

Table of Contents

- Introduction to Food Packaging
- Definitions
- Package Environments
- Packaging Innovation
- Finding Information
- Functions of Packaging
- Functions/Environment Grid
- Structure and Related Properties of Plastic Polymers
- History
- Factors Influencing Polymer Structures and Related Properties
- Edible, Biobased and Biodegradable Food Packaging Materials
- Biobased and Biodegradable Packaging Materials
- Edible Packaging Materials
- Environmental Aspects
- Future Trends
- Optical, Mechanical and Barrier Properties of Thermoplastic Polymers
- Tensile Properties
- Impact Strength
- Tear Strength
- Stiffness
- Optical Properties
- Bursting Strength
- Crease or Flex Resistance
- Coefficients of Friction
- Blocking
- Orientation and Shrinkage
- Barrier Properties
- Processing and Converting of Thermoplastic Polymers
- Extrusion
- Calendering
- Coating and Laminating
- Blending
- Vapor Deposition
- Nanocomposites
- Orientation
- Cross-Linking
- Microperforation
- Injection Molding
- Blow Molding
- Thermoforming
- Foamed (Cellular) Plastics
- Paper and Paper-Based Packaging Materials
- Pulp
- Paper

- Paperboard Products
- Metal Packaging Materials
- Manufacture of Tinplate
- Manufacture of ECCS
- Manufacture of Aluminum
- Container-Making Processes
- Aluminum Foils and Containers
- Corrosion of Metal Packaging Materials
- Glass Packaging Materials
- Composition and Structure
- Physical Properties
- Manufacture
- Glass Container Design
- Closures for Glass Containers
- Printing Processes, Inks, Adhesives and Labeling of Packaging Materials
- Printing Processes
- Inks
- Adhesives
- Labeling
- Coding
- Food Packaging Closures and Sealing Systems
- Closures for Glass and Plastic Containers
- Heat Sealing
- Peelable Seals
- Cold Seals
- Deteriorative Reactions in Foods
- Deteriorative Reactions in Foods
- Intrinsic Factors Controlling the Rates of Deteriorative Reactions
- Shelf Life of Foods
- Definitions
- Shelf Life Determination
- Determining Shelf Life from the Product Side
- Accelerated Shelf Life Testing
- Determining Shelf Life from the Consumer Side
- Shelf Life Devices
- Some Cautionary Advice
- Aseptic Packaging of Foods
- Sterilization of Packaging Material Food Contact Surfaces
- Rates of Deteriorative Reactions
- Extrinsic Factors Controlling the Rates of Deteriorative Reactions
- Predicting Microbial Shelf Life
- Aseptic Packaging Systems
- Packaging of Microwavable Foods
- Effect of Food Product
- Packaging
- Conclusion

- Historical Development
- Definitions
- Active Packaging Systems
- Intelligent Packaging
- Safety and Regulatory Issues
- Integrity Testing of Aseptic Packages
- Basic Principles
- Active and Intelligent Packaging
- Conclusions
- Modified Atmosphere Packaging
- Principles
- Gases Used in MAP
- Methods of Creating MA Conditions
- Equipment for MAP
- Packaging for MAP Applications
- Microbiology of MAP
- Safety of MAP
- Applications of MAP
- Packaging of Flesh Foods
- Red Meat
- Cured and Cooked Meats
- Packaging of Horticultural Products
- Postharvest Physiology
- Packaging of Horticultural Products
- Refrigerated, Pasteurized Foods with Extended Durability and Sous Vide
- Poultry
- Modified Atmosphere Packaging of Fresh Horticultural Produce
- Seafood
- Packaging of Dairy Products
- Fluid Milk
- Fermented Products
- Butter and Spreads
- Cheese
- Milk Powders
- Packaging of Cereals, Snack Foods and Confectionery
- Grains
- Pastas
- Bakery Products
- Snack Foods
- Confectionery
- Packaging of Beverages
- Water
- Carbonated Soft Drinks
- Coffee
- Tea
- Beer

- Wine
- Breakfast Cereals
- Juices
- Legislative and Safety Aspects of Food Packaging
- Regulatory Considerations
- Plastics Packaging
- Metal Packaging
- Paper Packaging
- Glass Packaging
- Taints and Off-Flavors
- Traceability
- Food Packaging and Sustainability
- Waste Management Options
- Life Cycle Assessment
- Packaging and Environmental Policies
- Packaging and Sustainability
