

## Table of Contents

- Preface p. xv
- Acknowledgements p. xvi
- Section I Investigating health services and health: the scope of research p. 1
- 1 Evaluating health services: multidisciplinary collaboration p. 5
  - Introduction p. 6
  - Health services research p. 6
  - The assessment of quality p. 7
  - Audit p. 8
  - Medical audit, clinical audit and quality assurance p. 8
  - Evaluation p. 9
  - Structure, process and outcome p. 10
  - Appropriateness and inappropriateness p. 11
  - Outcome p. 12
- 2 Social research on health: sociological and psychological concepts and approaches p. 17
  - Introduction p. 18
  - Sociological and psychological research on health p. 18
  - 1 Health and illness p. 19
    - The bio-medical model p. 19
    - The social model of health p. 20
    - Lay definitions of health p. 20
    - Lay theories of illness p. 21
    - Variations in medical and lay perspectives p. 22
  - 2 Social factors in illness and responses to illness p. 23
    - Social variations in health: structural inequalities p. 23
    - Psycho-social stress and responses to stress p. 24
    - Stigma, normalisation and adjustment p. 27
    - The Sick Role and illness behaviour p. 29
  - 3 Models of health behaviour p. 33
    - Health lifestyles p. 33
    - Health behaviour p. 34
    - Models of health-related actions p. 35
  - 4 Health-related quality of life p. 38
    - Theoretical influences on measurement p. 39
  - 5 Interactions between health professionals and patients p. 41
    - Communication p. 41
    - Patients' evaluations of health care p. 42
- 3 Health needs and their assessment: demography and epidemiology Ian Rees Jones p. 54
  - Introduction p. 55
  - 1 The assessment of health needs p. 55
    - Health needs p. 55
    - The need for health and the need for health care p. 56
  - 2 Epidemiology p. 63
    - Epidemiological research p. 64

- Methods of assessing health needs p. 59
- The role of epidemiological and demographic research p. 62
- The role of epidemiology p. 63
- Methods of epidemiology p. 66
- Assessing morbidity, mortality, incidence and prevalence p. 73
- 3 The role of demography p. 77
  - Demographical methods in relation to assessing need p. 78
  - Rates: births and deaths p. 79
  - The need to standardise p. 80
  - Analyses of survival p. 83
- 4 Costing health services: health economics Ian Rees Jones p. 89
  - Introduction p. 90
  - Health economics p. 90
  - Demand, utility and supply p. 92
  - Cost minimisation p. 94
  - Cost-effectiveness p. 94
  - Cost-benefit analysis p. 95
  - Marginal cost p. 96
  - Complete costs p. 96
  - Event pathways p. 97
  - Opportunity cost p. 98
  - Discounting p. 100
  - Cost-utility analysis p. 100
  - Cost-utility analysis and economic valuations of health p. 101
  - Costing health services p. 107
  - Study methods used for costings p. 111
- Section II The philosophy, theory and practice of research p. 115
- 5 The philosophical framework of measurement p. 117
  - Introduction p. 118
  - The philosophy of science p. 118
  - Paradigms p. 119
  - Objectivity and value freedom p. 119
  - Deductive and inductive approaches p. 120
  - The survival of hypotheses and paradigm shifts p. 124
  - Theoretical influences on social research methods p. 125
  - Social science and grounded theory p. 125
  - Positivism p. 126
  - Phenomenology p. 128
  - Choice of methods p. 130
- 6 The principles of research p. 133
  - Literature reviews p. 136
  - Economic appraisal p. 93
  - Introduction p. 134
  - Searching the literature p. 134
  - Meta-analyses p. 136
  - Rigour p. 138

- Aims, objectives and hypotheses p. 138
- Concepts and theories p. 139
- Research proposals p. 141
- Research design and research methods p. 143
- Selection of measurement instruments p. 144
- Level of data and statistical techniques p. 144
- Reliability and validity p. 147
- Threats to reliability and validity p. 153
- Ethics and ethical committees p. 156
- Dissemination p. 159
- Section III Quantitative research: sampling and research methods p. 163
- 7 Sample size and sampling for quantitative research p. 165
  - Introduction p. 166
  - 1 Calculation of sample size, statistical significance and sampling p. 166
    - The sampling unit p. 166
    - Calculation of sample size and statistical power p. 167
    - Testing hypotheses, statistical significance, the null hypothesis p. 169
    - Type I and type II errors p. 170
    - One- or two-sided hypothesis testing p. 172
    - Statistical, social and clinical significance p. 173
    - Sampling frames p. 174
    - Sampling p. 176
    - Confidence intervals and the normal distribution p. 177
    - External validity of the sample results p. 182
  - 2 Methods of sampling p. 183
    - Random sampling p. 183
    - Non-random sampling: quota sampling p. 186
    - Sampling for qualitative research p. 187
    - Sampling for telephone interviews p. 188
    - Retrospective (ex post facto), cross-sectional surveys p. 197
- 8 Quantitative research: surveys p. 193
  - Introduction p. 194
  - 1 Survey methods p. 194
    - The survey p. 194
    - Descriptive and analytic surveys p. 195
    - Prospective, longitudinal surveys p. 197
    - Cross-sectional and longitudinal cohort studies p. 200
    - Triangulated research methods and surveys p. 201
  - 2 Methods of analysing change in longitudinal surveys p. 202
    - Analysing change p. 202
    - Sample attrition and analysing change p. 209
    - Stopping rules and analysis of interim results p. 212
- 9 Quantitative research: experiments and other analytic methods of investigation p. 215
  - Introduction p. 216
  - The experimental method p. 216
  - Internal and external validity p. 219

- Reducing bias in participants and the investigating team p. 223
- Blind experiments p. 224
- The randomised controlled trial in health care evaluation p. 225
- Other analytic methods of investigation p. 228
- Before-after study with non-randomised control group p. 231
- After-only study with non-randomised control group p. 231
- Time series studies using different samples (historical controls) p. 232
- Geographical comparisons p. 232
- People acting as own controls p. 233
- Within-person, controlled site study p. 233
- Threats to the validity of causal inferences in other analytic studies p. 233
- 10 Sample selection and group assignment methods in experiments and other analytic methods p. 237
  - Introduction p. 238
  - Random sampling p. 238
  - Convenience and purposive sampling p. 238
  - Volunteers p. 239
  - Type of investigation and type of sampling frame p. 239
  - Response rates: experiments and other analytical studies p. 240
  - Common methods of controlling to obtain equivalence in non-randomised studies p. 250
  - Ensuring similarity in group characteristics: random allocation p. 241
  - Other allocation methods: cross-over methods p. 247
  - Methods of group design for improving the basic RCT p. 248
  - Structured and semi-structured questionnaires p. 258
- Section IV The tools of quantitative research p. 255
- 11 Data collection methods in quantitative research: questionnaires, interviews and their response rates p. 257
  - Introduction p. 258
  - Postal questionnaires and self-administration p. 259
  - Structured and semi-structured interviews p. 260
  - Non-response p. 263
  - Item non-response p. 269
- 12 Questionnaire design p. 273
  - Introduction p. 274
  - Planning p. 274
  - Piloting p. 275
  - Questionnaire layout p. 275
  - The covering letter p. 277
  - Question form, order and wording p. 278
  - Rules for form p. 278
  - Scores p. 286
  - Constructing additional items and scales p. 287
  - Attitude measurement scales p. 288
  - Rules for order and wording p. 294
  - Rules for questions by type of topic p. 300

- Checking the accuracy of responses p. 306
- Translating an instrument and cultural equivalence p. 307
- 13 Techniques of survey interviewing p. 310
  - Introduction p. 311
  - Types of interview p. 311
  - The interviewer p. 311
  - Interviewer handbooks p. 313
  - Sampling by interviewers p. 315
  - Interviewer training p. 316
  - Interviewer bias p. 317
  - Persistence in contacting respondents p. 318
  - Approaching respondents p. 319
  - Motivating people to respond p. 320
  - Third parties and distractions p. 322
  - Beginning the interview p. 323
  - Recording responses p. 331
  - Rules for structured interviewing p. 324
  - Interviewing techniques p. 326
  - The end of the interview p. 330
  - Debriefing p. 332
  - Quality control p. 332
- 14 Preparation of quantitative data for coding and analysis p. 335
  - Introduction p. 336
  - Coding p. 336
  - Coding transfer sheets p. 338
  - The code book p. 339
  - Numerical values for codes p. 340
  - Coding open questions p. 341
  - Coding closed questions p. 343
  - Checking returned questionnaires p. 343
  - Data entry on to computer p. 344
  - Cleaning the data p. 345
  - Checking for bias in the analyses p. 346
  - Missing values and data checks p. 346
  - Computer packages for the analysis of quantitative data p. 347
  - The analysis p. 348
- Section V Qualitative and combined research methods, and their analysis p. 351
- 15 Unstructured and structured observational studies p. 355
  - Introduction p. 356
  - Observation p. 358
  - Participant observation p. 359
  - Gaining access p. 360
  - Hardware: video- and audiotapes p. 361
  - Unstructured observations p. 367
  - Establishing validity and reliability p. 362
  - Observation and triangulated methods p. 364

- Structured observations: what to record p. 364
- Time sampling p. 366
- Recording observed (non-verbal) body language p. 366
- Combining structured and unstructured recordings p. 368
- Theoretical analysis of observational data p. 369
- Categorisation of observational data p. 371
- Narratives p. 373
- Audio-observation: conversation sampling p. 373
- Recording and analysing verbal communication p. 374
- 16 Unstructured interviewing and focus groups p. 377
- Introduction p. 378
- 1 Unstructured interviews p. 378
- Types of unstructured, in-depth interview p. 378
- In-depth interviewing: sample selection and size p. 379
- The process of the interview p. 381
- Techniques of in-depth interviewing p. 382
- Analysis and presentation of in-depth interview data p. 385
- Categorising qualitative data: content analysis p. 387
- Rules for coding p. 389
- Focus group interviews p. 394
- Computer programs for analysing qualitative data p. 391
- Narrative format p. 392
- 2 Focus groups p. 394
- Group composition p. 395
- Appropriate topics for focus groups p. 395
- Methods of analysis p. 398
- 17 Other methods using both qualitative and quantitative approaches: case studies, consensus methods, action research and document research p. 402
- Introduction p. 403
- 1 Case studies p. 403
- The study of single or small series of cases p. 403
- Examples of case studies p. 404
- The analysis p. 406
- 2 Consensus methods p. 406
- Methods for establishing and developing consensus p. 406
- Delphi technique p. 407
- 3 Action research and rapid appraisal techniques p. 410
- Consensus development panels p. 407
- Nominal group process p. 407
- The analysis p. 409
- Action research p. 410
- Stages of action research p. 412
- Types of documents p. 416
- Rapid appraisal p. 414
- 4 Document research p. 415
- Documents as sources of, or for, research p. 415

- Authenticity, bias, error and interpretation p. 418
- Types of document research p. 419
- Analysis of documents p. 421
- Diary methods p. 424
- Analysis of diaries p. 427
- Glossary p. 430
- References p. 439
- Index p. 479
