

Table of Contents

- Preface p. xix
- Author p. xxi
- Chapter 1 Introduction p. 1
 - 1.1 Principal Areas of Biomechanics p. 1
 - 1.2 Approach in This Book p. 2
 - References p. 2
- Chapter 2 Review of Human Anatomy and Some Basic Terminology p. 7
 - 2.1 Gross (Whole-Body) Modeling p. 7
 - 2.2 Position and Direction Terminology p. 10
 - 2.3 Terminology for Common Movements p. 14
 - 2.4 Skeletal Anatomy p. 19
 - 2.5 Major Joints p. 22
 - 2.6 Major Muscle Groups p. 23
 - 2.7 Anthropometric Data p. 24
 - References p. 26
- Chapter 3 Methods of Analysis I: Review of Vectors, Dyadics, Matrices, and Determinants p. 29
 - 3.1 Vectors p. 29
 - 3.2 Vector Algebra: Addition and Multiplication by Scalars p. 30
 - 3.2.1 Vector Characteristics p. 30
 - 3.2.2 Equality of Vectors p. 30
 - 3.2.3 Special Vectors p. 30
 - 3.2.4 Multiplication of Vectors and Scalars p. 31
 - 3.2.5 Vector Addition p. 32
 - 3.2.6 Addition of Perpendicular Vectors p. 33
 - 3.2.7 Use of Index and Summation Notations p. 36
 - 3.3 Vector Algebra: Multiplication of Vectors p. 37
 - 3.3.1 Angle between Vectors p. 37
 - 3.3.2 Scalar Product p. 37
 - 3.3.3 Vector Product p. 39
 - 3.3.4 Dyadic Product p. 41
 - 3.4 Dyadics p. 42
 - 3.4.1 Zero Dyadic p. 42
 - 3.4.2 Identity Dyadic p. 42
 - 3.4.3 Dyadic Transpose p. 43
 - 3.4.4 Symmetric Dyadics p. 43
 - 3.4.5 Multiplication of Dyadics p. 43
 - 3.4.6 Inverse Dyadics p. 44
 - 3.4.7 Orthogonal Dyadics p. 44
 - 3.5 Multiple Products of Vectors p. 44
 - 3.5.1 Scalar Triple Product p. 45
 - 3.5.2 Vector Triple Product p. 46
 - 3.5.3 Dyadic/Vector Product p. 47
 - 3.5.4 Other Multiple Products p. 48

- 3.6 Matrices/Arrays p. 48
- 3.6.1 Zero Matrices p. 49
- 3.6.2 Identity Matrices p. 49
- 3.6.3 Matrix Transpose p. 49
- 3.6.4 Equal Matrices p. 49
- 3.6.5 Symmetric Matrices p. 49
- 3.6.6 Skew-Symmetric Matrices p. 50
- 3.6.7 Diagonal Matrix p. 50
- 3.6.8 Matrix Measures p. 50
- 3.6.9 Singular Matrices p. 50
- 3.6.10 Multiplication of Matrices by Scalars p. 50
- 3.6.11 Addition of Matrices p. 50
- 3.6.12 Multiplication of Matrices p. 51
- 3.6.13 Inverse Matrices p. 51
- 3.6.14 Orthogonal Matrices p. 52
- 3.6.15 Submatrices p. 52
- 3.6.16 Rank p. 52
- 3.6.17 Partitioning of Matrices, Block-Multiplication p. 52
- 3.6.18 Pseudoinverse p. 53
- 3.7 Determinants p. 53
- 3.8 Relationship of 3 x 3 Determinants, Permutation Symbols, and Kronecker Delta Functions p. 55
- 3.9 Eigenvalues, Eigenvectors, and Principal Directions p. 59
- 3.10 Maximum and Minimum Eigenvalues and the Associated Eigenvectors p. 65
- References p. 66
- Bibliography p. 66
- Chapter 4 Methods of Analysis II: Forces and Force Systems p. 69
- 4.1 Forces: Vector Representations p. 69
- 4.2 Moments of Forces p. 69
- 4.3 Moments of Forces about Lines p. 70
- 4.4 Systems of Forces p. 71
- 4.5 Special Force Systems p. 73
- 4.5.1 Zero Force Systems p. 73
- 4.5.2 Couples p. 74
- 4.5.3 Equivalent Force Systems p. 74
- 4.5.4 Superimposed and Negative Force Systems p. 77
- 4.6 Principle of Action-Reaction p. 77
- References p. 78
- Chapter 5 Methods of Analysis III: Mechanics of Materials p. 79
- 5.1 Concepts of Stress p. 79
- 5.2 Concepts of Strain p. 84
- 5.3 Principal Values of Stress and Strain p. 88
- 5.4 A Two-Dimensional Example: Mohr's Circle p. 89
- 5.5 Elementary Stress-Strain Relations p. 94
- 5.6 General Stress-Strain (Constitutive) Relations p. 97
- 5.7 Equations of Equilibrium and Compatibility p. 99

- 5.8 Use of Curvilinear Coordinates p. 102
- 5.8.1 Cylindrical Coordinates p. 102
- 5.8.2 Spherical Coordinates p. 103
- 5.9 Review of Elementary Beam Theory p. 105
- 5.9.1 Sign Convention p. 105
- 5.9.2 Equilibrium Consideration p. 106
- 5.9.3 Strain-Curvature Relations p. 107
- 5.9.4 Stress-Bending Moment Relations p. 109
- 5.9.5 Summary of Governing Equations p. 110
- 5.10 Thick Beams p. 111
- 5.11 Curved Beams p. 114
- 5.12 Singularity Functions p. 115
- 5.13 Elementary Illustrative Examples p. 117
- 5.13.1 Cantilever Beam with a Concentrated End Load p. 117
- 5.13.2 Cantilever Beam with a Concentrated End Load on the Right End p. 120
- 5.13.3 Simply Supported Beam with a Concentrated Interior Span Load p. 122
- 5.13.4 Simply Supported Beam with Uniform Load p. 125
- 5.14 Listing of Selected Beam Displacement and Bending Moment Results p. 128
- 5.15 Magnitude of Transverse Shear Stress p. 129
- 5.16 Torsion of Bars p. 130
- 5.17 Torsion of Members with Noncircular and Thin-Walled Cross Sections p. 132
- 5.18 Energy Methods p. 133
- References p. 139
- Chapter 6 Methods of Analysis IV: Modeling of Biosystems p. 141
- 6.1 Multibody (Lumped Mass) Systems p. 141
- 6.2 Lower Body Arrays p. 142
- 6.3 Whole Body, Head/Neck, and Hand Models p. 146
- 6.4 Gross-Motion Modeling of Flexible Systems p. 150
- References p. 151
- Chapter 7 Tissue Biomechanics p. 153
- 7.1 Hard and Soft Tissue p. 153
- 7.2 Bones p. 154
- 7.3 Bone Cells and Microstructure p. 154
- 7.4 Physical Properties of Bone p. 155
- 7.5 Bone Development (Wolff's law) p. 156
- 7.6 Bone Failure (Fracture and Osteoporosis) p. 157
- 7.7 Muscle Tissue p. 158
- 7.8 Cartilage p. 159
- 7.9 Ligaments/Tendons p. 160
- 7.10 Scalp, Skull, and Brain Tissue p. 161
- 7.11 Skin Tissue p. 162
- References p. 163
- Chapter 8 Kinematical Preliminaries: Fundamental Equations p. 165
- 8.1 Points, Particles, and Bodies p. 165
- 8.2 Particle, Position, and Reference Frames p. 166
- 8.3 Particle Velocity p. 166

- 8.4 Particle Acceleration p. 167
- 8.5 Absolute and Relative Velocity and Acceleration p. 169
- 8.6 Vector Differentiation, Angular Velocity p. 171
- 8.7 Two Useful Kinematic Procedures p. 176
- 8.7.1 Differentiation in Different Reference Frames p. 176
- 8.7.2 Addition Theorem for Angular Velocity p. 178
- 8.8 Configuration Graphs p. 180
- 8.9 Use of Configuration Graphs to Determine Angular Velocity p. 190
- 8.10 Application with Biosystems p. 192
- 8.11 Angular Acceleration p. 195
- 8.12 Transformation Matrix Derivatives p. 197
- 8.13 Relative Velocity and Acceleration of Two Points Fixed on a Body p. 199
- 8.14 Singularities Occurring with Angular Velocity Components and Orientation Angles p. 200
- 8.15 Rotation Dyadics p. 201
- 8.16 Euler Parameters p. 206
- 8.17 Euler Parameters and Angular Velocity p. 208
- 8.18 Inverse Relations between Angular Velocity and Euler Parameters p. 210
- 8.19 Numerical Integration of Governing Dynamical Equations p. 212
- References p. 213
- Chapter 9 Kinematic Preliminaries: Inertia Force Considerations p. 215
- 9.1 Applied Forces and Inertia Forces p. 215
- 9.2 Mass Center p. 217
- 9.3 Equivalent Inertia Force Systems p. 221
- Chapter 10 Human Body Inertia Properties p. 225
- 10.1 Second Moment Vectors, Moments, and Products of Inertia p. 225
- 10.2 Inertia Dyadics p. 229
- 10.3 Sets of Particles p. 230
- 10.4 Body Segments p. 232
- 10.5 Parallel Axis Theorem p. 234
- 10.6 Eigenvalues of Inertia: Principal Directions p. 237
- 10.7 Eigenvalues of Inertia: Symmetrical Bodies p. 241
- 10.8 Application with Human Body Models p. 243
- References p. 256
- Chapter 11 Kinematics of Human Body Models p. 257
- 11.1 Notation, Degrees of Freedom, and Coordinates p. 257
- 11.2 Angular Velocities p. 261
- 11.3 Generalized Coordinates p. 266
- 11.4 Partial Angular Velocities p. 268
- 11.5 Transformation Matrices: Recursive Formulation p. 270
- 11.6 Generalized Speeds p. 273
- 11.7 Angular Velocities and Generalized Speeds p. 276
- 11.8 Angular Acceleration p. 279
- 11.9 Mass Center Positions p. 282
- 11.10 Mass Center Velocities p. 288
- 11.11 Mass Center Accelerations p. 290

- 11.12 Summary: Human Body Model Kinematics p. 291
- References p. 293
- Chapter 12 Kinetics of Human Body Models p. 295
- 12.1 Applied (Active) and Inertia (Passive) Forces p. 295
- 12.2 Generalized Forces p. 297
- 12.3 Generalized Applied (Active) Forces on a Human Body Model p. 299
- 12.4 Forces Exerted across Articulating Joints p. 300
- 12.4.1 Contact Forces across Joints p. 301
- 12.4.2 Ligament and Tendon Forces p. 302
- 12.4.3 Joint Articulation Moments p. 304
- 12.5 Contribution of Gravity (Weight) Forces to the Generalized Active Forces p. 306
- 12.6 Generalized Inertia Forces p. 307
- References p. 309
- Chapter 13 Dynamics of Human Body Models p. 311
- 13.1 Kane's Equations p. 311
- 13.2 Generalized Forces for a Human Body Model p. 312
- 13.3 Dynamical Equations p. 313
- 13.4 Formulation for Numerical Solutions p. 314
- 13.5 Constraint Equations p. 317
- 13.6 Constraint Forces p. 319
- 13.7 Constrained System Dynamics p. 322
- 13.8 Determination of Orthogonal Complement Arrays p. 324
- 13.9 Summary p. 325
- References p. 327
- Chapter 14 Numerical Methods p. 329
- 14.1 Governing Equations p. 329
- 14.2 Numerical Development of the Governing Equations p. 331
- 14.3 Outline of Numerical Procedures p. 332
- 14.4 Algorithm Accuracy and Efficiency p. 333
- References p. 335
- Chapter 15 Simulations and Applications p. 337
- 15.1 Review of Human Modeling for Dynamic Simulation p. 337
- 15.2 A Human Body in Free-Space: A "Spacewalk" p. 339
- 15.2.1 X-Axis (Yaw) Rotation p. 340
- 15.2.2 Y-Axis (Pitch) Rotation p. 340
- 15.2.3 Z-Axis (Roll) Rotation p. 341
- 15.3 A Simple Weight Lift p. 342
- 15.4 Walking p. 344
- 15.4.1 Terminology p. 345
- 15.4.2 Modeling/Simulation p. 345
- 15.4.3 Results p. 346
- 15.5 Swimming p. 347
- 15.5.1 Modeling the Water Forces p. 347
- 15.5.2 Limb Motion Specification p. 348
- 15.5.3 Kick Strokes p. 349
- 15.5.4 Breast Stroke p. 350

- 15.5.5 Comments p. 350
- 15.6 Crash Victim Simulation I: Modeling p. 350
- 15.7 Crash Victim Simulation II: Vehicle Environment Modeling p. 351
- 15.8 Crash Victim Simulation III: Numerical Analysis p. 353
- 15.9 Burden Bearing-Waiter/Tray Simulations p. 354
- 15.9.1 Heavy Hanging Cable p. 354
- 15.9.2 Uniform Muscle Stress Criterion p. 356
- 15.9.3 Waitron/Tray Analysis p. 357
- 15.10 Other Applications p. 359
- 15.10.1 Load Sharing between Muscle Groups p. 360
- 15.10.2 Transition Movements p. 361
- 15.10.3 Gyroscopic Effects in Walking p. 361
- 15.10.4 Neck Injuries in Rollover Motor Vehicle Accidents p. 362
- References p. 362
- Appendix Anthropometric Data Tables p. 367
- Glossary p. 403
- Bibliography p. 415
- Index p. 419
