Table of contents provided by Syndetics

- **Preface** (p. xiii)
- **Part I Development of a mechanical model for soil** (p. 1)
- **1 Basic characteristics of soils** (p. 3)
- **Learning outcomes** (p. 3)
- **1.1 The origin of soils** (p. 3)
- **1.2 The nature of soils** (p. 6)
- **1.3 Plasticity of fine-grained soils** (p. 10)
- **1.4 Particle size analysis** (p. 13)
- **1.5 Soil description and classification** (p. 15)
- **1.6 Phase relationships** (p. 23)
- **Summary** (p. 28)
- **Problems** (p. 28)
- **References** (p. 29)
- **Further reading** (p. 30)
- **2 Seepage** (p. 31)
- **Learning outcomes** (p. 31)
- **2.1 Soil water** (p. 31)
- **2.2 Permeability and testing** (p. 33)
- **2.3 Seepage theory** (p. 40)
- **2.4 Flow nets** (p. 44)
- **2.5 Anisotropic soil conditions** (p. 51)
- **2.6 Non-homogeneous soil conditions** (p. 53)
- **2.7 Transfer condition** (p. 54)
- **2.8 Numerical solution using the Finite Difference Method** (p. 56)
- **2.9 Seepage through embankment dams** (p. 59)
- **2.10 Filter design** (p. 68)
- **Summary** (p. 69)
- **Problems** (p. 69)
- **References** (p. 72)
- **Further reading** (p. 73)
- **3 Effective stress** (p. 75)
- **Learning outcomes** (p. 75)
- **3.1 Introduction** (p. 75)
- **3.2 The Principle of Effective Stress** (p. 76)
- **3.3 Numerical solution using the Finite Difference Method** (p. 79)
- **3.4 Response of effective stress to a change in total stress** (p. 80)
- **3.5 Effective stress in partially saturated soils** (p. 83)
- **3.6 Influence of seepage on effective stress** (p. 85)
- **3.7 Liquefaction** (p. 88)
- **Summary** (p. 95)
- **Problems** (p. 96)
- **References** (p. 97)
- **Further reading** (p. 98)
- **4 Consolidation** (p. 99)

- **Learning outcomes** (p. 99)
- **4.1 Introduction** (p. 99)
- **4.2 The oedometer test** (p. 100)
- **4.3 Estimating compression and swelling parameters from index tests** (p. 108)
- **4.4 Consolidation settlement** (p. 109)
- **4.5 Degree of consolidation** (p. 112)
- **4.6 Terzaghi's Theory of One-Dimensional Consolidation** (p. 115)
- **4.7 Determination of coefficient of consolidation** (p. 120)
- **4.8 Secondary compression** (p. 127)
- **4.9 Numerical solution using the Finite Difference Method** (p. 128)
- **4.10 Correction for construction period** (p. 132)
- **4.11 Vertical drains** (p. 137)
- **4.12 Pre-loading** (p. 142)
- **Summary** (p. 143)
- **Problems** (p. 144)
- **References** (p. 145)
- **Further reading** (p. 147)
- **5 Soil behaviour in shear** (p. 149)
- **Learning outcomes** (p. 149)
- **5.1 An introduction to continuum mechanics** (p. 149)
- **5.2 Simple models of soil elasticity** (p. 153)
- **5.3 Simple models of soil plasticity** (p. 156)
- **5.4 Laboratory shear tests - the direct shear test** (p. 161)
- **5.5 Laboratory shear tests - the triaxial test** (p. 163)
- **5.6 Shear strength of coarse-grained soils** (p. 175)
- **5.7 Shear strength of saturated fine-grained soils** (p. 182)
- **5.8 The Critical State framework** (p. 192)
- **5.9 Residual strength** (p. 198)
- **5.10 Estimating shear strength and stiffness parameters from index tests** (p. 199)
- **Summary** (p. 208)
- **Problems** (p. 209)
- **References** (p. 211)
- **Further reading** (p. 213)
- **6 Ground investigation** (p. 215)
- **Learning outcomes** (p. 215)
- **6.1 Introduction** (p. 215)
- **6.2 Methods of intrusive investigation** (p. 218)
- **6.3 Sampling** (p. 225)
- **6.4 Selection of laboratory test method(s)** (p. 231)
- **6.5 Borehole logs** (p. 231)
- **6.6 Cone Penetration Testing (CPT)** (p. 234)
- **6.7 Flat dilatometer test (DMT)** (p. 238)
- **6.8 Geophysical methods** (p. 241)
- **6.9 Additional considerations in contaminated ground** (p. 246)
- **6.10 Development of a simplified ground model using statistical methods** (p. 247)
- **Summary** (p. 251)

- **References** (p. 251)
- **Further reading** (p. 253)
- **7 In-situ testing** (p. 255)
- **Learning outcomes** (p. 255)
- **7.1 Introduction** (p. 255)
- **7.2 Standard Penetration Test (SPT)** (p. 256)
- **7.3 Field Vane Test (FVT)** (p. 261)
- **7.4 Pressuremeter Test (PMT)** (p. 265)
- **7.5 Cone Penetration Test (CPT)** (p. 278)
- **7.6 Flat dilatometer test (DMT)** (p. 288)
- **7.7 Selection of in-situ test method(s)** (p. 294)
- **Summary** (p. 295)
- **Problems** (p. 296)
- **References** (p. 299)
- **Further reading** (p. 301)
- **Part II Applications in geotechnical engineering** (p. 303)
- **8 Shallow foundations: capacity** (p. 305)
- **Learning outcomes** (p. 305)
- **8.1 Introduction** (p. 305)
- **8.2 Bearing capacity and limit analysis** (p. 308)
- **8.3 Bearing capacity in undrained materials** (p. 309)
- **8.4 Bearing capacity in drained materials** (p. 323)
- **8.5 Capacity and Limit State Design** (p. 333)
- **8.6 Deep basements (uplift)** (p. 339)
- **8.7 Shallow foundations under combined loading** (p. 341)
- **Summary** (p. 350)
- **Problems** (p. 351)
- **References** (p. 352)
- **Further reading** (p. 353)
- **9 Shallow foundations: serviceability** (p. 355)
- **Learning outcomes** (p. 355)
- **9.1 Introduction** (p. 355)
- **9.2 Differential settlement and structural damage** (p. 356)
- **9.3 Stresses beneath shallow foundations** (p. 361)
- **9.4 Settlements from soil stiffness (G-¿ method)** (p. 367)
- **9.5 Settlements from consolidation theory (m v method)** (p. 376)
- **9.6 Estimating settlements directly from in-situ test data** (p. 383)
- **9.7 Settlement and Limit State Design** (p. 389)
- **9.8 Shallow foundation systems (pads, strips and rafts)** (p. 391)
- **9.9 Deformations under combined loading** (p. 395)
- **Summary** (p. 396)
- **Problems** (p. 397)
- **References** (p. 398)
- **Further reading** (p. 399)
- **10 Deep foundations** (p. 401)
- **Learning outcomes** (p. 401)

- **10.1 Introduction** (p. 401)
- **10.2 Pile resistance under compressive loads** (p. 406)
- **10.3 Pile resistance direct from in-situ test data** (p. 415)
- **10.4 Settlement of piles** (p. 417)
- **10.5 Piles under tensile loads** (p. 428)
- **10.6 Negative skin friction** (p. 429)
- **10.7 Load testing** (p. 430)
- **10.8 Pile groups** (p. 434)
- **10.9 Piled rafts** (p. 439)
- **10.10 Deep foundations under combined loading** (p. 443)
- **Summary** (p. 454)
- **Problems** (p. 455)
- **References** (p. 457)
- **Further reading** (p. 459)
- **11 Retaining structures** (p. 461)
- **Learning outcomes** (p. 461)
- **11.1 Introduction** (p. 461)
- **11.2 Limiting earth pressures from limit analysis** (p. 462)
- **11.3 Earth pressure at rest and mobilisation of limit pressures** (p. 474)
- **11.4 Gravity retaining structures** (p. 477)
- **11.5 Coulomb's Theory of Earth Pressure** (p. 488)
- **11.6 Backfilling and compaction-induced earth pressures** (p. 494)
- **11.7 Embedded (flexible) walls** (p. 497)
- **11.8 Ground anchorages** (p. 511)
- **11.9 Braced excavations** (p. 516)
- **11.10 Reinforced soil retaining systems** (p. 521)
- **Summary** (p. 524)
- **Problems** (p. 525)
- **References** (p. 528)
- **Further reading** (p. 529)
- **12 Earthworks** (p. 531)
- **Learning outcomes** (p. 531)
- **12.1 Introduction** (p. 531)
- **12.2 Vertical cuttings and trenches** (p. 532)
- **12.3 Slopes** (p. 537)
- **12.4 Embankments and embankment dams** (p. 552)
- **12.5 Soil compaction** (p. 556)
- **12.6 Working platforms** (p. 564)
- **12.7 Underground cavities - tunnels and sinkholes** (p. 567)
- **Summary** (p. 574)
- **Problems** (p. 575)
- **References** (p. 578)
- **Further reading** (p. 580)
- **13 Evaluating geotechnical performance** (p. 581)
- **Learning outcomes** (p. 581)
- **13.1 Introduction** (p. 581)

- **13.2 Field instrumentation** (p. 582)
- **13.3 Monitoring and smart infrastructure** (p. 591)
- **13.4 The observational method** (p. 593)
- **13.5 Illustrative cases** (p. 594)
- **Summary** (p. 595)
- **References** (p. 596)
- **Further reading** (p. 596)
- **Principal Symbols** (p. 597)
- **Glossary** (p. 607)
- **Index** (p. 625)
