PART I Fundamentals of Engineering Economy

CHAPTER 1 **Introduction to Engineering Economy** **1**

1.1	Introduction	2
1.2	The Principles of Engineering Economy	3
1.3	Engineering Economy and the Design Process	6
1.4	Using Spreadsheets in Engineering Economic Analysis	15
1.5	Summary	15

CHAPTER 2 **Cost Concepts and Design Economics** **19**

2.1	Cost Terminology	20
2.2	The General Economic Environment	27
2.3	Cost-Driven Design Optimization	37
2.4	Present Economy Studies	42
2.5	Case Study—The Economics of Daytime Running Lights	51
2.6	Summary	53
	Appendix 2-A Accounting Fundamentals	62

CHAPTER 3 **Cost-Estimation Techniques** **71**

3.1	Introduction	72
3.2	An Integrated Approach	74
3.3	Selected Estimating Techniques (Models)	82
3.4	Parametric Cost Estimating	87
3.5	Cost Estimation in the Design Process	98
3.6	Case Study—Demanufacturing of Computers	106
3.7	Summary	108

CHAPTER 4		
The Time Value of Money		114
4.1	Introduction	115
4.2	Simple Interest	116
4.3	Compound Interest	117
4.4	The Concept of Equivalence	117
4.5	Notation and Cash-Flow Diagrams and Tables	120
4.6	Relating Present and Future Equivalent Values of Single Cash Flows	124
4.7	Relating a Uniform Series (Annuity) to Its Present and Future Equivalent Values	130
4.8	Summary of Interest Formulas and Relationships for Discrete Compounding	141
4.9	Deferred Annuities (Uniform Series)	142
4.10	Equivalence Calculations Involving Multiple Interest Formulas	144
4.11	Uniform (Arithmetic) Gradient of Cash Flows	150
4.12	Geometric Sequences of Cash Flows	156
4.13	Interest Rates that Vary with Time	161
4.14	Nominal and Effective Interest Rates	163
4.15	Compounding More Often than Once per Year	165
4.16	Interest Formulas for Continuous Compounding and Discrete Cash Flows	168
4.17	Case Study—Understanding Economic “Equivalence”	171
4.18	Summary	174

PART II Engineering Economy in Action

CHAPTER 5		
Evaluating a Single Project		190
5.1	Introduction	191
5.2	Determining the Minimum Attractive Rate of Return (MARR)	192
5.3	The Present Worth Method	192
5.4	The Future Worth Method	201
5.5	The Annual Worth Method	202
5.6	The Internal Rate of Return Method	206
5.7	The External Rate of Return Method	217
5.8	The Payback (Payout) Period Method	220
5.9	Case Study—A Proposed Capital Investment to Improve Process Yield	222
5.10	Summary	223
Appendix 5-A	The Multiple Rate of Return Problem with the IRR Method	234

CHAPTER 6		
Comparison and Selection among Alternatives		238
6.1	Introduction	239
6.2	Basic Concepts for Comparing Alternatives	239
6.3	The Study (Analysis) Period	243
6.4	Useful Lives Are Equal to the Study Period	245
6.5	Useful Lives Are Unequal among the Alternatives	264
6.6	Personal Finances	276
6.7	Case Study—Ned and Larry's Ice Cream Company	280
6.8	Postevaluation of Results	283
6.9	Summary	283
CHAPTER 7		
Depreciation and Income Taxes		300
7.1	Introduction	301
7.2	Depreciation Concepts and Terminology	301
7.3	The Classical (Historical) Depreciation Methods	304
7.4	The Modified Accelerated Cost Recovery System	309
7.5	A Comprehensive Depreciation Example	316
7.6	Introduction to Income Taxes	320
7.7	The Effective (Marginal) Corporate Income Tax Rate	323
7.8	Gain (Loss) on the Disposal of an Asset	326
7.9	General Procedure for Making After-Tax Economic Analyses	327
7.10	Illustration of Computations of ATCFs	331
7.11	Economic Value Added	343
7.12	Summary	345
CHAPTER 8		
Price Changes and Exchange Rates		356
8.1	Introduction	357
8.2	Terminology and Basic Concepts	358
8.3	Fixed and Responsive Annuities	364
8.4	Spreadsheet Application	369
8.5	Foreign Exchange Rates and Purchasing Power Concepts	371
8.6	Case Study—Selecting Electric Motors to Power an Assembly Line	376
8.7	Summary	379
CHAPTER 9		
Replacement Analysis		389
9.1	Introduction	390
9.2	Reasons for Replacement Analysis	390

9.3	Factors that Must Be Considered in Replacement Studies	391
9.4	Typical Replacement Problems	394
9.5	Determining the Economic Life of a New Asset (Challenger)	397
9.6	Determining the Economic Life of a Defender	401
9.7	Comparisons in which the Defender's Useful Life Differs from that of the Challenger	404
9.8	Retirement without Replacement (Abandonment)	407
9.9	After-Tax Replacement Studies	408
9.10	Case Study—Replacement of a Hospital's Emergency Electrical Supply System	418
9.11	Summary	421

PART III Additional Topics in Engineering Economy

CHAPTER 10

Evaluating Projects with the Benefit–Cost Ratio Method 431

10.1	Introduction	432
10.2	Perspective and Terminology for Analyzing Public Projects	433
10.3	Self-Liquidating Projects	434
10.4	Multiple-Purpose Projects	434
10.5	Difficulties in Evaluating Public-Sector Projects	437
10.6	What Interest Rate Should Be Used for Public Projects?	438
10.7	The Benefit–Cost Ratio Method	440
10.8	Evaluating Independent Projects by B–C Ratios	446
10.9	Comparison of Mutually Exclusive Projects by B–C Ratios	448
10.10	Criticisms and Shortcomings of the Benefit–Cost Ratio Method	453
10.11	Case Study—Improving a Railroad Crossing	455
10.12	Summary	457

CHAPTER 11

Breakeven and Sensitivity Analysis 465

11.1	Introduction	466
11.2	Breakeven Analysis	466
11.3	Sensitivity Analysis	473
11.4	Multiple Factor Sensitivity Analysis	479
11.5	Case Study—Analysis of a Business Venture	483
11.6	Summary	486

CHAPTER 12		
Probabilistic Risk Analysis		495
12.1	Introduction	496
12.2	Sources of Uncertainty	497
12.3	The Distribution of Random Variables	497
12.4	Evaluation of Projects with Discrete Random Variables	501
12.5	Evaluation of Projects with Continuous Random Variables	510
12.6	Evaluation of Uncertainty by Monte Carlo Simulation	515
12.7	Performing Monte Carlo Simulation with a Computer	519
12.8	Decision Trees	523
12.9	Real Options Analysis	532
12.10	Case Study—The Oils Well That Ends Well Company	535
12.11	Summary	539
CHAPTER 13		
The Capital Budgeting Process		548
13.1	Introduction	549
13.2	Debt Capital	551
13.3	Equity Capital	552
13.4	The Weighted Average Cost of Capital (WACC)	555
13.5	Project Selection	559
13.6	Postmortem Review	563
13.7	Budgeting of Capital Investments and Management Perspective	564
13.8	Leasing Decisions	565
13.9	Capital Allocation	567
13.10	Case Study—Financing an Automobile	575
13.11	Summary	578
CHAPTER 14		
Decision Making Considering Multiattributes		581
14.1	Introduction	582
14.2	Examples of Multiattribute Decisions	582
14.3	Choice of Attributes	584
14.4	Selection of a Measurement Scale	584
14.5	Dimensionality of the Problem	585
14.6	Noncompensatory Models	585
14.7	Compensatory Models	590
14.8	Summary	598

PART IV Appendices

A	Using Excel to Solve Engineering Economy Problems	604
B	Abbreviations and Notation	621
C	Interest and Annuity Tables for Discrete Compounding	625
D	Interest and Annuity Tables for Continuous Compounding	644
E	Standard Normal Distribution	648
F	Selected References	651
G	Answers to Selected Problems	654
	Index	659
