

Table of contents

- **1 Introduction** (p. 1)
- **1.1 Background** (p. 1)
- **1.2 What is Mechatronics?** (p. 1)
- **1.2.2 Mechatronics and Manufacturing** (p. 5)
- **1.2.3 Mechatronics and Education** (p. 7)
- **1.3 Mechatronics and a Sustainable Future** (p. 9)
- **1.3.1 Sustainability** (p. 9)
- **1.3.2 Mechatronics and Sustainability** (p. 11)
- **1.4 The Book** (p. 13)
- **References** (p. 14)
- **2 Consumption to Contribution: Sustainable Technological Development Through Innovation** (p. 19)
- **2.1 Introduction** (p. 19)
- **2.2 The Interpretation of Meaning for Sustainability and Innovation** (p. 20)
- **2.3 Deconstructing Technological Innovation as a Driving Force for Sustainable Engineered Systems** (p. 21)
- **2.4 Forecasting, Foresight and Technology Assessment** (p. 23)
- **2.5 The Influence and Impact of Information and Communication Technologies** (p. 24)
- **2.6 Consumption, Obsolescence and Moves Towards Future Proofing** (p. 26)
- **2.7 Complexity Paradigms within a Sustainability Context** (p. 28)
- **2.8 Rationalising Material Selection and Processing** (p. 29)
- **2.9 Conclusion - From Responsible Design to Resource Recovery** (p. 31)
- **References** (p. 34)
- **3 The "Revolution": a Small Company Revived** (p. 43)
- **3.1 Some History of the UK Industry-Academic Link, the "KTP"** (p. 43)
- **3.2 Some Observations on the Acceptance of Computer-aided Engineering (CAE) in Smaller Companies** (p. 44)
- **3.3.1 Problem or Opportunity?** (p. 45)
- **3.3.2 The "Revolution"** (p. 49)
- **3.3.3 Further Benefits Demonstrated in the CAE Application** (p. 51)
- **3.4 Conclusions** (p. 53)
- **References** (p. 54)
- **4 A Mechatronic Design Process and its Application** (p. 55)
- **4.1 Introduction to Mechatronic Design** (p. 55)
- **4.2 Mechatronic Design Process Model** (p. 55)
- **4.3 A Mechatronic Case Study** (p. 59)
- **4.3.1 Mechatronic System Design Problem Description** (p. 59)
- **4.3.2 Design Concept Development** (p. 59)
- **4.3.3 Detailed Design** (p. 61)
- **4.3.4 Electronic Control Unit** (p. 67)
- **4.4 Conclusions** (p. 69)
- **References** (p. 70)
- **5 A Mechatronic Design of a Circular Warp Knitting Machine** (p. 71)

- **5.1 Introduction** (p. 71)
- **5.2 Warp Knitting Cycle** (p. 72)
- **5.3 Circular Warp Knitting Machine Concept** (p. 73)
- **5.4 The Needle Reciprocating Mechanism** (p. 75)
- **5.5 The Patterning Mechanism** (p. 75)
 - **5.5.1 Servo Motor Selection** (p. 76)
- **5.6 The Prototype** (p. 78)
 - **5.6.1 Servo-controlled Needle Motion** (p. 79)
 - **5.6.2 The Yarn Feed Mechanism** (p. 80)
 - **5.6.3 Truncated-cone Optimisation** (p. 80)
- **5.7 Conclusions** (p. 80)
- **Acknowledgements** (p. 81)
- **References** (p. 81)
- **6 Mechatronics and the Motor Car** (p. 83)
 - **6.1 Background** (p. 83)
 - **6.1.1 Vehicle Mechatronic Systems** (p. 83)
 - **6.1.2 Drivers for Change** (p. 86)
 - **6.2 Engine Basics** (p. 88)
 - **6.3 The Mechanical Solution for Ignition Timing and Fuel Delivery** (p. 89)
 - **6.3.1 Traditional Mechanical Ignition Timing** (p. 89)
 - **6.3.2 Fuel Delivery - the Carburettor** (p. 90)
 - **6.4 The Mechatronic Solution to Engine Management** (p. 92)
 - **6.4.1 Sensors** (p. 92)
 - **6.4.2 Actuators** (p. 93)
 - **6.4.3 Processing** (p. 94)
 - **6.5 Anti-lock Braking System (ABS)** (p. 97)
 - **6.5.1 Background to the Theory of Braking** (p. 97)
 - **6.5.2 ABS Components** (p. 99)
 - **6.5.3 ABS Diagnostics** (p. 101)
 - **6.6 Conclusions** (p. 101)
 - **References** (p. 101)
- **7 Multi-mode Operations Marine Robotic Vehicle - a Mechatronics Case Study** (p. 103)
 - **7.1 Introduction** (p. 104)
 - **7.2 MPPT Ring System Overview** (p. 105)
 - **7.2.1 Main Features** (p. 105)
 - **7.2.2 The Virtual Underwater Laboratory** (p. 107)
 - **7.2.3 Architecture and Implementation** (p. 108)
 - **7.2.4 Imaging Sonar Simulator** (p. 110)
 - **7.2.5 Laboratory Configuration** (p. 111)
 - **7.3 University of Limerick (UL) Thrusted Pontoon/ROV** (p. 112)
 - **7.3.1 Base Vehicle** (p. 112)
 - **7.3.2 High-resolution Imaging Tool Skid** (p. 114)
 - **7.3.3 Onboard Electronics and Computer Control** (p. 114)
 - **7.3.4 Fault Tolerant Thruster Control** (p. 115)
 - **7.3.5 Autotuning of Low-level Controllers** (p. 116)

- **7.3.6 High Frequency Sonar Enabling at Seabed Operation** (p. 117)
- **7.3.7 Interchangeable Inshore and Deep Water Winch System** (p. 118)
- **7.4 System Testing** (p. 118)
- **7.5 Conclusions** (p. 118)
- **References** (p. 119)
- **8 Wireless Communication Technology for Modular Mechatronic Controllers** (p. 121)
- **8.1 Introduction** (p. 121)
- **8.2 Modular Mechatronic Controllers** (p. 122)
- **8.3 Communications Technology** (p. 124)
- **8.4 Model-based Mechatronic Controllers** (p. 125)
- **8.5 Wireless Mechatronic Controller for the Camera Platform** (p. 128)
- **8.5.1 Requirements for the Wireless Mechatronic Controller** (p. 129)
- **8.6 Modelling of the Camera Platform** (p. 130)
- **8.7 Results** (p. 132)
- **8.7.1 Performance of the System** (p. 133)
- **8.8 Conclusions** (p. 134)
- **References** (p. 134)
- **9 The Utility Function Method for Behaviour Selection in Autonomous Robots** (p. 135)
- **9.1 Introduction** (p. 135)
- **9.2 Behaviour Selection** (p. 136)
- **9.3 The Concept of Utility** (p. 137)
- **9.3.1 A Biological Example** (p. 139)
- **9.4 The Utility Function Method** (p. 141)
- **9.4.1 Motivation** (p. 141)
- **9.4.2 Method** (p. 141)
- **9.4.3 Optimisation Procedure** (p. 146)
- **9.4.4 Application Example - a Transportation Task** (p. 151)
- **9.5 Ongoing Work** (p. 154)
- **9.5.1 Extended UF Method** (p. 154)
- **9.5.2 Data Preprocessing and Artificial Emotions** (p. 154)
- **References** (p. 155)
- **10 Force Sensing in Medical Robotics** (p. 157)
- **10.1 Background** (p. 157)
- **10.2 Force Sensing Techniques in Medical Robotics** (p. 159)
- **10.3 The Use of Force Sensing in Medical Robotics** (p. 163)
- **10.3.1 Haptic Feedback During Robotic Surgery** (p. 163)
- **10.3.2 Soft Tissue Diagnosis Through Tissue Mechanical Property Identification** (p. 164)
- **References** (p. 171)
- **11 Intelligent Prostheses - a Biomechatronics Approach** (p. 173)
- **11.1 Introduction** (p. 173)
- **11.2 Biomechatronics and Biological Systems** (p. 174)
- **11.2.1 Biomechatronics** (p. 174)
- **11.2.2 The Human Body** (p. 175)

- **11.3 Prosthetics** (p. 175)
- **11.3.1 Human Locomotion** (p. 177)
- **11.3.2 Current Prosthetics** (p. 179)
- **11.3.3 Future Prosthetics** (p. 191)
- **11.4 Conclusions** (p. 193)
- **References** (p. 193)
- **12 Education in Mechatronics** (p. 197)
- **12.1 Introduction and Background** (p. 197)
- **12.2 The Development of the Master of Science in Mechatronics Systems Engineering at Lawrence Technological University** (p. 203)
- **12.2.1 Rational for Course Development** (p. 203)
- **12.2.2 Programme Structure and Implementation** (p. 206)
- **12.3 Summary** (p. 216)
- **References** (p. 217)
- **13 Mechatronics Education** (p. 219)
- **13.1 Introduction** (p. 219)
- **13.2 Historical Context** (p. 220)
- **13.3 Curriculum** (p. 222)
- **13.3.1 Mechatronic Designer Programme** (p. 223)
- **13.3.2 BSc Curriculum** (p. 224)
- **13.3.3 MSc Curriculum** (p. 228)
- **13.4 Modelling of Mechatronic Systems** (p. 229)
- **13.4 Conclusions** (p. 231)
- **References** (p. 232)
- **14 A Personal View of the Early Days of Mechatronics in Relation to Aerospace** (p. 235)
- **15 Mechatronic Futures** (p. 241)
- **15.1 Introduction** (p. 241)
- **15.2 Challenges** (p. 242)
- **15.3 Home Based Technologies** (p. 243)
- **15.4 Medicine and eHealth** (p. 244)
- **15.5 Transportation** (p. 245)
- **15.6 Manufacturing, Automation and Robotics** (p. 246)
- **15.7 Communications** (p. 247)
- **15.8 Nanotechnologies** (p. 247)
- **15.9 Advanced Algorithms** (p. 248)
- **15.10 Artificial Intelligence** (p. 248)
- **15.11 Conclusions** (p. 249)
- **References** (p. 249)
- **Authors** (p. 251)
- **3.3 The Ducker Engineering Case Study** (p. 45)
- **1.2.1 Mechatronics and Design Innovation** (p. 4)
