

Contents

1. Basic Concepts and Definitions 1–28

1.1	Thermodynamics: what is it?	1
1.2	Macroscopic and microscopic approach : classical and statistical thermodynamics	2
1.3	Thermodynamic system, surroundings and boundary	4
1.4	Thermodynamic property : intensive and extensive properties	7
1.5	Equilibrium: mechanical, chemical, thermal and thermodynamic	8
1.6	State, path, process and cycle	9
1.7	Quasi-static or quasi-equilibrium process	10
1.8	Reversible and irreversible processes	11
1.9	Working substance	13
1.10	Units and dimensions	13
1.11	Specific weight, mass density and specific volume	15
1.12	Work, energy and power	16
1.13	Pressure	19
1.14	Atmospheric pressure and temperature	21
	Salient points	24
	Review questions	25

2. Temperature and Zeroth Law of Thermodynamics 29–42

2.1	Equality of temperature	29
2.2	Zeroth law of thermodynamics	29
2.3	Thermometry	30
2.4	Temperature scales	31
2.4.1	Centigrade and Fahrenheit scales	31
2.4.2	Kelvin and Rankine absolute scales	31
2.4.3	Thermodynamic scale	31
2.4.4	Perfect gas thermometer	32
2.4.5	International temperature scale	34
	Salient points	40
	Review questions	41

3. Transient Energies: Work and Heat 43–60

3.1	Work as defined in mechanics	43
3.2	Work as defined in thermodynamics	43
3.3	Displacement work : $p dV$	44
3.4	Cases of $W \neq \int p dV$	54
3.4.1	Unrestrained (or free) expansion	54
3.4.2	Paddle work : $dv = 0$ yet $W \neq 0$	54

3.5	Heat	54
3.6	Specific heat and heat capacity	56
	Salient points	58
	Review questions	59

4. Ideal and Real Gases 61–82

4.1	Concept of an ideal gas	61
4.2	Basic gas laws	61
4.2.1	Boyle's law	61
4.2.2	Charles' law	62
4.3	Characteristic gas equation (equation of state of an ideal gas)	64
4.4	Avogadro's law and universal gas constant	66
4.5	van der Waal's equation of state	70
4.5.1	Determination of constant a and b	71
4.6	Reduced parameters	73
4.7	Reduced equation of state	73
4.8	Law of corresponding states	73
4.9	Compressibility factor	74
4.10	Other equations of state for real gases	76
	Salient points	79
	Review questions	80

5. Mixture of Gases 83–102

5.1	Mole fraction and mass fraction	83
5.2	Partial pressure and Dalton's law	84
5.3	Amagat-Leduc law of partial volumes	85
5.4	Relation between partial pressure, mole fraction and volume fraction	85
5.5	Gas constant, molecular mass and specific heats of the gas mixture	86
5.6	Relation between volumetric and gravimetric analysis	87
	Salient points	101
	Review questions	101

6. First Law of Thermodynamics 103–152

6.1	Joule's paddle-wheel experiment	103
6.2	Energy conversions	103
6.3	First law of thermodynamics	104
6.3.1	First law for a cyclic process	105
6.3.2	Corollaries of first law	106
6.4	Stored energy – a property of the system	107
6.5	Non-flow processes (first law and closed systems)	115
6.5.1	Constant volume or isochoric process	115
6.5.2	Constant pressure or isobaric process	117

6.5.3	Isothermal (constant temperature) process	124
6.5.4	Adiabatic process	127
6.5.5	Polytropic process	129
6.6	Joule's law	143
6.7	Free expansion	144
	<i>Salient points</i>	145
	<i>Review questions</i>	146

7. Steady Flow Energy Equation (Flow Process and 1st Law) 153–178

7.1	Flow rate and continuity equation	153
7.2	Flow process and control volume	153
7.3	Flow work or flow energy	154
7.4	Steady and unsteady flow process	154
7.5	Steady flow energy equation (SFEE)	155
7.6	Engineering applications of steady flow energy equation	156
7.6.1	Nozzle and diffuser	157
7.6.2	Boiler	157
7.6.3	Steam or gas turbine	158
7.6.4	Rotary compressor	158
7.6.5	Reciprocating compressor	159
7.6.6	Centrifugal water pump	159
7.6.7	Hydraulic turbine	159
7.6.8	Heat exchanger (condenser)	160
7.6.9	Evaporator	160
7.7	Throttling process	169
7.8	Flow work and non-flow work	170
7.9	Flow work processes	171
7.9.1	Isochoric (constant volume) process: $v = \text{const}$	171
7.9.2	Isobaric (constant pressure) process: $p = \text{const}$	171
7.9.3	Isothermal (constant temperature) process: $pv = \text{const}$	171
7.9.4	Polytropic process: $pv^n = \text{const}$	172
7.10	Unsteady flow processes	172
7.10.1	Tank filling process	172
7.10.2	Tank emptying process	173
	<i>Salient points</i>	176
	<i>Review questions</i>	177

8. Second Law of Thermodynamics 179–223

8.1	Limitations of first law	179
8.2	Thermal reservoir	180
8.3	Heat engine, refrigerator and heat pump	180
8.3.1	Kelvin-Planck statement	183
8.3.2	Clausius statement	184
8.4	Equivalence of Kelvin-Planck and Clausius statements	184
8.4.1	Violation of Clausius statement leading to violation of Kelvin-Planck statement	184

8.4.2	Violation of Kelvin-Planck statement leading to violation of Clausius statement	185
-------	---	-----

8.5	Perpetual motion machine of second kind	185
8.6	Reversible and irreversible processes	186
8.7	Carnot cycle and Carnot heat engine	186
8.8	Reversed heat engine (Carnot heat pump)	188
8.9	Carnot theorem	195
8.10	Thermodynamic temperature scale	198
8.11	Clausius inequality	200
	<i>Salient points</i>	218
	<i>Review questions</i>	219

9. Entropy 224–258

9.1	What is entropy	224
9.2	Entropy is a point function	224
9.3	Entropy change in an irreversible process	225
9.4	Entropy principle	225
9.5	Temperature-entropy plot	226
9.6	Entropy change during a process	236
9.6.1	Constant volume process	236
9.6.2	Constant pressure process	237
9.6.3	Isothermal process	237
9.6.4	Reversible adiabatic (isentropic) process	237
9.6.5	Polytropic process	238
9.7	Entropy change with variable specific heat	252
	<i>Salient points</i>	255
	<i>Review questions</i>	255

10. Availability and Irreversibility 259–278

10.1	High and low grade energy	259
10.2	Available and unavailable energy	259
10.3	Loss of available energy due to heat transfer through a finite temperature difference	262
10.4	Availability of a non-flow or closed system	268
10.5	Availability of a steady flow system	270
10.6	Helmholtz and Gibb's functions	273
10.7	Effectiveness and irreversibility	273
10.8	Third law of thermodynamics (Nernst law)	275
	<i>Salient points</i>	276
	<i>Review questions</i>	276

11. Thermodynamic Relations 279–301

11.1	Reciprocal and cyclic relations	279
11.2	Property relations	280
11.3	Check for a property	280
11.4	Maxwell relations	281
11.5	$T-ds$ equations	282
11.6	Heat capacity relations	283
11.7	Relations for internal energy and enthalpy	287
	<i>Review questions</i>	301

12. Gas Power Cycles 302–359

12.1	Heat engine	302
12.2	Air standard efficiency	303
12.3	Piston-cylinder arrangement	303
12.4	Carnot cycle	305
12.5	Otto (constant volume) cycle	309
12.6	Diesel (constant pressure) cycle	320
12.7	Dual combustion (mixed or composite) cycle	333
12.8	Comparison of otto and diesel cycles	343
12.9	Atkinson cycle	345
12.10	Stirling and Ericsson cycles	348
12.11	Brayton or Joule cycle	353
12.12	Lenoir cycle	353
	<i>Salient points</i>	355
	<i>Review questions</i>	355

13. Steam and its Properties .. 360–412

13.1	Pure substance and phase	360
13.2	Vaporisation, evaporation and boiling	361
13.3	Saturated and superheated steam	361
13.4	Steam generation	362
13.5	Solid – liquid – vapour equilibrium	364
13.6	Enthalpy changes during formation of steam	365
13.7	Volume of dry, wet and superheated steam	366
13.8	External work and internal latent heat	367
13.9	Internal energy of steam	367
13.10	Entropy of steam	367
13.11	Steam tables	368
13.12	Temperature-entropy ($T-s$) and enthalpy-entropy ($H-s$) diagrams	396
13.13	Throttling and measurement of dryness fraction	403
13.14	Bucket or barrel calorimeter	407
	<i>Salient points</i>	408
	<i>Review questions</i>	410

14. Steam Boilers, Mountings and Accessories 413–445

14.1	Classification of boilers	413
14.2	Fire tube boilers	415
14.3	Water tube boilers	421
14.4	Comparison between water tube and fire tube boiler	424
14.5	Guidelines for the choice of a new boiler ..	425
14.6	Essentials of a good boiler	425
14.7	Boiler mountings and accessories	426
14.8	High pressure boilers	439
	14.8.1 Lamont boiler	440
	14.8.2 Loeffler boiler	441
	14.8.3 Benson boiler	442
	<i>Salient points</i>	443
	<i>Review questions</i>	444

15. Boiler Draught and Boiler Performance 446–468

15.1	Draught: its necessity and classification	446
15.2	Natural (chimney) draught	447
	15.2.1 Height of chimney	447
	15.2.2 Condition for maximum discharge	449
	15.2.3 Chimney efficiency	450
	15.2.4 Advantages / disadvantages of chimney draught	450
15.3	Artificial draught	450
	15.3.1 Fan draught	451
	15.3.2 Steamjet draught	452
	15.3.3 Comparison between artificial and natural draughts	452
15.4	Boiler performance	458
15.5	Boiler trial and heat balance	462
	<i>Salient points</i>	465
	<i>Review questions</i>	466

16. Vapour Power Cycles 469–501

16.1	Carnot cycle	470
16.2	Rankine cycle	472
	16.2.1 Comparison of Rankine cycle with Carnot cycle	474
	16.2.2 Rankine cycle using steam with and without superheat	475
	16.2.3 Effect of internal irreversibilities on cycle efficiency	476
	16.2.4 Working fluid for a Rankine cycle ..	477
16.3	Modified Rankine cycle	477
16.4	Thermal refinement of Rankine cycle	480
16.5	Reheat cycle	487
16.6	Regenerative heating	489
16.7	Binary vapour cycle	495
16.8	Cogeneration : combined heat and power ..	497
	<i>Salient points</i>	498
	<i>Review questions</i>	499

17. Steam Engines 502–547

17.1	Classification	502
17.2	Constructional details	503
17.3	Steam engine terminology	505
17.4	Hypothetical indicator diagram	506
17.5	Mass of steam in the cylinder	510
17.6	Saturation curve and missing quantity	511
17.7	Cylinder condensation and its prevention ..	514
17.8	Performance of steam engines	515
17.9	Governing of steam engines	524
17.10	Compound steam engines	526
17.11	Calculations for cylinder dimensions	529
17.12	Governing of compound steam engines	541
	<i>Salient points</i>	543
	<i>Review questions</i>	544

18. Flow through Nozzles 548–582

18.1	Equation of state	548
18.2	Wave propagation and sound velocity	549
18.3	Basic equations for one-dimensional compressible flow	551
18.4	Isentropic flow relations	553
18.5	Variation of velocity with area ratio	555
18.6	Discharge through a convergent nozzle	558
18.7	Velocity and heat drop	564
18.8	Flow of vapours	564
18.9	Effect of friction and nozzle efficiency	565
18.10	Supersaturated flow and its effects	572
18.11	Nozzles off the design pressure ratio	577
	<i>Salient points</i>	578
	<i>Review questions</i>	579

19. Steam Turbines 583–621

19.1	Impulse and reaction principle	583
19.2	Flow through nozzles	584
19.3	Simple impulse turbine	586
19.4	Efficiency of impulse turbine blading	588
19.5	Steam turbine staging	594
	19.5.1 Two state velocity compounding	598
19.6	Reaction turbine	603
19.7	Degree of reaction	604
19.8	Efficiency of reaction turbine blading	605
19.9	Impulse turbines versus reaction turbines	609
19.10	Losses in steam turbines	610
19.11	Stage efficiency, overall efficiency and reheat factor	611
19.12	Steam turbine governing	617
	<i>Salient points</i>	618
	<i>Review questions</i>	619

20. Steam Condensers 622–645

20.1	Condenser and its utility	622
20.2	Elements of a condensing plant	623
20.3	Types of condensers	624
20.4	Comparison of jet and surface condensers	627
20.5	Evaporative condenser	628
20.6	Condenser vacuum	628
20.7	Loss of vacuum and air leakage	629
20.8	Vacuum efficiency	630
20.9	Condenser efficiency	630
20.10	Dalton's law and air-vapour mixture	630
20.11	Edward air pump	640
20.12	Cooling towers and cooling ponds	641
	<i>Salient points</i>	642
	<i>Review questions</i>	643

21. Compressed Air: Positive Displacement and Dynamic Compressors 646–701

21.1	Utility of compressed air	646
------	---------------------------------	-----

21.2	Classification of compressors	647
21.3	Single acting reciprocating of compressor	648
21.4	Power required to drive the compressor	648
21.5	Effect of clearance and volumetric efficiency	651
21.6	Multistage compression	662
21.7	Rotary compressors (positive displacement type)	671
21.8	Dynamic compressors	674
21.9	Centrifugal compressor	676
	21.9.1 Velocity vector diagrams for centrifugal compressor	676
	21.9.2 Vane shape and head capacity relationship	678
	21.9.3 Slip and slip factor	679
	21.9.4 Static and total head values	680
	21.9.5 Compression pressure ratio	682
	21.9.6 Pressure coefficient	683
21.10	Axial flow compressor	687
21.11	Surging, choking and stalling	692
21.12	Performance characteristics of rotary compressors	694
21.13	Centrifugal compressor versus axial flow compressor	695
	<i>Salient points</i>	696
	<i>Review questions</i>	698

22. Internal Combustion Engines 702–760

22.1	Heat engines	702
22.2	Classification of IC engines	702
22.3	Engine parts and their functions	704
22.4	Four stroke petrol engine	706
22.5	Four stroke diesel engine	709
22.6	Valve timing diagram	711
22.7	Comparison between petrol and diesel engines	713
22.8	Two stroke system	714
22.9	Comparison between two-stroke and four-stroke engines	716
22.10	Carburation and carburettor	717
22.11	Fuel Injection in compression ignition engines	719
22.12	Ignition system for petrol engine	721
22.13	Governing (speed control) system	723
22.14	Supercharging	724
22.15	Combustion in spark ignition engines	725
22.16	Combustion in compression ignition engines	730
22.17	Cooling system	734
22.18	Lubrication system	736
22.19	Performance analysis of IC engine	736
22.20	Measurement of indicated power and brake power	738

22.21	Performance parameters	740
22.22	Morse test	741
22.23	Heat balance sheet	742
22.24	Performance characteristics	748
	<i>Salient points</i>	752
	<i>Review questions</i>	755

23. Gas Turbines and Jet Propulsion 761–809

23.1	System of operation	762
23.2	Brayton or Joule cycle	765
23.3	Thermal refinement of a gas turbine cycle	776
	23.3.1 Regeneration	776
	23.3.2 Intercooling	778
	23.3.3 Reheating	780
23.4	Closed and semi-closed gas turbine cycles	788
23.5	Gas turbines versus reciprocating IC engines	789
23.6	Gas turbines versus steam turbines	790
23.7	Jet propulsion	791
	23.7.1 Turbojet	792
	23.7.2 Turbo-prop	793
	23.7.3 Ramjet (Athodyd)	794
	23.7.4 Pulse jet (Flying bomb)	795
23.8	Rocket engines	796
23.9	Thrust and propulsive efficiency	797
	<i>Salient points</i>	804
	<i>Review questions</i>	806

24. Fuels and Combustion 810–839

24.1	Characteristics of an ideal fuel	810
24.2	Classification of fuels	811
	24.2.1 Solid fuels	811
	24.2.2 Liquid fuels	812
	24.2.3 Gaseous fuels	812
24.3	Combustion reaction and combustion analysis	813
24.4	Calorific value of fuels	815
	24.4.1 Bomb calorimeter	816
	24.4.2 Junker's gas calorimeter	818
24.5	Analysis of combustion products	820
24.6	Chemical thermodynamics	832
	24.6.1 Stoichiometric coefficients	832
	24.6.2 Standard reference state	832
	24.6.3 Formation reaction	833
	24.6.4 Internal energy	833
	24.6.5 Standard enthalpy change	834
	24.6.6 Enthalpy of formation	835
	24.6.7 Adiabatic flame temperature	836
	<i>Salient points</i>	836
	<i>Review questions</i>	837

25. Refrigeration Systems and Psychrometry 840–909

A : Refrigeration Systems

25.1	Refrigeration: what is it?	840
25.2	Refrigerator and heat pump	840
	25.2.1 Rating or capacity of a refrigerating unit	842
	25.2.2 Methods of refrigeration	843
	25.2.3 Applications of refrigeration	845
25.3	Air refrigeration cycles	845
	25.3.1 Reversed Carnot cycle	846
	25.3.2 Bell-Coleman cycle	851
	25.3.3 Open and closed systems	853
25.4	Vapour compression refrigeration	857
	25.4.1 Carnot vapour-compression refrigeration cycle	857
	25.4.2 Vapour compression refrigeration cycle	859
25.5	Refrigerants	870
	25.5.1 An ideal refrigerant – desirable properties	871
	25.5.2 Classification of refrigerants	871
	25.5.3 Selection of a refrigerant	872
	25.5.4 Secondary refrigerants	875
25.6	Vapour absorption system	876
25.7	Electrolux refrigerator	879

B : Psychrometry

25.8	Specific humidity, relative humidity and degree of saturation	880
25.9	Dry bulb temperature and wet bulb temperature	882
25.10	Dew point and adiabatic saturation temperature	883
25.11	Psychrometric chart and processes	889
25.12	Psychrometric processes	892
	25.12.1 Sensible heating	893
	25.12.2 Sensible cooling	895
	25.12.3 Humidification and dehumidification	896
	25.12.4 Heating and humidification	897
	25.12.5 Cooling and dehumidification	897
	25.12.6 Adiabatic mixing	899
25.13	Air-conditioning and human comfort	901
25.14	Applications of air-conditioning	902
25.15	Comfort air-conditioning and its types	902
25.16	Human comfort	902
25.17	Thermal interchange with environment	903
	<i>Salient points</i>	904
	<i>Review questions</i>	906

26. Heat Transfer 910–986

26.1	Modes and basic laws of heat transfer	910
	26.1.1 Conduction	910
	26.1.2 Convection	911
	26.1.3 Radiation	912
