

- Preface p. ix
- Acknowledgments p. xi
- 1 Introduction p. 1
- 1.1 Introduction p. 1
- 1.1.1 Overview p. 1
- 1.1.2 Models in seismology p. 5
- 1.2 Seismology and society p. 9
- 1.2.1 Seismic hazards and risks p. 11
- 1.2.2 Engineering seismology and earthquake engineering p. 14
- 1.2.3 Highways, bridges, dams, and pipelines p. 18
- 1.2.4 Tsunamis, landslides, and soil liquefaction p. 19
- 1.2.5 Earthquake forecasting p. 20
- 1.2.6 Earthquake prediction p. 24
- 1.2.7 Real-time warnings p. 26
- 1.2.8 Nuclear monitoring and treaty verification p. 26
- Further reading p. 28
- 2 Basic Seismological Theory p. 29
- 2.1 Introduction p. 29
- 2.2 Waves on a string p. 29
- 2.2.1 Theory p. 29
- 2.2.2 Harmonic wave solution p. 31
- 2.2.3 Reflection and transmission p. 32
- 2.2.4 Energy in a harmonic wave p. 35
- 2.2.5 Normal modes of a string p. 36
- 2.3 Stress and strain p. 38
- 2.3.1 Introduction p. 38
- 2.3.2 Stress p. 39
- 2.3.3 Stress as a tensor p. 41
- 2.3.4 Principal stresses p. 42
- 2.3.5 Maximum shear stress and faulting p. 43
- 2.3.6 Deviatoric stresses p. 45
- 2.3.7 Equation of motion p. 46
- 2.3.8 Strain p. 47
- 2.3.9 Constitutive equations p. 48
- 2.3.10 Boundary conditions p. 51
- 2.3.11 Strain energy p. 52
- 2.4 Seismic waves p. 53
- 2.4.1 The seismic wave equation p. 53
- 2.4.2 Plane waves p. 54
- 2.4.3 Spherical waves p. 55
- 2.4.4 P and S waves p. 56
- 2.4.5 Energy in a plane wave p. 61
- 2.5 Snell's law p. 62
- 2.5.1 The layered medium approximation p. 62

- 2.5.2 Plane wave potentials for a layered medium p. 63
- 2.5.3 Angle of incidence and apparent velocity p. 65
- 2.5.4 Snell's law p. 66
- 2.5.5 Critical angle p. 67
- 2.5.6 Snell's law for SH waves p. 68
- 2.5.7 Ray parameter and slowness p. 69
- 2.5.8 Waveguides p. 70
- 2.5.9 Fermat's principle and geometric ray theory p. 70
- 2.5.10 Huygens' principle and diffraction p. 72
- 2.6 Plane wave reflection and transmission coefficients p. 75
- 2.6.1 Introduction p. 75
- 2.6.2 SH wave reflection and transmission coefficients p. 76
- 2.6.3 Energy flux for reflected and transmitted SH waves p. 77
- 2.6.4 Postcritical SH waves p. 78
- 2.6.5 P-SV waves at a free surface p. 79
- 2.6.6 Solid-solid and solid-liquid interfaces p. 81
- 2.6.7 Examples p. 85
- 2.7 Surface waves p. 86
- 2.7.1 Introduction p. 86
- 2.7.2 Rayleigh waves in a homogeneous halfspace p. 87
- 2.7.3 Love waves in a layer over a halfspace p. 90
- 2.7.4 Love wave dispersion p. 91
- 2.8 Dispersion p. 93
- 2.8.1 Phase and group velocity p. 93
- 2.8.2 Dispersive signals p. 94
- 2.8.3 Surface wave dispersion studies p. 96
- 2.8.4 Tsunami dispersion p. 99
- 2.9 Normal modes of the earth p. 101
- 2.9.1 Motivation p. 101
- 2.9.2 Modes of a sphere p. 101
- 2.9.3 Spherical harmonics p. 103
- 2.9.4 Torsional modes p. 104
- 2.9.5 Spheroidal modes p. 106
- 2.9.6 Modes and propagating waves p. 106
- 2.9.7 Observing normal modes p. 110
- 2.9.8 Normal mode synthetic seismograms p. 111
- 2.9.9 Mode attenuation, splitting, and coupling p. 111
- Further reading p. 115
- Problems p. 116
- 3 Seismology and Earth Structure p. 119
- 3.1 Introduction p. 119
- 3.2 Refraction seismology p. 120
- 3.2.1 Flat layer method p. 120
- 3.2.2 Dipping layer method p. 123

- 3.2.3 Advanced analysis methods p. 126
- 3.2.4 Crustal structure p. 128
- 3.2.5 Rocks and minerals p. 132
- 3.3 Reflection seismology p. 134
- 3.3.1 Travel time curves for reflections p. 134
- 3.3.2 Intercept-slowness formulation for travel times p. 137
- 3.3.3 Multichannel data geometry p. 140
- 3.3.4 Common midpoint stacking p. 141
- 3.3.5 Signal enhancement p. 145
- 3.3.6 Deconvolution p. 148
- 3.3.7 Migration p. 152
- 3.3.8 Data processing sequence p. 156
- 3.4 Seismic waves in a spherical earth p. 157
- 3.4.1 Ray paths and travel times p. 157
- 3.4.2 Velocity distributions p. 159
- 3.4.3 Travel time curve inversion p. 161
- 3.5 Body wave travel time studies p. 162
- 3.5.1 Body wave phases p. 163
- 3.5.2 Core phases p. 166
- 3.5.3 Upper mantle structure p. 169
- 3.5.4 Lower mantle structure p. 171
- 3.5.5 Visualizing body waves p. 174
- 3.6 Anisotropic earth structure p. 177
- 3.6.1 General considerations p. 177
- 3.6.2 Transverse isotropy and azimuthal anisotropy p. 177
- 3.6.3 Anisotropy of minerals and rocks p. 179
- 3.6.4 Anisotropy of composite structures p. 180
- 3.6.5 Anisotropy in the lithosphere and the asthenosphere p. 180
- 3.6.6 Anisotropy in the mantle and the core p. 182
- 3.7 Attenuation and anelasticity p. 185
- 3.7.1 Wave attenuation p. 185
- 3.7.2 Geometric spreading p. 187
- 3.7.3 Multipathing p. 187
- 3.7.4 Scattering p. 189
- 3.7.5 Intrinsic attenuation p. 190
- 3.7.6 Quality factor, Q p. 192
- 3.7.7 Spectral resonance peaks p. 193
- 3.7.8 Physical dispersion due to anelasticity p. 194
- 3.7.9 Physical models for anelasticity p. 196
- 3.7.10 Q from crust to inner core p. 197
- 3.8 Composition of the mantle and the core p. 198
- 3.8.1 Density within the earth p. 199
- 3.8.2 Temperature in the earth p. 203
- 3.8.3 Composition of the mantle p. 204

- 3.8.4 Composition of D" p. 208
- 3.8.5 Composition of the core p. 209
- 3.8.6 Seismology and planetary evolution p. 210
- Further reading p. 212
- Problems p. 212
- 4 Earthquakes p. 215
- 4.1 Introduction p. 215
- 4.2 Focal mechanisms p. 217
- 4.2.1 Fault geometry p. 217
- 4.2.2 First motions p. 219
- 4.2.3 Body wave radiation patterns p. 220
- 4.2.4 Stereographic fault plane representation p. 222
- 4.2.5 Analytical representation of fault geometry p. 228
- 4.3 Waveform modeling p. 229
- 4.3.1 Basic model p. 229
- 4.3.2 Source time function p. 230
- 4.3.3 Body wave modeling p. 231
- 4.3.4 Surface wave focal mechanisms p. 235
- 4.3.5 Once and future earthquakes p. 239
- 4.4 Moment tensors p. 239
- 4.4.1 Equivalent forces p. 239
- 4.4.2 Single forces p. 240
- 4.4.3 Force couples p. 241
- 4.4.4 Double couples p. 242
- 4.4.5 Earthquake moment tensors p. 242
- 4.4.6 Isotropic and CLVD moment tensors p. 245
- 4.4.7 Moment tensor inversion p. 246
- 4.4.8 Interpretation of moment tensors p. 249
- 4.5 Earthquake geodesy p. 251
- 4.5.1 Measuring ground deformation p. 251
- 4.5.2 Coseismic deformation p. 254
- 4.5.3 Joint geodetic and seismological earthquake studies p. 256
- 4.5.4 Interseismic deformation and the seismic cycle p. 259
- 4.6 Source parameters p. 263
- 4.6.1 Magnitudes and moment p. 263
- 4.6.2 Source spectra and scaling laws p. 266
- 4.6.3 Stress drop and earthquake energy p. 269
- 4.7 Earthquake statistics p. 274
- 4.7.1 Frequency-magnitude relations p. 274
- 4.7.2 Aftershocks p. 277
- 4.7.3 Earthquake probabilities p. 278
- Further reading p. 282
- Problems p. 282
- 5 Seismology and Plate Tectonics p. 286

- 5.1 Introduction p. 286
- 5.2 Plate kinematics p. 290
 - 5.2.1 Relative plate motions p. 290
 - 5.2.2 Global plate motions p. 293
 - 5.2.3 Space-based geodesy p. 295
 - 5.2.4 Absolute plate motions p. 296
- 5.3 Spreading centers p. 298
 - 5.3.1 Geometry of ridges and transforms p. 298
 - 5.3.2 Evolution of the oceanic lithosphere p. 299
 - 5.3.3 Ridge and transform earthquakes and processes p. 305
- 5.4 Subduction zones p. 307
 - 5.4.1 Thermal models of subduction p. 308
 - 5.4.2 Earthquakes in subducting slabs p. 312
 - 5.4.3 Interplate trench earthquakes p. 321
- 5.5 Oceanic intraplate earthquakes and tectonics p. 326
 - 5.5.1 Locations of oceanic intraplate seismicity p. 326
 - 5.5.2 Forces and stresses in the oceanic lithosphere p. 328
 - 5.5.3 Constraints on mantle viscosity p. 331
- 5.6 Continental earthquakes and tectonics p. 333
 - 5.6.1 Continental plate boundary zones p. 334
 - 5.6.2 Seismic, aseismic, transient, and permanent deformation p. 339
 - 5.6.3 Continental intraplate earthquakes p. 342
- 5.7 Faulting and deformation in the earth p. 346
 - 5.7.1 Rheology p. 346
 - 5.7.2 Rock fracture and friction p. 348
 - 5.7.3 Ductile flow p. 355
 - 5.7.4 Strength of the lithosphere p. 357
 - 5.7.5 Earthquakes and rock friction p. 359
 - 5.7.6 Earthquakes and regional deformation p. 364
 - Further reading p. 366
 - Problems p. 367
- 6 Seismograms as Signals p. 369
 - 6.1 Introduction p. 369
 - 6.2 Fourier analysis p. 369
 - 6.2.1 Fourier series p. 369
 - 6.2.2 Complex Fourier series p. 371
 - 6.2.3 Fourier transforms p. 372
 - 6.2.4 Properties of Fourier transforms p. 374
 - 6.2.5 Delta functions p. 375
 - 6.3 Linear systems p. 377
 - 6.3.1 Basic model p. 377
 - 6.3.2 Convolution and deconvolution modeling p. 379
 - 6.3.3 Finite length signals p. 380
 - 6.3.4 Correlation p. 383

- 6.4 Discrete time series and transforms p. 385
- 6.4.1 Sampling of continuous data p. 385
- 6.4.2 The discrete Fourier transform p. 387
- 6.4.3 Properties of DFTs p. 389
- 6.4.4 The fast Fourier transform (FFT) p. 389
- 6.4.5 Digital convolution p. 390
- 6.5 Stacking p. 391
- 6.5.1 Random errors p. 392
- 6.5.2 Stacking examples p. 395
- 6.6 Seismometers and seismological networks p. 398
- 6.6.1 Introduction p. 398
- 6.6.2 The damped harmonic oscillator p. 398
- 6.6.3 Earth noise p. 400
- 6.6.4 Seismometers and seismographs p. 400
- 6.6.5 Digital recording p. 405
- 6.6.6 Types of networks p. 407
- 6.6.7 Global networks p. 407
- 6.6.8 Arrays p. 409
- 6.6.9 Regional networks p. 410
- Further reading p. 412
- Problems p. 412
- 7 Inverse Problems p. 415
- 7.1 Introduction p. 415
- 7.2 Earthquake location p. 416
- 7.2.1 Theory p. 416
- 7.2.2 Earthquake location for a homogeneous medium p. 419
- 7.2.3 Errors p. 420
- 7.2.4 Earthquake location for more complex geometries p. 422
- 7.3 Travel time tomography p. 424
- 7.3.1 Theory p. 424
- 7.3.2 Generalized inverse p. 426
- 7.3.3 Properties of the generalized inverse solution p. 427
- 7.3.4 Variants of the solution p. 429
- 7.3.5 Examples p. 430
- 7.4 Stratified earth structure p. 434
- 7.4.1 Earth structure from normal modes p. 434
- 7.4.2 Parameter and data space inversions p. 436
- 7.4.3 Features of the solutions p. 437
- 7.5 Inverting for plate motions p. 439
- 7.5.1 Method p. 439
- 7.5.2 Testing the results with χ^2 and F-ratio tests p. 440
- Further reading p. 441
- Problems p. 442
- Appendix Mathematical and Computational Background p. 443

- A.1 Introduction p. 443
- A.2 Complex numbers p. 443
- A.3 Scalars and vectors p. 445
 - A.3.1 Definitions p. 445
 - A.3.2 Elementary vector operations p. 446
 - A.3.3 Scalar products p. 446
 - A.3.4 Vector products p. 447
 - A.3.5 Index notation p. 448
 - A.3.6 Vector spaces p. 449
- A.4 Matrix algebra p. 450
 - A.4.1 Definitions p. 450
 - A.4.2 Determinant p. 451
 - A.4.3 Inverse p. 452
 - A.4.4 Systems of linear equations p. 452
 - A.4.5 Solving systems of equations on a computer p. 453
- A.5 Vector transformations p. 454
 - A.5.1 Coordinate transformations p. 455
 - A.5.2 Eigenvalues and eigenvectors p. 456
 - A.5.3 Symmetric matrix eigenvalues, eigenvectors, diagonalization, and decomposition p. 458
- A.6 Vector calculus p. 458
 - A.6.1 Scalar and vector fields p. 458
 - A.6.2 Gradient p. 459
 - A.6.3 Divergence p. 459
 - A.6.4 Curl p. 460
 - A.6.5 Laplacian p. 461
- A.7 Spherical coordinates p. 462
 - A.7.1 The spherical coordinate system p. 462
 - A.7.2 Distance and azimuth p. 463
 - A.7.3 Choice of axes p. 465
 - A.7.4 Vector operators in spherical coordinates p. 465
- A.8 Scientific programming p. 466
 - A.8.1 Example: synthetic seismogram calculation p. 466
 - A.8.2 Programming style p. 469
 - A.8.3 Representation of numbers p. 470
 - A.8.4 A few pitfalls p. 471
 - A.8.5 Some philosophical points p. 472
