Part A—Principles

1. Historical Background of Lasers

1.1	Introduction	3
1.2	Radiation and Waves	3
1.3	Earlier Experiments with Radio Waves	4
1.4	Emergence of Laser Era	4
1.5	Pre-laser Optics	5
1.6	Lasers Today	5
1.7	Study of Light	5
1.8	Theories on the Nature of Light	5
1.9	Corpuscular Theory of Light	6
1.10	Wave Theory of Light	6
1.11	Albert Einstein—Stimulated Emission	7
1.12	Post Second World War Experiments	7
1.13	Emergence of Maser	8
	Worked Out Examples	9
	Tutorial Exercise	12
	References and Suggested Reading	12

2. Review of Some Optical Principles

2.1	Reflection and Associated Principles	14
2.2	Refraction and Associated Principles	21
2.3	Illumination and Photometry	27
2.4	Photometric Units and Quantities	29
2.5	Calculation of Solid Angle	30
2.6	Astigmatism	31
2.7	Aplanatic Points of a Spherical Surface	34
2.8	How to Remove/Minimise Astigmatism	37
2.9	Snell's Analysis	38
2.10	Brewster's Law and his Analysis	38
2.11	Kerr Effect	41

2.12	Kerr Electro-optic Effect	41
2.13	Kerr Magneto-optic Effect	43
2.14	Pockels Effect and Pockel Cells	43
2.15	Zeeman Effect	44
2.16	Stark Effect	45
2.17	Stokes' Shift and Photoluminescence	47
2.18	Fluorescence of Solids and Liquids	52
2.19	Fresnel's Analysis	52
2.20	Fresnel Biprism Experiment	53
2.21	Fresnel Diffraction and Half-period Zones	55
2.22	Fresnel Dragging Coefficient	57
2.23	Fresnel Integrals and Cornu's Spiral	58
2.24	Cornu's Spiral	62
2.25	Fresnel's Number	66
2.26	Fraunhofer's Analysis	66
2.27	Diffraction Grating	68
2.28	Principles of Diffraction Gratings	69
2.29	Primary Maxima	70
2.30	Secondary or Subsidiary Maxima and Minima	71
2.31	Absorption Spectra of Atoms and Fraunhofer Lines	73
2.32	Doppler Effect	74
2.33	Observer At Rest: Source in Motion	74
2.34	Observer Moving: Source at Rest	75
2.35	Both Observer And Source in Motion	75
2.36	Optical Holography	76
	Worked Out Examples	83
	Tutorial Exercise	86
	References and Suggested Readings	87
3.	Basic Principles of Modern Physics—A Brief Review	89
3.1	Black Bodies	90
3.2	Atomic Structure	95
3.3	Spectral Series of Hydrogen Atom	97
3.4	Elliptical Orbits	102
3.5	The General Nature of Spectra	104
3.6	Molecular Spectra	104
3.7	Pauli's Exclusion Principle	105
3.8	X-rays	107
3.9	Origin of X-rays and Moseley's Law	108
3.10	Significance of Moseley's Law	111
3.11	Diffraction of X-rays	111
3.12	Bragg's Law	112
3.13	Polarisation, Absorption and Fluorescence of X-rays	113

3.14	Polarisation of X-rays	113
3.15	Absorption of X-rays	114
3.16	Fluorescence of X-rays	115
3.17	Scattering of X-rays and Thomson's Law	117
3.18	Photoelectric Effect	120
3.19	Compton Effect	121
3.20	Energy Distribution in Electrons	123
3.21	Probability of Distribution of Free Electrons	125
3.22	Process of Conduction in Metals Under An Electromagnetic Field	125
3.23	Free Electrons in Metals	127
3.24	Energy Levels in Free Electrons	128
3.25	Raman Effect	129
3.26	Stimulated Raman Scattering	132
3.27	The Dual Nature of Matter and Waves	134
3.28	Wave/Particle Dualism	134
3.29	De-broglie Model of Atom	135
3.30	De-broglie's Atomic Structure	135
3.31	Heisenberg's Uncertainty Principle	137
3.32	Schrodinger Wave Equation	138
3.33	Physical Importance of Worked Out Examples Tutorial Exercise References and Suggested Reading	144 146 152 154
4.	Elements of Laser Physics	156
4.1	Basic Steps	156
4.2	Physical Principles	156
4.3	Spontaneous Emission	157
4.4	Stimulated Emission	158
4.5	Absorption	159
4.6	Significance of Einstein Coefficients	160
4.7	Active Material	162
4.8	Population Inversion	163
4.9	Laser Medium	163
4.10	Coefficient of Gain	163
4.11	Pumping and Pumping Schemes	164
4.12	Hold-alive Discharge Circuit	165
4.13	Pseudo Simmer Discharge	166
4.14	Resonant Cavity	166
4.15	Oscillator Versus Amplifier Worked Out Examples Tutorial Exercise References and Suggested Reading	166 166 168 171 171

5. Basic Characteristics of Light Rays	173
5.1 Tracing of A Ray	173
5.2 Matrix of The Ray	173
5.3 Some Typical Ray Matrices	175
5.4 Application of Ray-tracing in an Optical Resonator	177
5.5 What Happens in a Generalised Spherical Resonator	179
5.6 Stable and Unstable Resonators	180
5.7 Stable Resonator	180
5.8 Unstable Resonator—A Peripheral Look	181
5.9 Ray Tracing in a Stable Cavity	186
5.10 Repetitive Rays	189
Worked Out Examples	189
Tutorial Exercise	192
References and Suggested Readings	193
6. Properties of Lasers	195
6.1 Different Beams of Light	195
6.2 Characteristics of Laser Beams	195
6.3 Coherence	195
6.4 Spatial Coherence	196
6.5 Temporal Coherence	198
6.6 Relation Between Size of the Source and Coherence of the Field	199
6.7 Relation Between Coherence and Monochromaticity	201
6.8 Brightness and Intensity	202
6.9 Directionality	204
6.10 Monochromaticity	207
6.11 Focusability	208
Worked Out Examples	209
Tutorial Exercise	212
References and Suggested Reading	213
7. Laser Transitions	214
7.1 Role of Electrons in Laser Transition	214
7.2 Bound Electrons	215
7.3 A Re-look At Emissions	216
7.4 Resonating Cavity	216
7.5 Levels of Laser Action	218
7.6 Two Level Lasers	218
7.7 Three Level Laser	219
7.8 Four Level Laser	219
7.9 Rate Dynamics Analysis of a Four-level Scheme	220

7.10	Optimum Level of Output Power	226
7.11	Suitable Conditions for Oscillation	228
7.12	Efficient Laser	229
7.13	Quality Factor In Cavities	231
	Worked Out Examples	232
	Tutorial Exercise	235
	References and Suggested Readings	235
8.	Laser Processes and Features	237
8.1	Q-switching—General Concepts	237
8.2	Q-switching Operations	240
8.3	Slow Switching	240
8.4	Fast Switching	240
8.5	Q-switching Devices	240
8.6	Mechanical Shutters	240
8.7	Electro-optical Shutter	241
8.8	Acousto-optic Shutters	242
8.9	Shutters Using Saturable Dyes or Absorbers	243
8.10	Propagation of a Gaussian Beam and Transverse Modes	245
8.11	Mode-locking	249
8.12	Types of Mode-locking	252
8.13	Active Mode-locking	252
8.14	Passive Mode-locking	252
8.15	Regenerative Pulse Generator	254
8.16	Longitudinal Mode-locking	255
8.17	Transverse Mode-locking	256
8.18	Simultaneous Locking of Longitudinal and Transverse Modes	257
8.19	Techniques of Mode-locking	258
8.20	Active Mode-locking (A Re-look)	259
8.21	Passive Mode-locking (A Re-look)	260
8.22	Mode-locking With Kerr Lens	263
8.23	Cavity Dumping	265
8.24	Line-broadening	267
8.25	Doppler Line Broadening	269
8.26	Influence of Cavity Modes on the Profile of Gain Medium	272
8.27	Brewster Angle Windows Inside the Laser Cavity	274
8.28	Laser Mode Characteristics	275
8.29	Spatial Dependence	275
8.30	Dependence on Frequency	275
8.31	Mode Competition	275
8.32	Hole Burning	276
8.33	Spectral Hole Burning	277
8.34	Spatial Hole Burning	278

8.35	Spiking	279
	Worked Out Examples	282
	Tutorial Exercise	291
	References and Suggested Reading	292
9.	Emissive Properties and Energy States of Laser Media	293
9.1	Coverage	293
9.2	Valence Bonds	293
9.3	Energy Levels In Molecules	296
9.4	Franck-condon Principle	299
9.5	Classes of Certain Simple Molecules	300
9.6	Linear Molecules and Their Rotational Energy Levels	302
9.7	Symmetric-top Molecules and Rotational Energy Levels	303
9.8	Vibrational Levels of Energies	303
9.9	Rotational-vibrational Transitions	304
9.10	Electronic Transitions	304
9.11	Spin of Electrons	304
9.12	Selection Rules for Transitions	305
9.13	Energy Levels In Excimer Molecules	309
9.14	Energy Levels In Liquid (Organic Dye Lasers) and their Radiation Characteristics	311
9.15	Behaviour of Dye Molecules During Excitation & Emission	316
9.16	Negative Effect of Triplet States of Dye Molecule	316
9.17	Dielectric Solids and Their Energy Levels	317
9.18	Host Media	318
9.19	Characteristics of Dopant Ions	319
9.20	Energy Levels In Semiconductor Materials	321
9.21	Properties of Semiconductors	321
9.22	Energy Levels In Conducting, Insulating and Semiconducting Materials	324
9.23	Excitation and Decay of Energy Levels	326
9.24	RArrangements of Conduction and Valence BANBands In Semiconductors	327
9.25	Distribution of Density-of-states	329
9.26	Intrinsic and Extrinsic Semiconductors	330
	Worked Out Examples	331
	Tutorial Exercise	337
	References and Suggested Readings	338
10.	Principles and Techniques of Laser Excitation	339
10.1	CExcitation or Pumping Threshold Parameters	339
10.2	CExcitation Methods	345
10.3	Direct Pumping	346

10.4	Problems Encountered In Direct Pumping	347
10.5	Population Inversion by Indirect Pumping	349
10.6	A Transfer From Below	349
10.7	A Transfer Across	350
10.8	A Transfer From Top	351
10.9	M Pumping Geometries In Optical Pumping PRO Process	356
10.10	Pumping Efficiency	360
10.11	Transverse Pumping	361
10.12	Longitudinal (End) Pumping	363
10.13	Advantages of End Pumping	364
10.14	Particle Pumping (Electrical Pumping)	364
10.15	Electron Collisional Pumping	364
10.16	Heavy Particle Pumping	366
	Worked Out Examples	367
	Tutorial Exercise	369
	References and Suggested Readings	369
11.	Laser Resonators	371
11.1	Basic Resonator	371
11.2	Fabri-perot or Plane-parallel Resonator	372
11.3	Spherical or Concentric Resonator	373
11.4	Confocal Resonator	374
11.5	Combination of Plane and Spherical REFL Reflectors	374
11.6	Stable and Unstable Resonator	375
11.7	Townes and Schawlow Approximation	375
11.8	Li and Fox Analysis	378
11.9	Cavity Losses and Parallelism 1384	
11.10	Boyd and Gordon Treatment for Confocal NA Resonator	385
11.11	Tem ₀₀ Mode	388
11.12	Tem ₀₁ Mode	388
11.13	Tem ₁₁ Mode	389
	Worked Out Examples	389
	Tutorial Exercise	395
	References and Suggested Reading	395
12.	Elements of Fibre Optics	397
12.1	Optical Fibre	397
12.2	Principles of Fibre Optics	397
12.3	Propagation of Light Within a Fibre	397
12.4	Index Profile of a Fibre	401
12.5	Integrated Optics	403
12.6	Advantages of Fibre-optics Over Conventional Systems	405
12.7	Input Light Acceptance	406

12.8	Modal Dispersion	407
12.9	Material Dispersion	407
12.10	Multi-mode Fibres	408
12.11	Use of Modulators and Detectors	409
	Worked Out Examples	410
	Tutorial Exercise	413
	References and Suggested Reading	413

Part B—Types 415

1. Introduction 417

1.1	Objective	417
1.2	Solid State Lasers	418
1.3	Ruby Laser	418
1.4	Neodymium Lasers	418
1.5	Nd-yag Laser	418
1.6	Nd-glass Laser	418
1.7	Alexandrite Laser	419
1.8	Fibre Glass Laser	419
1.9	Titanium Sapphire Laser	419
1.10	Colour Centre Lasers	419
1.11	Chromium Lisaf and Chromium Licaf Lasers	419
1.12	Other Solid State Lasers	419
1.13	Liquid Lasers	420
1.14	Gas Lasers	420
1.15	Chemical Lasers	421
1.16	X-ray Lasers	421
1.17	Free Electron Lasers	421
1.18	Semiconductor Lasers	421
1.19	Concluding Remarks	421

2. Solid State Lasers 422

2.1	Objective	422
2.2	Solid State Crystalline And Glass Lasers	422
2.3	Advantages of Solid Crystalline Lasers	424
2.4	Selection of Material	424
2.5	Ruby Laser	425
2.6	Construction of the Ruby Laser	426
2.7	Mechanism of Excitation of the Ruby Laser	427
2.8	Uses of Ruby Laser	428
2.9	Spiking In Ruby Laser	428
2.10	Calcium Fluoride—Uranium Laser	429
2.11	Neodymium Lasers	430

2.12	Characteristics of Nd-yag and Nd-glass Lasers (A Comparative Study)	430
2.13	Nd-yag Laser	432
2.14	Sensitised Nd-yag Laser	433
2.15	Nd-glass Laser	434
2.16	Applications of Neodymium Lasers	438
2.17	Alexandrite Laser	439
2.18	General Description of Alexandrite Laser	439
2.19	Geometry of Alexandrite Laser	440
2.20	Mechanism of Excitation In Alexandrite Laser	442
2.21	Applications of Alexandrite Laser	443
2.22	Fibre Glass Laser	443
2.23	Geometry of the Fibre Glass Laser	443
2.24	Energy Levels and Mechanism of Excitation In Optical Fibre Laser	444
2.25	Applications of Fibre Laser	445
2.26	Solid State Tunable Laser	446
2.27	Titanium Sapphire Laser	447
2.28	Laser Structure	447
2.29	Mechanism of Excitation	449
2.30	Applications of Titanium Sapphire Laser	450
2.31	Colour Centre Lasers	450
2.32	Geometry of Colour Centre Lasers	451
2.33	Mechanism of Excitation Of Colour RE Centre Lasers	452
2.34	Applications of Colour Centre Laser	453
2.35	Chromium Licaf and Chromium Lisaf Lasers	453
2.36	Geometry of Chromium Licaf And Lisaf Lasers	454
2.37	Mechanism of Excitation	455
2.38	Applications of Chromium Lisaf and Licaf Lasers	456
2.39	Stoichiometric Laser	456
2.40	Other Types of Solid State Lasers	456
	Worked Out Examples	457
	Tutorial Exercise	462
	References and Suggested Readings	462
3.	Liquid (Dye) Lasers	464
3.1	General Characteristics	464
3.2	Geometry of Dye Lasers	465
3.3	Pulsed Dye Lasers Pumped by Flash Lamps	465
3.4	Tunable Pulsed Lasers Pumped by Other Lasers	466
3.5	Tunable Continuous Wave Dye Lasers	467
3.6	Mode-locked Ring Dye Laser	468
3.7	Mechanism of Excitation of Mode-locked Dye Laser	468

3.8	Applications of Dye Laser	470
	Worked Out Examples	471
	Tutorial Exercise	473
	References and Suggested Readings	473
4.	Gas Lasers	475
4.1	Gas Discharge	475
4.2	Helium-neon Laser	476
4.3	Geometry of He-ne Laser	477
4.4	Energy Levels In He-ne Laser	478
4.5	Applications of He-ne Laser	481
4.6	Argon Ion Laser	482
4.7	Mechanism of Excitation In Argon-ion Laser	482
4.8	Construction of Argon Ion Laser	484
4.9	Krypton Ion Laser	486
4.10	Applications of Argon and Krypton Ion Lasers	487
4.11	Metal Vapour Lasers	488
4.12	Helium-cadmium Laser	488
4.13	Structure of He-cd Laser	489
4.14	Mechanism of Excitation Of-CHelium-cadmium Laser	489
4.15	Applications of Helium-cadmium Laser	490
4.16	Helium-selenium Laser	491
4.17	Mechanism Of Operation Of-SHelium-selenium Laser	491
4.18	Copper Vapour Laser (Cvl)	492
4.19	Geometry of Copper Vapour Laser	493
4.20	Mechanism of Excitation	493
4.21	Gold Vapour Laser	494
4.22	Lead Vapour Laser	495
4.23	Applications of Copper Vapour Laser & APGold Vapour Laser	495
4.24	Carbon Dioxide Laser	495
4.25	Geometry of Carbon Dioxide Laser	496
4.26	Wave-guide Lasers	496
4.27	Transversely Excited Laser At Atmospheric URPressure (Tea Laser)	497
4.28	Longitudinally Excited CO ₂ Laser	498
4.29	Gas Dynamic Laser	499
4.30	Applications Of CO ₂ Laser	500
4.31	Excimer Lasers	500
4.32	Structure of Excimer Lasers	502
4.33	Applications of Excimer Lasers	504
4.34	Nitrogen Laser	504
4.35	Configuration of N ₂ Laser	505

4.36	Applications of N ₂ Laser	506
4.37	Far-infrared Gas Lasers	506
4.38	Structure of Far-infrared Laser	507
4.39	Mechanism of Excitation of RA Far-infrared Lasers	507
4.40	Applications of Far-infrared Lasers	507
	Worked Out Examples	507
	Tutorial Exercise	514
	References and Suggested Reading	515
5.	Chemical, X-ray and Free Electron Lasers	516
5.1	Hydrogen Chloride Laser	517
5.2	Hydrogen Fluoride Laser	517
5.3	Deuterium Fluoride—Carbon Dioxide Laser	519
5.4	Applications of Chemical Lasers	521
5.5	X-ray Lasers	521
5.6	Applications of X-ray Lasers	523
5.7	Free Electron Lasers (Fel)	523
5.8	Structure of Free Electron Lasers	525
5.9	Applications of Fel	526
	Worked Out Examples	526
	Tutorial Exercise	527
	References and Suggested Reading	527
6.	Semiconductor Lasers	529
6.1	Introduction	529
6.2	Characteristics of Semiconductors Lasers	529
6.3	Semiconductor Diode Lasers	531
6.4	Heterojunction Semiconductor Materials	532
6.5	Double Heterostructure Laser	534
6.6	Structure of the Laser	536
6.7	Design with the Direction Normal To The Plane of the Junction	537
6.8	Homojunction Lasers	538
6.9	Heterojunction Lasers	538
6.10	Quantum-well Lasers	539
6.11	Design With the Lateral Direction Parallel To the Plane of the Junction	541
6.12	Structures with Gain Guidance	541
6.13	Index Guided Structures	542
6.14	High Power Semiconductor Diode Lasers	543
6.15	Single Mode Lasers	543
6.16	Multimode Lasers	544
6.17	Surface-emitting Lasers (Sels)	545

6.18	Applications of Semiconductor Lasers	547
	Worked Out Examples	547
	Tutorial Exercise	550
	References and Suggested Readings	551
7.	Laser Schemes—A Few More Options	553
7.1	Stoichiometric Laser	553
7.2	Spin-flip Raman Laser	553
7.3	Cyclotron Resonance Masers	555
7.4	Plasma Recombination Laser	556
	References and Suggested Readings	558
	Part C—Principles, Types and Applications	559
1.	Introduction	561
1.1	Scope of Laser Applications	561
	Worked Out Examples	561
2.	Industrial Applications of Lasers (Material Processing)	564
2.1	Industry	564
2.2	High Power Gas Lasers	565
2.3	Material Processing with Lasers	566
2.4	Metals and Lasers	567
2.5	Interactions	568
2.6	Material Processing Mechanism	570
2.7	Hole Drilling with Lasers	572
2.8	Cutting Process with Lasers	576
2.9	Laser Welding	578
2.10	The Welding Process	579
2.11	Micro Laser Welding	580
2.12	Deep Penetration Welding (High Power Laser Welding)	581
2.13	Laser Hardening	583
	Worked Out Examples	586
	Tutorial Exercise	588
	References and Suggested Readings	589
3.	Lasers In Industry and Science—Some More Applications	590
3.1	Fabrication of Electronic Components	590
3.2	Thin Films	591
3.3	Thick Films	591
3.4	Manufacture of Circuits	592
3.5	Micro Machining	594

3.6	Marking With Lasers	595
3.7	Wire Striping With Lasers	595
3.8	Lasers In Nuclear Science	596
3.9	Isotope Separation	596
3.10	Nuclear Fusion with Lasers	599
3.11	Laser-aided Fusion Reactor	601
3.12	Counting of Atoms with Lasers	604
3.13	Lasers In Spectroscopy	604
3.14	Lasers In Chemistry	607
3.15	Tracking of Bodies In Motion by Using Lasers	608
3.16	Light Detection and Ranging (Lidar)	609
3.17	Precision Measurement With Laser	611
3.18	Lasers For Inspection of Products	612
3.19	Scanning Laser Beam Devices	613
3.19	Optical Triangulation with Lasers	613
3.20	Measurement of Velocity	615
	Worked Out Examples	616
	Tutorial Exercise	619
	References and Suggested Readings	620
4.	Laser Communication	622
4.1	Introduction	622
4.2	Degradation of Signal In Optical Fibres	623
4.3	Optical Sources for Fibre Optical Communication	624
4.4	Powering and Coupling	625
4.5	Photo (or Photon) Detectors	629
4.6	Operation of Optical Receivers	631
4.7	Digital Transmission	632
4.8	Analogue Communication Systems	635
4.9	Coherent Communication	637
4.10	Essential Characteristics of Laser In Fibre Optic Communication	638
4.11	Emerging Trends and Techniques	640
	Worked Out Examples	643
	Tutorial Exercise	644
	References and Suggested Readings	644
5.	Holography and Its Applications	646
5.1	Basic Principles-a Relook	646
5.2	Types of Holograms	647
5.3	Intensity Distribution In a Hologram	648
5.4	In-line Holography	649
5.5	Far-field Fraunhofer Hologram	650

5.6	Off-axis Holography	651
5.7	Fourier Hologram	652
5.8	Thick Hologram	654
5.9	Reflection Holography	655
5.10	Multiplexed Holograms	657
5.11	Colour Holograms	658
5.12	Local Reference Beam (Lrb) Holograms	659
5.13	Composite Holograms	660
5.14	Computer Holograms	661
5.15	Applications of Holography	662
5.16	Holographic Microscopy	662
5.17	Particle Size Analysis	664
5.18	Pulsed Laser Photography	665
5.19	Holographic Data Storage and Retrieval	666
5.20	Holographic Memories	666
5.21	Television Tape Play Device	667
5.22	Acoustic Holography	668
5.23	Holographic Interferometry	670
5.24	Generation Of Contours	672
5.25	Quatum Holography	673
	Worked Out Examples	674
	Tutorial Exercise	677
	References and Suggested Readings	678
6.	Military Applications of Lasers	680
6.1	Laser Range Finders	680
6.2	Design of a Laser Range Finder	683
6.3	Tracking by Lasers	685
6.4	Target Designators	686
6.5	Beam Riding	686
6.6	Laser Simulators	688
6.7	Laser Radar	688
6.8	Laser Communication with Submarines	690
6.9	Technical Aspects of Slc (Submarine Laser Communication or Satellite Laser Communication)	691
6.10	Ocean Attenuation	691
6.11	Laser Gyro	693
6.12	Laser Against Cruise Missiles Coming a Towards a Ship	695
6.13	Sea-skimming Missiles	695
6.14	Merits of Laser Weapons	695
6.15	Types of Lasers for Anti-missile Role	696
6.16	Damage to the Target	696
6.17	Concluding Remarks	697
	Reference and Suggested Readings	698

7. Lasers in Medical Science	699
7.1 Medical Lasers	699
7.2 Laser Diagnostics	700
7.3 Photomedicine	702
7.4 Lasers In Ophthalmology	703
7.5 Photocoagulation	703
7.6 Treatment of Corneal Ulcers	704
7.7 Helping The Blind	704
7.8 Laser In-situ Keratomileusis (Lasik)	705
7.9 Laser In The Treatment of Glaucoma	706
7.10 Laser for General Surgery	707
7.11 Surgery with Free Electron Lasers (Fel)	708
7.12 Lasers In Dermatology	709
7.13 Cardiology	710
7.14 Lasers Against Viruses	710
7.15 Treatment For Infertility	710
7.16 Lasers In Dentistry	711
7.17 Lasers used In Medicine	711
Worked Out Examples	712
Tutorial Exercise	714
References and Suggested Readings	714
8. Laser Hazards and Laser Safety	716
8.1 Laser Hazards	716
8.2 Classification of Laser Hazards	716
8.3 Laser Safety	717
References and Suggested Readings	718
9. Some Newcomers	719
9.1 Optical Computing	719
9.2 Optical Connection between Integrated Circuits	722
9.3 Star Wars	723
References and Suggested Reading	726
10. Miscellaneous Notes	727
10.1 Line Shape Function	727
10.2 Nonlinear Effects and Harmonic Generation	728
10.3 Phase Matching	730
10.4 Bistable Elements	730
10.5 Two-photon Absorption	732
References and Suggested Readings	733
Conversion Tables	734
Physical Constants and their Values	737
Glossary	738
