Preface	xvii	
Acknowledgements	xix	
Chapter 1	Review of algebraic techniques	1
1.1	Introduction	1
1.2	Laws of indices	1
1.3	Number bases	11
1.4	Polynomial equations	20
1.5	Algebraic fractions	26
1.6	Solution of inequalities	33
1.7	Partial fractions	38
1.8	Summation notation	45
	Review exercises 1	49
Chapter 2	Engineering functions	52
2.1	Introduction	52
2.2	Numbers and intervals	53
2.3	Basic concepts of functions	54
2.4	Review of some common engineering functions and techniques	66
	Review exercises 2	106
Chapter 3	The trigonometric functions	109
3.1	Introduction	109
3.2	Degrees and radians	110
3.3	The trigonometric ratios	110
3.4	The sine, cosine and tangent functions	114
3.5	The sinc x function	117
3.6	Trigonometric identities	119
3.7	Modelling waves using $\sin t$ and $\cos t$	125
3.8	Trigonometric equations	137
	Review exercises 3	144

Chapter 4	Coordinate systems	147
4.1	Introduction	147
4.2	Cartesian coordinate system – two dimensions	147
4.3	Cartesian coordinate system – three dimensions	150
4.4	Polar coordinates	151
4.5	Some simple polar curves	155
4.6	Cylindrical polar coordinates	158
4.7	Spherical polar coordinates	162
	Review exercises 4	165
Chapter 5	Discrete mathematics	166
5.1	Introduction	166
5.2	Set theory	166
5.3	Logic	174
5.4	Boolean algebra	176
	Review exercises 5	187
Chapter 6	Sequences and series	190
6.1	Introduction	190
6.2	Sequences	191
6.3	Series	199
6.4	The binomial theorem	204
6.5	Power series	208
6.6	Sequences arising from the iterative solution of non-linear equations	209
	Review exercises 6	212
Chapter 7	Vectors	214
7.1	Introduction	214
7.2	Vectors and scalars: basic concepts	214
7.3	Cartesian components	222
7.4	Scalar fields and vector fields	229
7.5	The scalar product	230
7.6	The vector product	235
7.7	Vectors of n dimensions	241
	Review exercises 7	242
Chapter 8	Matrix algebra	245
8.1	Introduction	245
8.2	Basic definitions	246

8.3	Addition, subtraction and multiplication	247
8.4	Robot coordinate frames	254
8.5	Some special matrices	257
8.6	The inverse of a 2×2 matrix	260
8.7	Determinants	264
8.8	The inverse of a 3×3 matrix	268
8.9	Application to the solution of simultaneous equations	269
8.10	Gaussian elimination	272
8.11	Eigenvalues and eigenvectors	280
8.12	Analysis of electrical networks	292
8.13	Iterative techniques for the solution of simultaneous equations	298
8.14	Computer solutions of matrix problems	304
	Review exercises 8	306

Chapter 9

Complex numbers 309

9.1	Introduction	309
9.2	Complex numbers	310
9.3	Operations with complex numbers	313
9.4	Graphical representation of complex numbers	317
9.5	Polar form of a complex number	318
9.6	Vectors and complex numbers	321
9.7	The exponential form of a complex number	322
9.8	Phasors	325
9.9	De Moivre's theorem	329
9.10	Loci and regions of the complex plane	335
	Review exercises 9	339

Chapter 10

Differentiation 340

10.1	Introduction	340
10.2	Graphical approach to differentiation	341
10.3	Limits and continuity	342
10.4	Rate of change at a specific point	346
10.5	Rate of change at a general point	348
10.6	Existence of derivatives	354
10.7	Common derivatives	356
10.8	Differentiation as a linear operator	359
	Review exercises 10	366

Chapter 11

Techniques of differentiation 368

11.1	Introduction	368
------	--------------	-----

11.2	Rules of differentiation	368
11.3	Parametric, implicit and logarithmic differentiation	375
11.4	Higher derivatives	382
	Review exercises 11	386

Chapter 12 Applications of differentiation 388

12.1	Introduction	388
12.2	Maximum points and minimum points	388
12.3	Points of inflexion	397
12.4	The Newton–Raphson method for solving equations	400
12.5	Differentiation of vectors	405
	Review exercises 12	408

Chapter 13 Integration 410

13.1	Introduction	410
13.2	Elementary integration	411
13.3	Definite and indefinite integrals	424
	Review exercises 13	434

Chapter 14 Techniques of integration 438

14.1	Introduction	438
14.2	Integration by parts	438
14.3	Integration by substitution	444
14.4	Integration using partial fractions	447
	Review exercises 14	449

Chapter 15 Applications of integration 452

15.1	Introduction	452
15.2	Average value of a function	452
15.3	Root mean square value of a function	456
	Review exercises 15	459

Chapter 16 Further topics in integration 461

16.1	Introduction	461
16.2	Orthogonal functions	461
16.3	Improper integrals	464
16.4	Integral properties of the delta function	469
16.5	Integration of piecewise continuous functions	472
16.6	Integration of vectors	473
	Review exercises 16	474

Chapter 17	Numerical integration	477
	17.1 Introduction	477
	17.2 Trapezium rule	477
	17.3 Simpson's rule	481
	Review exercises 17	486
Chapter 18	Taylor polynomials, Taylor series and Maclaurin series	488
	18.1 Introduction	488
	18.2 Linearization using first-order Taylor polynomials	489
	18.3 Second-order Taylor polynomials	493
	18.4 Taylor polynomials of the n th order	497
	18.5 Taylor's formula and the remainder term	501
	18.6 Taylor and Maclaurin series	504
	Review exercises 18	512
Chapter 19	Ordinary differential equations I	514
	19.1 Introduction	514
	19.2 Basic definitions	515
	19.3 First-order equations: simple equations and separation of variables	520
	19.4 First-order linear equations: use of an integrating factor	527
	19.5 Second-order linear equations	537
	Review exercises 19	564
Chapter 20	Ordinary differential equations II	566
	20.1 Introduction	566
	20.2 Analogue simulation	566
	20.3 Higher order equations	569
	20.4 State-space models	572
	20.5 Numerical methods	578
	20.6 Euler's method	578
	20.7 Improved Euler method	582
	20.8 Runge–Kutta method of order 4	585
	Review exercises 20	589
Chapter 21	The Laplace transform	590
	21.1 Introduction	590
	21.2 Definition of the Laplace transform	591
	21.3 Laplace transforms of some common functions	592
	21.4 Properties of the Laplace transform	594

21.5	Laplace transform of derivatives and integrals	598
21.6	Inverse Laplace transforms	601
21.7	Using partial fractions to find the inverse Laplace transform	604
21.8	Finding the inverse Laplace transform using complex numbers	606
21.9	The convolution theorem	610
21.10	Solving linear constant coefficient differential equations using the Laplace transform	612
21.11	Transfer functions	622
21.12	Poles, zeros and the s plane	630
21.13	Laplace transforms of some special functions	638
	Review exercises 21	641
Chapter 22	Difference equations and the z transform	644
22.1	Introduction	644
22.2	Basic definitions	645
22.3	Rewriting difference equations	649
22.4	Block diagram representation of difference equations	651
22.5	Design of a discrete-time controller	655
22.6	Numerical solution of difference equations	657
22.7	Definition of the z transform	660
22.8	Sampling a continuous signal	664
22.9	The relationship between the z transform and the Laplace transform	666
22.10	Properties of the z transform	671
22.11	Inversion of z transforms	677
22.12	The z transform and difference equations	681
	Review exercises 22	683
Chapter 23	Fourier series	684
23.1	Introduction	684
23.2	Periodic waveforms	685
23.3	Odd and even functions	688
23.4	Orthogonality relations and other useful identities	694
23.5	Fourier series	695
23.6	Half-range series	707
23.7	Parseval's theorem	710
23.8	Complex notation	711
23.9	Frequency response of a linear system	713
	Review exercises 23	717

Chapter 24	The Fourier transform	719
	24.1 Introduction	719
	24.2 The Fourier transform – definitions	720
	24.3 Some properties of the Fourier transform	723
	24.4 Spectra	728
	24.5 The t – ω duality principle	730
	24.6 Fourier transforms of some special functions	732
	24.7 The relationship between the Fourier transform and the Laplace transform	734
	24.8 Convolution and correlation	736
	24.9 The discrete Fourier transform	745
	24.10 Derivation of the d.f.t.	749
	24.11 Using the d.f.t. to estimate a Fourier transform	752
	24.12 Matrix representation of the d.f.t.	754
	24.13 Some properties of the d.f.t.	755
	24.14 The discrete cosine transform	757
	24.15 Discrete convolution and correlation	763
	Review exercises 24	783
Chapter 25	Functions of several variables	785
	25.1 Introduction	785
	25.2 Functions of more than one variable	785
	25.3 Partial derivatives	787
	25.4 Higher order derivatives	791
	25.5 Partial differential equations	794
	25.6 Taylor polynomials and Taylor series in two variables	797
	25.7 Maximum and minimum points of a function of two variables	803
	Review exercises 25	808
Chapter 26	Vector calculus	811
	26.1 Introduction	811
	26.2 Partial differentiation of vectors	811
	26.3 The gradient of a scalar field	813
	26.4 The divergence of a vector field	817
	26.5 The curl of a vector field	821
	26.6 Combining the operators grad, div and curl	823
	26.7 Vector calculus and electromagnetism	825
	Review exercises 26	826

Chapter 27	Line integrals and multiple integrals	829
	27.1 Introduction	829
	27.2 Line integrals	830
	27.3 Evaluation of line integrals in two dimensions	833
	27.4 Evaluation of line integrals in three dimensions	835
	27.5 Conservative fields and potential functions	837
	27.6 Double and triple integrals	842
	27.7 Some simple volume and surface integrals	851
	27.8 The divergence theorem and Stokes' theorem	856
	27.9 Maxwell's equations in integral form	861
	Review exercises 27	862
Chapter 28	Probability	864
	28.1 Introduction	864
	28.2 Introducing probability	865
	28.3 Mutually exclusive events: the addition law of probability	870
	28.4 Complementary events	874
	28.5 Concepts from communication theory	875
	28.6 Conditional probability: the multiplication law	879
	28.7 Independent events	884
	Review exercises 28	889
Chapter 29	Statistics and probability distributions	891
	29.1 Introduction	891
	29.2 Random variables	892
	29.3 Probability distributions – discrete variable	893
	29.4 Probability density functions – continuous variable	894
	29.5 Mean value	896
	29.6 Standard deviation	899
	29.7 Expected value of a random variable	901
	29.8 Standard deviation of a random variable	904
	29.9 Permutations and combinations	906
	29.10 The binomial distribution	911
	29.11 The Poisson distribution	915
	29.12 The uniform distribution	918
	29.13 The exponential distribution	919
	29.14 The normal distribution	921
	29.15 Reliability engineering	927
	Review exercises 29	934

Appendix I	Representing a continuous function and a sequence as a sum of weighted impulses	937
Appendix II	The Greek alphabet	939
Appendix III	SI units and prefixes	940
Appendix IV	The binomial expansion of $\left(\frac{n-N}{n}\right)^n$	940
	Index	941
