

## Table of Contents

- Preface p. xiii
- Author p. xv
- Notation p. xvii
- Chapter 1 Introduction p. 1
- 1.1 Review of Units and Dimensions p. 1
- 1.1.1 Units p. 1
- 1.1.2 Fundamental Dimensions p. 1
- 1.1.2.1 Mass and Weight p. 1
- 1.1.2.3 Mole p. 4
- 1.1.3 Derived Dimensional Quantities p. 5
- 1.1.3.1 Pressure p. 6
- 1.1.3.2 Volume p. 6
- 1.1.3.3 Equations of State p. 7
- 1.2 Dimensional Equation p. 7
- 1.3 Tips for Solving Engineering Problems p. 8
- 1.4.1 Law of Conservation p. 10
- 1.4.2 Chemical Reactions p. 12
- 1.4.3 Material Balances p. 14
- 1.1.2.2 Temperature p. 4
- 1.4 Conservation of Mass p. 10
- Problems p. 20
- Chapter 2 A Review of Thermodynamic Concepts p. 23
- 2.1 First Law of Thermodynamics p. 23
- 2.1.1 Closed Systems p. 23
- 2.1.2 Steady Flow Processes p. 24
- 2.2 Second Law of Thermodynamics p. 25
- 2.2.1 Reversible Processes p. 26
- 2.3 Properties p. 27
- 2.3.1 Heat Capacity p. 27
- 2.3.2 Calculating the Change in Entropy p. 28
- 2.3.2.1 Entropy Change of an Ideal Gas p. 28
- 2.3.3 Gibbs and Helmholtz Free Energy p. 30
- 2.3.3.1 Gibbs Free Energy p. 30
- 2.3.3.2 Helmholtz Free Energy p. 30
- 2.4 Fundamental Property Relations p. 31
- 2.4.1 Exact Differentials p. 31
- 2.5 Single Phase Open Systems p. 33
- 2.5.1 Partial Molar Properties p. 33
- 2.5.1.1 Binary Systems p. 35
- 2.5.1.2 Property Changes of Mixing p. 35
- 2.5.1.3 Ideal Gas p. 35
- 2.5.1.4 Gibbs Free Energy of an Ideal Gas Mixture p. 38
- 2.5.2 Pure Component Fugacity p. 38
- 2.5.2.1 Calculating the Pure Component Fugacity p. 39

- 2.5.3 Fugacity of a Component in a Mixture p. 41
- 2.5.4 Ideal Solution p. 42
- 2.6 Phase Equilibrium p. 43
- 2.6.1 Pure Component Phase Equilibrium p. 45
- 2.6.1.1 Fugacity of a Pure Component as a Compressed Liquid p. 47
- 2.6.2 Excess Properties p. 48
- 2.6.3 Applications of Equilibrium Thermodynamics p. 51
- 2.6.3.1 Solubility of a Solid in a Liquid Solvent p. 51
- 2.6.3.2 Depression of the Freezing Point of a Solvent by a Solute p. 56
- 2.6.3.3 Equilibrium between a Solid and a Gas Phase p. 57
- 2.6.3.4 Solubility of a Gas in a Liquid p. 59
- 2.6.3.5 Osmotic Pressure p. 62
- 2.6.3.6 Distribution of a Solute between Two Liquid Phases p. 65
- 2.6.3.7 Vapor-Liquid Equilibrium p. 70
- 2.6.3.8 Flammability Limits p. 74
- 2.6.3.9 Thermodynamics of Surfaces p. 76
- 2.6.3.10 Equilibrium Dialysis p. 79
- 2.6.3.11 Gibbs-Donnan Effect p. 84
- 2.6.3.12 Donnan Potential p. 87
- 2.6.3.13 Chemical Equilibrium in Ideal Aqueous Solutions p. 89
- Problems p. 94
- Chapter 3 Physical Properties of the Body Fluids and the Cell Membrane p. 101
- 3.1 Body Fluids p. 101
- 3.2 Fluid Compositions p. 102
- 3.3 Capillary Plasma Protein Retention p. 102
- 3.4 Osmotic Pressure p. 104
- 3.4.1 Osmolarity p. 105
- 3.4.2 Calculating the Osmotic Pressure p. 105
- 3.4.3 Other Factors That May Affect the Osmotic Pressure p. 106
- 3.5 Formation of the Interstitial Fluid p. 106
- 3.6 Net Capillary Filtration Rate p. 108
- 3.7 Lymphatic System p. 110
- 3.8 Solute Transport across the Capillary Endothelium p. 110
- 3.9 Cell Membrane p. 111
- 3.10 Ion Pumps p. 116
- Problems p. 117
- Chapter 4 The Physical and Flow Properties of Blood and Other Fluids p. 121
- 4.1 Physical Properties of Blood p. 121
- 4.2 Cellular Components p. 121
- 4.3 Rheology p. 121
- 4.4 Relationship between Shear Stress and Shear Rate p. 125
- 4.5 Hagen-Poiseuille Equation p. 127
- 4.6 Other Useful Flow Relationships p. 128
- 4.7 Rheology of Blood p. 129
- 4.8 Casson Equation p. 131
- 4.9 Using the Casson Equation p. 132

- 4.10 Velocity Profile for Tube Flow of a Casson Fluid p. 134
- 4.11 Tube Flow of Blood at Low Shear Rates p. 134
- 4.12 Effect of Diameter at High Shear Rates p. 134
- 4.13 Marginal Zone Theory p. 136
- 4.14 Using the Marginal Zone Theory p. 138
- 4.15 Boundary Layer Theory p. 141
- 4.15.1 Flow near a Wall That is Set in Motion p. 141
- 4.15.2 Laminar Flow of a Fluid along a Flat Plate p. 146
- 4.16 Generalized Mechanical Energy Balance Equation p. 151
- 4.17 Capillary Rise and Capillary Action p. 159
- 4.17.1 Equilibrium Capillary Rise p. 159
- 4.17.2 Dynamics of Capillary Action p. 161
- Problems p. 164
- Chapter 5 Solute Transport in Biological Systems p. 175
- 5.1 Description of Solute Transport in Biological Systems p. 175
- 5.2 Capillary Properties p. 175
- 5.3 Capillary Flow Rates p. 175
- 5.4 Solute Diffusion p. 177
- 5.4.1 Fick's First Law and Diffusivity p. 177
- 5.4.2 Fick's Second Law p. 179
- 5.4.3 Solution for the Concentration Profile for Diffusion from a Flat Plate into a Quiescent Fluid p. 180
- 5.4.4 Definition of the Solute Flux p. 181
- 5.4.5 Definition of the Mass Transfer Coefficient p. 181
- 5.4.6 Mass Transfer in Laminar Boundary Layer Flow over a Flat Plate p. 184
- 5.4.7 Mass Transfer from the Walls of a Tube Containing a Fluid in Laminar Flow p. 189
- 5.4.8 Mass Transfer Coefficient Correlations p. 194
- 5.5 Solute Transport by Capillary Filtration p. 198
- 5.6 Solute Diffusion within Heterogeneous Media p. 203
- 5.6.1 Diffusion of a Solute from a Polymeric Material p. 208
- 5.6.1.1 A Solution Valid for Short Contact Times p. 211
- 5.6.2 Diffusion in Blood and Tissue p. 213
- 5.7 Solute Permeability p. 215
- 5.8 Irreversible Thermodynamics of Membrane Transport p. 217
- 5.8.1 Finding  $L_p$ ,  $P_m$ , and  $\zeta$  p. 219
- 5.8.2 Multicomponent Membrane Transport p. 220
- 5.9 Transport of Solutes across the Capillary Wall p. 221
- 5.10 Transport of a Solute between a Capillary and the Surrounding Tissue Space p. 225
- 5.10.1 The Krogh Tissue Cylinder p. 225
- 5.10.2 A Model of the Krogh Tissue Cylinder p. 226
- 5.10.2.1 Comparison of Convection and Diffusion Effects p. 231
- 5.10.3 The Renkin-Crone Equation p. 231
- 5.10.3.1 Determining the Value of  $P_m S$  p. 232
- 5.10.4 Solute Transport in Vascular Beds, the Well-Mixed Assumption p. 234
- Problems p. 236

- Chapter 6 Oxygen Transport in Biological Systems p. 245
- 6.1 Diffusion of Oxygen in Multicellular Systems p. 245
- 6.2 Hemoglobin p. 245
- 6.3 Oxygen-Hemoglobin Dissociation Curve p. 247
- 6.4 Oxygen Levels in Blood p. 247
- 6.11 Approximate Solution for Oxygen Transport in the Krogh Tissue Cylinder p. 268
- 6.5 The Hill Equation p. 248
- 6.6 Other Factors That Can Affect the Oxygen Dissociation Curve p. 250
- 6.9 Steady State Oxygen Transport in a Perfusion Bioreactor p. 261
- 6.7 Tissue Oxygenation p. 250
- 6.8 Oxygen Transport in Bioartificial Organs and Tissue-Engineered Constructs p. 255
- 6.10 Oxygen Transport in the Krogh Tissue Cylinder p. 265
- 6.12 Artificial Blood p. 272
- Problems p. 276
- Chapter 7 Pharmacokinetic Analysis p. 281
- 7.1 Terminology p. 281
- 7.2 Entry Routes for Drugs p. 281
- 7.3 Modeling Approaches p. 283
- 7.4 Factors Affecting Drug Distribution p. 284
- 7.4.3 Renal Excretion of the Drug p. 289
- 7.5 Drug Clearance p. 290
- 7.5.1 Renal Clearance p. 290
- 7.5.2 Plasma Clearance p. 292
- 7.5.3 Biological Half-Life p. 293
- 7.6 Model for Intravenous Injection of Drug p. 293
- 7.7 Accumulation of Drug in the Urine p. 294
- 7.8.1 Application to Controlled Release of Drugs by Osmotic Pumps p. 297
- 7.8.2 Application to the Transdermal Delivery of Drugs p. 299
- 7.9 First Order Drug Absorption and Elimination p. 302
- 7.10 Two Compartment Model p. 306
- 7.10.1 Two Compartment Model for an Intravenous Injection p. 306
- 7.10.2 Two Compartment Model for First Order Absorption p. 310
- Problems p. 312
- 7.4.1 Drug Distribution Volumes p. 284
- 7.4.2 Drug Metabolism p. 288
- 7.8.2.1 Predicting the Permeability of Skin p. 301
- 7.8 Constant Infusion of Drug p. 295
- Chapter 8 Extracorporeal Devices p. 319
- 8.1 Applications p. 319
- 8.2 Contacting Schemes p. 319
- 8.3 Membrane Solute Transport p. 321
- 8.4 Estimating the Mass Transfer Coefficients p. 322
- 8.5 Estimating the Solute Diffusivity in Blood p. 323
- 8.6 Hemodialysis p. 325
- 8.6.1 Background p. 325
- 8.6.2 Dialysate Composition p. 326

- 8.6.3 Role of Ultrafiltration p. 326
- 8.6.4 Clearance and Dialysance p. 328
- 8.6.5 Solute Transfer p. 329
- 8.6.6 Single Compartment Model of Urea Dialysis p. 332
- 8.6.7 Peritoneal Dialysis p. 332
- 8.6.8 Aquapheresis p. 335
- 8.7 Blood Oxygenators p. 336
- 8.7.1 Background p. 336
- 8.7.2 Operating Characteristics of Blood Oxygenators p. 336
- 8.7.3 Types of Oxygenators p. 338
- 8.7.4 Analysis of a Membrane Oxygenator, Oxygen Transfer p. 339
- 8.7.5 Analysis of a Membrane Oxygenator, Carbon Dioxide Transfer p. 343
- 8.7.6 Example Calculations for Membrane Oxygenators p. 346
- 8.8 Immobilized Enzyme Reactors p. 347
- 8.8.1 Background p. 347
- 8.8.2 Examples of Medical Application of Immobilized Enzymes p. 347
- 8.8.3 Enzyme Reaction Kinetics p. 349
- 8.8.4 Reaction and Diffusion in Immobilized Enzyme Systems p. 352
- 8.8.5 Solving the Immobilized Enzyme Reaction-Diffusion Model p. 354
- 8.8.6 Special Case of a First Order Reaction p. 355
- 8.8.7 Observed Reaction Rate p. 356
- 8.8.8 External Mass Transfer Resistance p. 356
- 8.8.9 Reactor Design Equations p. 357
- 8.8.9.1 Packed Bed Reactor p. 357
- 8.8.9.2 Well-Mixed Reactor p. 358
- 8.9 Affinity Adsorption p. 361
- Problems p. 365
- Chapter 9 Tissue Engineering p. 369
- 9.1 Introduction p. 369
- 9.2 Cell Transplantation p. 369
- 9.3 Extracellular Matrix p. 372
- 9.3.1 Glycosaminoglycans p. 373
- 9.3.2 Collagens p. 374
- 9.3.3 Elastin p. 374
- 9.3.4 Fibronectin p. 374
- 9.3.5 Basement Membrane p. 374
- 9.4 Cellular Interactions p. 375
- 9.4.1 Cadherins p. 376
- 9.4.2 Selectins p. 376
- 9.4.3 Cell Adhesion Molecules p. 376
- 9.4.4 Integrins p. 376
- 9.4.5 Cytokines and Growth Factors p. 377
- 9.5 Polymeric Support Structures p. 378
- 9.8 Measuring Blood Flow within Scaffolds Used for Tissue Engineering p. 386
- 9.9 Cell Transplantation into Polymeric Support Structures p. 387
- Problems p. 392

- Chapter 10 Bioartificial Organs p. 395
- 10.1 Background p. 395
- 10.2 Some Immunology p. 395
- 10.2.1 B Lymphocytes p. 396
- 10.2.2 Antibodies p. 396
- 10.2.3 T Lymphocytes p. 398
- 10.2.4 Interaction between APCs, B Cells, and T Cells p. 399
- 10.2.5 Immune System and Transplanted Cells p. 400
- 10.3 Immunoisolation p. 401
- 10.4 Permeability of Immunoisolation Membranes p. 403
- 10.5 Membrane Sherwood Number p. 406
- 10.6 Examples of Bioartificial Organs p. 406
- 10.6.1 Bioartificial Pancreas p. 407
- 10.6.1.1 Bioartificial Pancreas Approaches p. 408
- 10.6.1.2 Intravascular Devices p. 409
- 10.6.1.3 Microencapsulation p. 411
- 10.6.1.4 Macroencapsulation p. 413
- 9.6 Biocompatibility and Initial Response to an Implant p. 382
- 9.7 Tissue Ingrowth in Porous Polymeric Structures p. 383
- 9.10 Bioreactor Design for Tissue Engineering p. 389
- 10.6.1.5 Organoid p. 415
- 10.6.2 Number of Islets Needed p. 415
- 10.6.3 Islet Insulin Release Model p. 416
- 10.6.4 Pharmacokinetic Modeling of Glucose and Insulin Interactions p. 418
- 10.6.5 Using the Pharmacokinetic Model to Evaluate the Performance of a Bioartificial Pancreas p. 421
- 10.7 Bioartificial Liver p. 424
- 10.7.1 Artificial Liver Systems p. 425
- 10.7.2 Bioartificial Livers p. 426
- 10.7.3 Examples of Extracorporeal Bioartificial Livers p. 427
- 10.8 The Bioartificial Kidney p. 431
- 10.9 Design Considerations for Bioartificial Organs p. 434
- Problems p. 435
- References p. 437
- Index p. 451
