanding Your Vocabulary

- 8.1 Text and fonts from 30,000 feet
- 8.2 What is a font family anyway?
- 8.3 Specifying font families using CSS
- 8.4 How font-family specifications work
- 8.5 Dusting off Tony's journal
- 8.6 Getting Tony a new font-family

- 8.7 Test driving Tony's new fonts
- 8.8 How do I deal with everyone having different fonts?
- 8.9 How Web Fonts work
- 8.10 How to add a Web Font to your page...
- 8.11 Test drive the Web Font in Tony's journal
- 8.12 Adjusting font sizes
- 8.13 So, how should I specify my font sizes?
- 8.14 Let's make these changes to the font sizes in Tony's web page
- 8.15 Test driving the font sizes
- 8.16 Changing a font's weight
- 8.17 Test drive the normal-weight headings
- 8.18 Adding style to your fonts
- 8.19 Styling Tony's quotes with a little italic
- 8.20 How do web colors work?
- 8.21 How do I specify web colors? Let me count the ways...
- 8.22 The two-minute guide to hex codes
- 8.23 How to find web colors
- 8.24 Back to Tony's page...we're going to make the headings orange, and add an underline too
- 8.25 Test drive Tony's orange headings
- 8.26 Everything you ever wanted to know about text decorations in less than one page
- 8.27 Removing the underline...

Chapter 9 The Box Model: Getting Intimate with Elements

- 9.1 The lounge gets an upgrade
- 9.2 The new and improved, ultra-stylish lounge
- 9.3 Setting up the new lounge

- 9.4 Starting with a few simple upgrades
- 9.5 A very quick test drive
- 9.6 One more adjustment
- 9.7 Checking out the new line height
- 9.8 Getting ready for some major renovations
- 9.9 A closer look at the box model
- 9.10 What you can do to boxes
- 9.11 Meanwhile, back at the lounge...
- 9.12 Creating the guarantee style
- 9.13 A test drive of the paragraph border
- 9.14 Padding, border, and margins for the guarantee
- 9.15 Adding some padding
- 9.16 A test drive with some padding
- 9.17 Now let's add some margin
- 9.18 A test drive with the margin
- 9.19 Adding a background image
- 9.20 Test driving the background image
- 9.21 Fixing the background image
- 9.22 Another test drive of the background image
- 9.23 How do you add padding only on the left?
- 9.24 Are we there yet?
- 9.25 How do you increase the margin just on the right?
- 9.26 A two-minute guide to borders
- 9.27 Border fit and finish
- 9.28 Congratulations!

9.29 The id attribute

9.30 But how do I use id in CSS?

9.31 Using an id in the lounge

9.32 Remixing stylesheets

9.33 Using multiple stylesheets

9.34 Stylesheets-they're not just for desktop browsers anymore...

9.35 Add media queries right into your CSS

Chapter 10 Divs and Spans: Advanced Web Construction

10.1 A close look at the elixirs HTML

10.2 Let's explore how we can divide a page into logical sections

10.3 Meanwhile, back at the lounge...

10.4 Taking the for a test drive

10.5 Adding a border

10.6 An over-the-border test drive

10.7 Adding some real style to the elixirs section

10.8 The game plan

10.9 Working on the elixir width

10.10 Test driving the width

10.11 Adding the basic styles to the elixirs

10.12 Test driving the new styles

10.13 We're almost there...

10.14 What are we trying to do?

10.15 What we need is a way to select descendants

10.16 Changing the color of the elixir headings

10.17 A quick test drive...

- 10.18 Fixing the line height
- 10.19 Look what you've accomplished...
- 10.20 It's time to take a little shortcut
- 10.21 But there's more...
- 10.22 And even more shorthands
- 10.23 Adding s in three easy steps
- 10.24 Steps one and two: Adding the s
- 10.25 Step three: Styling the s
- 10.26 Test driving the spans
- 10.27 The element and its multiple personalities
- 10.28 How can you style elements based on their state?
- 10.29 Putting those pseudo-classes to work
- 10.30 Test drive the links
- 10.31 Isn't it about time we talk about the "cascade"?
- 10.32 The cascade
- 10.33 Welcome to the "What's my specificity?" game
- 10.34 Putting it all together

Chapter 11 Layout and Positioning: Arranging Elements

- 11.1 Did you do the Super Brain Power?
- 11.2 Use the Flow, Luke
- 11.4 How it all works together
- 11.5 One more thing you should know about flow and boxes
- 1.1 The Web Video killed the radio star
- 1.16 Tags dissected
- 11.3 What about inline elements?

11.6 How to float an element

11.7 Behind the scenes at the lounge

11.8 The new Starbuzz

11.9 A look at the markup

11.11 Let's take Starbuzz to the next level

11.12 Move the sidebar just below the header

11.10 And a look at the style

11.13 Set the width of the sidebar and float it

11.14 Test driving Starbuzz

11.15 Fixing the two-column problem

11.16 Setting the margin on the main section

11.17 Test drive

11.18 Uh oh, we have another problem

11.19 Solving the overlap problem

11.20 Test drive

11.21 Righty tighty, lefty loosey

11.22 A quick test drive

11.23 Liquid and frozen designs

11.24 A frozen test drive

11.25 What's the state between liquid and frozen? Jello, of course!

11.26 Test driving with a tank of jello

11.27 How absolute positioning works

11.28 Another example of absolute positioning

11.29 Using absolute positioning

11.30 Changing the Starbuzz CSS

11.31 Now we just need to rework the main

11.32 Time for the absolute test drive

11.33 How CSS table display works

11.34 How to create the CSS and HTML for a table display

11.35 Adding HTML structure for the table display

11.36 How to use CSS to create table displays

11.37 Meanwhile, back at Starbuzz...

11.38 A quick test drive...

11.39 What's the problem with the spacing?

11.40 Fix the spacing

11.41 A final test drive of our table display

11.42 Strategies for your CSS layout toolbox

11.43 Problems with the header

11.44 Fixing the header images with float

11.45 Test drive your float

11.46 Adding the award

11.47 Positioning the award

11.48 How does fixed positioning work?

11.49 Putting the coupon on the page

11.50 Putting the coupon on the page

11.51 Using a negative left property value

11.52 A rather positive, negative test drive

Chapter 12 HTML5 Markup: Modern HTML

12.1 Rethinking HTML structure

12.2 Modern Starbuzz

12.3 Update your Starbuzz HTML

12.4 Test driving the new ride

12.5 Before you continue...

12.6 How to update your CSS for the new elements

12.7 Test drive #2

12.8 Building the Starbuzz blog page

12.9 Setting up the CSS for the blog page

12.10 Test drive the blog page

12.11 We still need to add a date to the blog...

12.12 Adding the element to your blog

12.13 How to add more elements

12.15 So, what's wrong with the header anyway?

12.16 A final test drive for the headers

12.17 Completing the navigation

12.18 Adding the navigation CSS

12.19 Who needs GPS? Giving the navigation a test drive

12.20 Adding a element...

12.21 Making our CSS more specific...

12.22 Ta-da! Look at that navigation!

12.23 Creating the new blog entry

12.25 Lights, camera, action...

12.26 How does the element work?

12.27 Closely inspecting the video attributes...

12.28 What you need to know about video formats

12.29 The video format contenders

12.14 Testing the header

12.24 And now, introducing the element

12.30 How to juggle all those formats...

12.31 Take 2: lights, camera, action...

12.32 How to be even more specific with your video formats

12.33 Update and test drive

Chapter 13 Tables and More Lists: Getting Tabular

13.1 How do you make tables with HTML?

13.2 Creating a table with HTML

13.3 What the browser creates

13.4 Tables dissected

13.5 Adding a caption

13.6 Test drive...and start thinking about style

13.7 Before we start styling, let's get the table into Tony's page

13.8 Now let's style the table

13.9 Taking the styled tables for a test drive

13.10 Getting those borders to collapse

13.11 How about some color?

13.12 How about some color in the table rows?

13.13 Did we mention that Tony made an interesting discovery in Truth or Consequences, New Mexico?

13.14 Another look at Tony's table

13.15 How to tell cells to span more than one row

13.16 Test drive the table

13.17 Trouble in paradise?

13.18 Test driving the nested table

13.19 Overriding the CSS for the nested table headings

13.20 Giving Tony's site the final polish

13.21 Giving the list some style

13.22 What if you want a custom marker?

Chapter 14 HTML Forms: Getting Interactive

14.1 How forms work

14.2 How forms work in the browser

14.3 What you write in HTML

14.4 What the browser creates

14.5 How the element works

14.6 What can go in a form?

14.7 What can go in a form? (part 2)

14.8 Oh, even more can go in a form!

14.9 Getting ready to build the Bean Machine form

14.10 Figuring out what goes in the form element

14.11 Adding the element

14.12 How form element names work

14.13 Back to getting those input elements into your HTML

14.14 A form-al test drive

14.15 Adding some more input elements to your form

14.16 Adding the select element

14.17 Test driving the element

14.18 Give the customer a choice of whole or ground beans

14.19 Punching the radio buttons

14.20 Using more input types

14.21 Adding the number and date input types

14.22 Test driving the number and date input elements

14.23 Completing the form

14.24 Adding the checkboxes and text area

14.25 The final form test drive

14.26 Watching GET in action

14.27 Getting the form elements into HTML structure for table display layout

14.28 Styling the form with CSS

14.29 Test drive the styled form

14.30 A word about accessibility

14.31 What more could possibly go into a form?

14.32 More things that can go in a form

14.33 Congratulations! You made it to the end;Leftovers: The Top Ten Topics (We Didn't Cover)

#1 More CSS selectors

#2 Vendor-specific CSS properties

#3 CSS transforms and transitions

#4 Interactivity

#5 HTML5 APIs and web apps

#6 More on Web Fonts

#7 Tools for creating web pages

#8 XHTML5

#9 Server-side scripting

#10 Audio;This isn't goodbye

Colophon
