

Table of Contents

- List of contributors p. xi
- Preface p. xiii
- Section I Chromatography-Tandem Mass Spectrometry p. 1
- 1 Recent developments in gas chromatography-mass spectrometry for the detection of food chemical hazards Renbang Zhao p. 3
- 1.1 The combination of gas chromatography and mass spectrometry p. 3
- 1.1.1 Introduction p. 3
- 1.1.2 Basic gas chromatography p. 4
- 1.1.3 Typical mass analyzers and MS detectors in GC-MS p. 5
- 1.1.4 New development in GC-MS and sample preparation p. 6
- 1.2 Analysis of pesticide residues in foods p. 8
- 1.2.1 Sample preparation p. 8
- 1.2.2 Development of GC-MS methods for the determination of pesticides in foods p. 12
- 1.3 Analysis of contaminants formed during food processing p. 18
- 1.3.1 Acrylamide p. 18
- 1.3.2 Heterocyclic amines p. 20
- 1.3.3 Furan p. 22
- 1.3.4 Polycyclic aromatic hydrocarbons (PAHs) p. 25
- 1.3.5 Tetramine p. 27
- 1.3.6 Chloropropanols p. 27
- 1.4 Analysis of environmental contaminants p. 30
- 1.4.1 Organometallic compounds p. 30
- 1.4.2 Poly chlorinated biphenyls p. 31
- 1.4.3 Monocyclic aromatic hydrocarbons p. 34
- 1.5 Analysis of contaminants from packaging materials p. 35
- 1.6 Nitrite p. 39
- Summary p. 40
- Abbreviations p. 40
- References p. 41
- 2 Recent developments in liquid chromatography-mass spectrometry for the detection of food chemical hazards Hongyan Zhang and Jinxing He p. 53
- 2.1 Introduction to food safety detection by liquid chromatography-mass spectrometry p. 53
- 2.2 Principles and current technology of LC-MS p. 55
- 2.2.1 Extraction and/or purification of specific analytes in food samples p. 55
- 2.2.2 Typical LC conditions for LC-MS analysis p. 56
- 2.2.3 Mass spectrometry p. 57
- 2.2.4 Interface technology p. 58
- 2.2.5 Method validation and matrix effects p. 59
- 2.3 Applications of LC-MS in food safety detection p. 60
- 2.3.1 Applications of LC-MS in the analysis of veterinary drugs and growth-promoting agents p. 60
- 2.3.2 Applications of LC-MS in the analysis of pesticide residue in food p. 79
- 2.3.3 Applications of LC-MS in the analysis of biotoxins in foods p. 84

- 2.4 Conclusion p. 87
- Abbreviations p. 87
- References p. 89
- Section II Immunoassays p. 103
- 3 State of the art immunoassay developments and application to food chemical hazards Xianghong Wang p. 105
- 3.1 Development and use of immunoassay to monitor food chemical hazards p. 105
- 3.1.1 Chemical hazards in foods p. 105
- 3.1.2 Development of immunoassay in the detection of food chemical hazards p. 107
- 3.2 Design and synthesis of haptens p. 108
- 3.3 Antibody production p. 112
- 3.3.1 Elementary knowledge of antibodies p. 112
- 3.3.2 Antibody classification p. 113
- 3.4 Immunoassay formats p. 115
- 3.4.1 Antigen-antibody reaction p. 115
- 3.4.2 Immunoassay classification p. 120
- 3.5 Sample preparation from various matrices p. 126
- 3.6 Conclusion p. 127
- References p. 128
- 4 Molecularly imprinted polymers (MIPs) - an emerging technique for chemical hazard determination Qiliang Deng and Shuo Wang p. 137
- 4.1 Introduction p. 137
- 4.2 Preparation of molecularly imprinted polymers p. 138
- 4.2.1 Template molecule p. 140
- 4.2.2 Functional monomer p. 140
- 4.2.3 Cross-linker monomer p. 141
- 4.2.4 Solvents p. 142
- 4.2.5 Initiator p. 143
- 4.2.6 Polymerization technique p. 143
- 4.3 Molecularly imprinted solid-phase extraction modes p. 145
- 4.3.1 Off-line mode p. 146
- 4.3.2 On-line mode p. 147
- 4.4 Applications of MISPE in food chemical hazard determination p. 148
- 4.4.1 Determination of drug residues p. 148
- 4.4.2 Determination of pesticides p. 155
- 4.4.3 Determination of herbicides p. 156
- 4.4.4 Determination of additives p. 158
- 4.4.5 Determination of environmental contaminants p. 161
- 4.5 Conclusion and outlook p. 161
- References p. 162
- Section III Biophotonics p. 173
- 5 Recent developments in infrared spectroscopy for the detection of food chemical hazards Xiaonan Lu p. 175
- 5.1 A brief introduction to infrared spectroscopy and its application in the food industry p. 175
- 5.2 Application of IR spectroscopy to detect chemical adulterants in foods p. 177

- 5.3 Application of IR spectroscopy to detect mycotoxins in foods p. 178
- 5.4 Application of IR spectroscopy to detect pesticides in foods p. 181
- 5.5 Application of IR spectroscopy to detect antibiotic residues in foods p. 181
- 5.6 Tips for reporting results p. 182
- 5.7 Trends in IR instrumentation p. 184
- 5.8 Trends in further applications of chemometrics to analyze IR spectra p. 186
- 5.9 Conclusion p. 186
- References p. 186
- 6 Recent developments in Raman spectroscopy for the detection of food chemical hazards Lili He p. 191
- 6.1 Introduction p. 191
- 6.1.1 Raman theory p. 191
- 6.1.2 Raman instrumentation and data analysis p. 192
- 6.1.3 Surface-enhanced Raman spectroscopy p. 193
- 6.2 Detection of chemicals in simple solvents p. 194
- 6.3 Detection of chemicals in food matrices p. 196
- 6.3.1 Detection of small chemical molecules in food matrices p. 196
- 6.3.2 Detection of large protein molecules in food matrices p. 199
- 6.4 Conclusion and outlook p. 203
- References p. 204
- Section IV Nanotechnology p. 207
- 7 Engineered nanoparticles (ENPs): applications, risk assessment, and risk management in the agriculture and food sectors Mahmoudreza Ovissipour and Syamaladevi M. Roopesh and Barbara A. Rasco and Shyam S. Sablani p. 209
- 7.1 Introduction p. 209
- 7.2 Naturally occurring nanoparticles p. 211
- 7.3 Nanoparticle engineering p. 213
- 7.4 Engineered nanoparticles (ENPs) p. 214
- 7.5 Applications of ENPs in the agriculture and food sectors p. 216
- 7.5.1 Applications of ENPs in agriculture p. 217
- 7.5.2 Antimicrobial applications of ENPs p. 223
- 7.5.3 Applications of encapsulated ENPs in foods p. 225
- 7.5.4 Applications of ENPs in food packaging p. 225
- 7.6 Nanosensors p. 227
- 7.7 Impacts of ENPs on the environment p. 228
- 7.8 Risk assessment and risk management of ENPs in food technology p. 233
- 7.9 Future trends p. 235
- References p. 236
- 8 Nanotechnology and its applications to improve the detection of chemical hazards in foods Mengshi Lin p. 249
- 8.1 Introduction p. 249
- 8.2 Nanomaterials used in sensors p. 250
- 8.3 Chemical hazards in foods p. 251
- 8.3.1 Pesticides p. 251
- 8.3.2 Veterinary drugs p. 253
- 8.3.3 Bisphenol A p. 255

- 8.3.4 Melamine p. 256
- 8.3.5 Acrylamide p. 258
- 8.4 Conclusion p. 258
- References p. 258
- Section V Biosensors p. 263
- 9 Microfluidics "lab-on-a-chip" system for food chemical hazard detection Jie Xu p. 265
- 9.1 Microfluidics and "lab-on-a-chip" p. 265
- 9.3 Fluid mechanics at the microscale p. 266
- 9.4 Microfabrication technologies p. 269
- 9.4 Detection techniques p. 272
- 9.5 Representative applications in the detection of chemical hazards in foods p. 272
- 9.6 Future perspectives p. 279
- References p. 280
- 10 Colorimetric biosensor for food chemical hazards detection Jianlong Wang and H. Susan Zhou p. 291
- 10.1 Introduction p. 291
- 10.2 Detection of hazardous chemicals in foods using colorimetric biosensors based on bio-nanomaterials p. 293
- 10.2.1 Colorimetric detection of pesticides p. 295
- 10.2.2 Colorimetric detection of veterinary drugs p. 298
- 10.2.3 Colorimetric detection of heavy metal ions p. 301
- 10.2.4 Colorimetric detection of food additives p. 303
- 10.2.5 Colorimetric detection of toxins p. 305
- 10.2.6 Colorimetric detection of other hazardous chemical contaminants p. 305
- 10.3 Conclusion p. 306
- Acknowledgments p. 307
- References p. 307
- Index p. 315
