

CONTENTS

UNIT - I

1. Review of Vector Algebra	1-16
1.1 Vectors	1
1.2 Addition of Vectors.....	1
1.3 Rectangular resolution of a Vector	1
1.4 Unit Vector.....	2
1.5 Position Vector of a point	2
1.6 Ratio formula.....	3
1.7 Product of two Vectors	3
1.8 Scalar, or Dot product.....	3
1.9 Useful results	4
1.10 Work done as a Scalar product	4
1.11 Vector product or Cross product.....	4
1.12 Vector Product expressed as a Determinant	5
1.13 Area of Parallelogram.....	5
1.14 Moment of a Force	5
1.15 Angular Velocity	6
1.16 Scalar triple product	6
1.17 Geometrical Interpretation.....	6
1.18 Coplanarity questions	8
1.19 Vector product of three Vectors	11
1.20 Scalar product of four Vectors	14
1.21 Vector product of four Vectors.....	14
2. Differentiation of Vectors	17-59
(Point Function, Gradient, Divergence and Curl of a Vector and their Physical Interpretations)	
2.1 Vector Function	17
2.2 Differentiation of Vectors	17
2.3 Formulae of differentiation.....	18
2.4 Scalar and Vector point functions	20
2.5 Gradient of a scalar function	21
2.6 Geometrical meaning of Gradient, Normal	21
2.7 Normal and Directional Derivative	22
2.8 Divergence of a Vector function	34
2.9 Physical Interpretation of Divergence	34
2.10 cURL	39
2.11 Physical meaning of cURL.....	39

3. Integration of Vectors	60–113
3.1 Line integral.....	60
3.2 Surface Integral	67
3.3 Volume Integral	71
3.4 Green's theorem (For a plane).....	72
3.5 Area of the plane region by Green's theorem.....	76
3.6 Stoke's theorem (Relation between Line Integral and Surface Integral).....	78
3.7 Another method of proving Stoke's theorem	79
3.8 Gauss's theorem of Divergence.....	94
3.9 Deductions from Gauss Divergence theorem.....	109
3.10 Helmholtz theorem.....	111
4. Orthogonal Curvilinear Coordinates	114–127
4.1 Curvilinear Coordinates.....	114
4.2 Differential of an ARC length	115
4.3 Geometrical significance of h_1, h_2, h_3	115
4.4 Differential operator	115
4.5 Divergence.....	116
4.6 CURL.....	117
4.7 Laplacian operator ∇^2	118
4.8 Cylindrical (polar) Co-ordinates.....	118
4.9 Spherical polar Co-ordinates	120
4.10 Transformation of Cylindrical Polar Co-ordinates into $\hat{i}, \hat{j}, \hat{k}$	123
4.11 Conversion of Spherical polar Co-ordinates (r, θ, ϕ) into $\hat{i}, \hat{j}, \hat{k}$	123
4.12 Relation between Cylindrical and Spherical Co-ordinates.....	124
5. Double Integrals	128–154
5.1 Double Integration.....	128
5.2 Evaluation of Double Integral	128
5.3 Evaluation of Double Integrals in polar co-ordinates	133
5.4 Change of order of Integration	138
5.5 Change of Variables.....	148
6. Application of the Double Integrals (Area, Centre of Gravity, Mass, Volume)	155–166
6.1 Introduction	155
6.2 Area in Cartesian Co-ordinates	155
6.3 Area in Polar Co-ordinates	158
6.4 Volume of Solid by rotation of an Area (Double Integral)	161
6.5 Centre of Gravity.....	163
6.6 Centre of Gravity of an ARC.....	165
7. Triple Integration	167–178
7.1 Introduction	167
7.2 Triple Integration.....	169
7.3 Integration by change of Cartesian Coordinates into Spherical Coordinates.....	172

8. Application of Triple Integration

179–203

8.1 Introduction	179
8.2 Volume = $\iiint dx dy dz$	179
8.3 Volume of Solid bounded by Sphere or by Cylinder.....	181
8.4 Volume of Solid bounded by Cylinder or Cone	183
8.5 Volume bounded by a Paraboloid.....	188
8.6 Surface Area	191
8.7 Calculation of Mass.....	195
8.8 Centre of Gravity.....	197
8.9 Moment of Inertia of a Solid	197
8.10 Centre of Pressure.....	201

9. Gamma, Beta Function

204–247

9.1 Gamma function	204
9.2 Prove that.....	206
9.3 Transformation of Gamma function	207
9.4 Beta function	208
9.5 Evaluation of Beta function.....	208
9.6 A property of Beta function.....	209
9.7 Transformation of Beta function	210
9.8 Relation between Beta and Gamma functions.....	211
9.9. Show that.....	211
9.10 Duplication formula.....	218
9.11 To show that.....	219
9.12 To show that.....	220
9.13 Double Integration.....	226
9.14 Dirichlet's Integral (triple integration)	227
9.15 Liouville's extension of Dirichlet theorem.....	228
9.16 Elliptic Integrals	235
9.17 Definition and property.....	235
9.18 Error function	238
9.19 Differentiation under the Integral sign	240
9.20 Leibnitz's rule.....	240
9.21 Rule of Differentiation under the Integral sign when the Limits of Integration are functions of the Parameter.....	244

10. Theory of Errors

248–255

10.1 Numbers	248
10.2 Significant figures.....	248
10.3 Rounding off.....	248
10.4 Types of errors.....	249
10.5 Error due to Approximation of the function	251
10.6 Error in a Series Approximation.....	252
10.7 Order of Approximation	253
10.8 Most probable value and residual.....	253
10.9 Gaussian error.....	254
10.10 Theoretical distributions.....	254

11. Fourier Series	256–295
11.1 Periodic functions	256
11.2 Fourier series	256
11.3 Dirichlet's conditions for a Fourier series	257
11.4 Advantages of Fourier series	257
11.5 Useful Integrals	257
11.6 Determination of Fourier Coefficients (Euler's formulae)	258
11.7 Fourier series for Discontinuous functions	262
11.8 Function defined in two or more sub-ranges	263
11.9 Discontinuous functions	264
11.10 Even function and Odd function	268
11.11 Half-range series, period 0 to π	272
11.12 Change of interval and functions having arbitrary period	275
11.13 Half period series	278
11.14 Parseval's formula	287
11.15 Fourier series in complex form	291
11.16 Practical harmonic analysis	292

UNIT – II

12. Differential Equations of First Order	296–333
12.1 Definition	296
12.2 Order and Degree of a Differential equation	296
12.3 Formation of Differential equations	297
12.4 Solution of a Differential equation	299
12.5 Geometrical meaning of the Differential equation of First order and First degree	299
12.6 Differential equations of the First order and First degree	300
12.7 Variables separable	300
12.8 Homogeneous Differential equations	302
12.9 Equations reducible to Homogeneous form	304
12.10 Linear Differential equations	307
12.11 Equations reducible to the Linear form (Bernoulli equation)	310
12.12 Exact Differential Equation	317
12.13 Equations reducible to the Exact equations	321
12.14 Differential equations reducible to Exact form (By inspection)	325
12.15 Equations of First order and Higher degree	326
12.16 Orthogonal trajectories	328
12.17 Polar equation of the family of Curves	331
13. Linear Differential Equations of Second Order	334–370
13.1 Linear Differential equations	334
13.2 Non linear Differential equations	334
13.3 Linear Differential equations of Second Order with Constant Coefficients	334
13.4 Dimension of space of solution	335
13.5 Non-homogeneous	335
13.6 Homogeneous	335

13.7	Super position or Linearity principle or Fundamental theorem for Homogeneous Differential equation.....	335
13.8	Linear Independence and Dependence.....	336
13.9	Wronskian.....	336
13.10	Existence of Linearly Independence.....	336
13.11	Structure theorem	337
13.12	Superposition principle does not hold good for a Non homogeneous Differential equation or Nonlinear equation	337
13.13	Abel's formula	339
13.14	Complete solution = Complementary function + Particular Integral	342
13.15	Method for finding the Complementary function.....	343
13.16	Rules to find particular integral	351
13.17	$\frac{1}{f(D)} e^{ax} = \frac{1}{f(a)} e^{ax}$	351
13.18	$\frac{1}{f(D)} x^n = [f(D)]^{-1} x^n$	354
13.19	$\frac{1}{f(D^2)} \sin ax = \frac{\sin ax}{f(-a^2)}$ $\frac{1}{f(D^2)} \cos ax = \frac{\cos ax}{f(-a^2)}$	355
13.20	$\frac{1}{f(D)} \cdot e^{ax} \cdot \phi(x) = e^{ax} \cdot \frac{1}{f(D+a)} \cdot \phi(x)$	360
13.21	To find the value of $\frac{1}{f(D)} x^n \sin ax$	366
13.22	General method of finding the particular integral of any function $\phi(x)$	368
14.	Cauchy–Euler Equations, Method of Variation of Parameters 371–395	
14.1	Cauchy Euler homogeneous linear equations.....	371
14.2	Legendre's homogeneous Differential equations	378
14.3	Method of variation of Parameters.....	381
14.4	Method of undetermined Coefficients.....	391
15.	Differential Equation of other Types 396–420	
15.1	Introduction	396
15.2	Equation of the type $\frac{d^2 y}{dx^2} = f(x)$	396
15.3	Equation of the type $\frac{d^n y}{dx^n} = f(y)$	397
15.4	Equations which do not contain 'y' Directly	400
15.5	Equations that do not Contain 'x' Directly	402
15.6	Equation whose one solution is known	403
15.7	Normal form (removal of first derivative).....	409
15.8	Method of solving Linear Differential equations by changing the Independent variable	412
15.9	Method of variation of Parameters.....	417

16. Coupled Differential Equations	421–433
16.1 Coupled Differential equations.....	421
17. Applications to Differential Equations	434–477
17.1 Introduction	434
17.2 Electrical circuit.....	434
17.3 Second Order differential equation.....	438
17.4 Mechanical Engineering problems	447
17.5 Vertical Motion.....	449
17.6 Vertical Elastic String	453
17.7 Horizontal Elastic String	453
17.8 Simple Harmonic Motion.....	455
17.9 The Simple Pendulum	460
17.10 Oscillations of a Spring	461
17.11 Beam	470
17.12 Projectile.....	473
18. Calculus of Variation	478–490
18.1 Introduction	478
18.2 Functionals	478
18.3 Definition.....	478
18.4 Euler's equation is	479
18.5 Extremal	481
18.6 Isoperimetric problems.....	486
18.7 Functionals of second order derivatives	489
19. Maxima and Minima of Functions (two variables)	491–519
19.1 Maximum value.....	491
19.2 Conditions for Extremum values.....	491
19.3 Working rule to find Extremum values.....	492
19.4 Lagrange method of undetermined Multipliers.....	503

UNIT - III

20. Complex Numbers	520–567
20.1 Introduction	520
20.2 Complex numbers.....	520
20.3 Geometrical representation of Imaginary numbers	520
20.4 Argand Diagram	520
20.5 Equal Complex numbers	520
20.6 Addition of Complex numbers	521
20.7 Addition of Complex numbers by Geometry	521
20.8 Subtraction.....	521
20.9 Powers of i	522
20.10 Multiplication	522
20.11 i (iota) as an operator.....	523

20.12	Conjugate of a Complex number.....	524
20.13	Division	524
20.14	Division of Complex numbers by Geometry.....	525
20.15	Modulus and Argument	528
20.16	Polar form.....	535
20.17	Types of Complex numbers.....	535
20.18	Square root of a Complex number.....	536
20.19	Exponential and circular functions of Complex Variables	538
20.20	De Moivre's Theorem (by exponential function).....	539
20.21	De Moivre's Theorem (by induction).....	539
20.22	Roots of a complex number.....	544
20.23	Circular functions of Complex numbers	547
20.24	Hyperbolic functions	548
20.25	Relation between Circular and Hyperbolic functions	548
20.26	Formulae of Hyperbolic functions.....	548
20.27	Separation of Real and Imaginary parts of Circular functions	553
20.28	Separation of Real and Imaginary parts of Hyperbolic functions	554
20.29	Logarithmic function of a Complex Variable	559
20.30	Inverse functions	561
20.31	Inverse Hyperbolic functions	561
20.32	Some other Inverse functions	563

21. Expansion of Trigonometric Functions 568–580

21.1	Expansion of $\sin n\theta$, $\cos n\theta$ in powers of $\sin \theta$, $\cos \theta$	568
21.2	Expansion of $\cos^n \theta$, $\sin^n \theta$ in terms of sines and cosines of multiples of θ	570
21.3	Summation of sines and cosines series: 'C + iS' method	572
21.4	Approximation.....	579

22. Functions of Complex Variable, Analytic Function 581–628

22.1	Introduction	581
22.2	Complex variable.....	581
22.3	Functions of a complex variable.....	581
22.4	Neighbourhood of Z_0	581
22.5	Limit of a function of a complex variable	582
22.6	Continuity.....	584
22.7	Continuity in terms of real and imaginary parts	584
22.8	Differentiability	585
22.9	Analytic function	587
22.10	The necessary condition for $f(z)$ to be analytic.....	588
22.11	Sufficient condition for $f(z)$ to be analytic	589
22.12	C–R equations in polar form	599
22.13	Derivative of w in polar form	599
22.14	Orthogonal Curves.....	602
22.15	Harmonic function.....	602
22.16	Applications to flow problems.....	606
22.17	Velocity potential.....	607

22.18	Method to find the Conjugate function.....	607
22.19	Milne Thomson method (to construct an analytic function)	616
22.20	Working rule: to construct an Analytic function by Milne Thomson method.....	617
22.21	Partial Differentiation of function of Complex Variable	623

23. Conformal Transformation

629–660

23.1	Geometrical representation.....	629
23.2	Transformation	629
23.3	Conformal Transformation	630
23.4	Theorem. If $f(z)$ is analytic, mapping is conformal	631
23.5	Theorem	632
23.6	Translation $w = z + c$,.....	634
23.7	Rotation $w = ze^{i\theta}$	634
23.8	Magnification	635
23.9	Magnification and rotation $w = cz$	635
23.10	Inversion and reflection	637
23.11	Bilinear Transformation (Möbius Transformation).....	640
23.12	Invariant points of Bilinear Transformation.	641
23.13	Cross-ratio	641
23.14	Theorem.....	641
23.15	Properties of Bilinear Transformation	641
23.16	Methods to find Bilinear Transformation	642
23.17	Inverse point with respect to a circle	647
23.18	Transformation: $w = z^2$	652
23.19	Transformation: $w = Z^n$ ($n \in N$).....	654
23.20	Transformation: $w = z + \frac{1}{z}$	654
23.21	Transformation: $w = e^z$	654
23.22	Transformation:	656
23.23	Schwarz-Christoffel transformation	658

24. Complex Integration

661–689

(Cauchy's Integral Theorem, Cauchy's Integral Formula for Derivatives of Analytic Function)

24.1	Introduction (Line Integral).....	661
24.2	Important definitions	670
24.3	Cauchy's Integral Theorem	671
24.4	Extension of Cauchy's theorem to multiple connected region.....	672
24.5	Cauchy integral formula	673
24.6	Cauchy integral formula for the Derivative of an Analytic function.....	673
24.7	Morera theorem (converse of Cauchy's Theorem).....	674
24.8	Cauchy's Inequality	674
24.9	Liouville theorem	675
24.10	Fundamental Theorem of Algebra	676
24.11	Poisson Integral formula for a Circle.....	676
24.12	Poisson Integral formula for a half Plane	678

25. Taylor's and Laurent's Series**690-711**

25.1 Introduction	690
25.2 Convergence of a series of Complex terms	690
25.3 Power Series	690
25.4 Region of Convergence	691
25.5 Radius of Convergence of Power series	691
25.6 Method of expansion of a function	692
25.7 Taylor's Theorem	692
25.8 Laurent's Theorem	702
25.9 If $f(z)$ has a pole at $z = a$ then $ f(z) \rightarrow \infty$ as $z \rightarrow a$	707

26. The Calculus of Residues (Integration)**712-759**

26.1 Zero of Analytic function	712
26.2 Singular point	712
26.3 Theorem	716
26.4 Definition of the residue at a pole	717
26.5 Residue at Infinity	717
26.6 Method of finding residues	717
26.7 Residue by definition	719
26.8 Formula: residue = $\lim_{z \rightarrow a} (z - a) f(z)$	719

26.9 Formula: residue of $f(a) = \frac{1}{(n-1)!} \left\{ \frac{d^{n-1}}{dz^{n-1}} [(z-a)^n f(z)] \right\}_{z=a}$ 721

26.10 Formula: res. (at $z = a$) = $\frac{\phi(a)}{\psi'(a)}$ 722

26.11 Formula: residue = Coefficient of $\frac{1}{t}$ where $z = \frac{1}{t}$ 723

26.12 Residue theorem 725

26.13 Evaluation of Real definite Integrals by Contour Integration 731

26.14 Integration Round Unit Circle of the type 731

26.15 Evaluation of $\int_{-\infty}^{\infty} \frac{f_1(x)}{f_2(x)} dx$ where $f_1(x)$ and $f_2(x)$ are polynomials in x 742

26.16 Rectangular Contour 753

26.17 Indented Semi-circular Contour 756

27. Series Solutions of Second Order Differential Equations 760-791

27.1 Introduction	760
27.2 Power series solutions of Differential equations	760
27.3 Analytic function	760
27.4 Ordinary point	761
27.5 Solution of the Differential equation when $x = 0$ is an Ordinary point <i>i.e.</i> when p does not vanish for $x = 0$	761
27.6 Working rule to solve a differential equation if $x = 0$ is an Ordinary point of the equation	761
27.7 Singular points about $x = a$	765

27.8 Singular point about $x = 0$	767
27.9 Frobenius method	768

28. Legendre's Functions **792-823**

28.1 Legendre's equation.....	792
28.2 Legendre's polynomial $p_n(x)$	794
28.3 Legendre's function of the second kind <i>i.e.</i> $Q_n(x)$	794
28.4 General solution of Legendre's equation.....	795
28.5 Rodrigue's formula.....	795
28.6 Legendre's polynomials.....	797
28.7 A generating function of Legendre's polynomial.....	799
28.8 Orthogonality of Legendre polynomials.....	806
28.9 Recurrence formulae.....	809
28.10 Laplace's first definite integral for $p_n(x)$	813
28.11 Laplace's second definite integral for $p_n(x)$	814
28.12 Fourier-Legendre expansion.....	816
28.13 Strum-Liouville equation.....	821
28.14 Orthogonality.....	822
28.15 Orthogonality of eigen functions.....	822

29. Bessel's Functions **824-853**

29.1 Bessel's equation.....	824
29.2 Solution of Bessel's equation.....	824
29.3 Bessel's functions, $j_n(x)$	826
29.4 Bessel's function of the Second kind of Order n	828
29.5 Recurrence formulae.....	831
29.6 Equations reducible to Bessel's equation.....	842
29.7 Orthogonality of Bessel function.....	844
29.8 A generating function for $j_n(x)$	845
29.9 Trigonometric expansion involving Bessel functions.....	846
29.10 Bessel's Integral.....	847
29.11 Fourier-Bessel expansion.....	849
29.12 Ber and Bei functions.....	851

30. Hermite Function **854-865**

30.1 Introduction.....	854
30.2 Hermite's equation.....	854
30.3 Generating function of Hermite polynomials (Rodrigue formula).....	857
30.4 Orthogonal property.....	859
30.5 Recurrence formulae for $h_n(x)$ of Hermite equation.....	860

31. Laguerres Functions **866-872**

31.1 Laguerres function.....	866
31.2 Laguerres function for Different values of n	868
31.3 Generating function of Laguerre Polynomial.....	868
31.4 Recurrence relation.....	869
31.5 Orthogonal property.....	871

UNIT - IV

32. Abstract Vector Spaces

873–887

32.1	Introduction	873
32.2	Some useful definitions	873
32.3	Types of Sets.....	873
32.4	Binary operation	874
32.5	Semi-group	874
32.6	Commutative Semi-group	875
32.7	Group.....	875
32.8	Commutative Group (Abelian Group).....	876
32.9	Ring	877
32.10	Types of Rings.....	878
32.11	Special Types of Ring.....	878
32.12	Integral Domain.....	879
32.13	Field.....	879
32.14	Vector space.....	880
32.15	External composition of the Vector space V	886
32.16	Internal composition of the Vector space V	887

33. Vectors in R^n

888–922

33.1	Introduction	888
33.2	Ordered n -tuples of Real numbers.....	888
33.3	Vectors in R^n	888
33.4	Equality of two n -tuples	888
33.5	Addition of two n -tuples.....	889
33.6	Subtraction of two n -tuples	889
33.7	Multiplication of n -tuples by Real number	889
33.8	Properties of vector in R^n	889
33.9	Euclidean norm (or magnitude).....	890
33.10	Euclidean distance	890
33.11	Unit vector.....	890
33.12	Theorem 1	891
33.13	Cauchy–Schwarz Inequality	891
33.14	Theorem (properties of the Euclidean norm)	891
33.15	Theorem.....	892
33.16	Theorem (Pythagorean theorem in R^n).....	892
33.17	Theorem (relationship between Euclidean inner product and the norm)	892
33.18	Linear combination of vectors in R^n	895
33.19	Linear dependence and independence of Vectors.....	895
33.20	Linear span of a set.....	902
33.21	Vector subspaces.....	904
33.22	Criterion for identifying subspaces	904
33.23	Algebra of Vector subspaces.....	907
33.24	Smallest subspace containing a subset	908

33.25	Linear sum of two sub spaces	909
33.26	Direct sum of Vector sub-spaces	909
33.27	Quotient space	912
33.28	Basis	914
33.29	Dimension or rank of a Vector space.....	914
34.	Linear Transformations	923–937
34.1	Linear Transformations	923
34.2	Matrix of a Linear transformation	926
34.3	Change of basis.....	929
34.4	Co-domain of a Linear Transformation.....	930
34.5	Rank and nullity of a Linear Transformation	931
34.6	Product of Linear Transformations	931
34.7	Product of two Linear Transformation is a Linear Transformation.....	931
34.8	Invertible Linear Transformation	931
34.9	Similarity of Matrices	934
34.10	Similarity of Linear Transformations	935
35.	Basis of Null Space, Row Space and Column Space	938–947
35.1	Introduction	938
35.2	Row Vectors	938
35.3	Column Vectors	938
35.4	Row space	939
35.5	Column space	939
35.6	Null space	939
35.7	Dimension of a Vector space	940
35.8	Nullity.....	940
35.9	Theorem 1. For basis of row space and column space of echelon form matrix	941
35.10	Basis of row space of a General Matrix	941
35.11	Method ii	943
35.12	Method iii.	943
35.13	Rank of a Matrix.....	944
35.14	Rank nullity theorem	944
36.	Real Inner Product Spaces	948–975
36.1	Introduction	948
36.2	Inner product spaces.....	948
36.3	Orthogonal Vectors (perpendicular vectors).....	951
36.4	Orthonormal Vectors.....	952
36.5	Gram-schmidt Orthogonalisation process	953
36.6	Schwarz Inequality	955
36.7	Unitary Transformation	957
36.8	Orthogonal Transformation	961
36.9	Orthogonal Projections	962
36.10	Decomposition of Vector into the sum of two Projections.....	963
36.11	Orthogonal component	963

36.12	Least square approximation	963
36.13	Approximation theorem.....	964
36.14	Solution of the Least Square problem	964
36.15	Linear Transformation of Matrices.....	969
36.16	Orthogonal Transformation of Matrices.....	970

37. Determinants **976–1007**

37.1	Introduction	976
37.2	Determinant as eliminant.....	976
37.3	Minor.....	977
37.4	Cofactor	977
37.5	Properties of Determinants	980
37.6	Factor theorem.....	996
37.7	Special types of Determinants	999
37.8	Application of determinants	999
37.9	Solution of simultaneous Linear equations by Determinants (Cramer's rule).....	1002
37.10	Rule for multiplication of two Determinants.....	1006

38. Algebra of Matrices **1008–1033**

38.1	Definition.....	1008
38.2	Various types of Matrices	1008
38.3	Addition of Matrices.....	1012
38.4	Properties of Matrix addition.....	1013
38.5	Subtraction of Matrices	1014
38.6	Scalar multiple of a Matrix.....	1014
38.7	Multiplication	1015
38.8	$(AB)' = B'A'$	1015
38.9	Properties of Matrix multiplication	1015
38.10	Adjoint of a Square Matrix.....	1022
38.11	Mathematical Induction.....	1022
38.12	Property of Adjoint Matrix	1024
38.13	Inverse of a Matrix	1024
38.14	Elementary Transformations	1028
38.15	Elementary Matrices.....	1028
38.16	Theorem.....	1029
38.17	To compute the Inverse of a Matrix from elementary	1029
38.18	The inverse of a Symmetric Matrix.....	1029

39. Rank of Matrix **1034–1045**

39.1	Rank of a Matrix.....	1034
39.2	Normal form (canonical form)	1034
39.3	Rank of Matrix by Triangular form.....	1040

40. Consistency of Linear System of Equations and their Solution (Linear Dependence) **1046–1076**

40.1	Solution of simultaneous equations.....	1046
------	---	------

40.2	Types of linear equations.....	1049
40.3	Consistency of a system of linear equations.....	1049
40.4	Homogeneous equations.....	1059
40.5	Cramer's rule.....	1061
40.6	Vectors.....	1064
40.7	Linear Dependence and Independence of Vectors.....	1064
40.8	Linearly dependence and independence of Vectors by Rank method.....	1067
40.9	Another method (adjoint method) to solve Linear equations.....	1069
40.10	Partitioning of Matrices.....	1071
40.11	Multiplication by sub-Matrices.....	1072

41. Eigen Values, Eigen Vector, Cayley Hamilton Theorem, Diagonalisation (Complex and Unitary Matrices) 1077–1131

41.1	Introduction.....	1077
41.2	Eigen values.....	1077
41.3	Cayley-Hamilton theorem.....	1083
41.4	Power of matrix (By Cayley Hamilton theorem).....	1087
41.5	Characteristic Vectors or Eigen vectors.....	1089
41.6	Properties of Eigen vectors.....	1090
41.7	Orthogonal Vectors.....	1090
41.8	Non-symmetric matrices with non-repeated Eigen values.....	1092
41.9	Non-symmetric matrix with repeated Eigen values.....	1095
41.10	Symmetric matrices with non repeated Eigen values.....	1099
41.11	Symmetric matrices with repeated Eigen values.....	1101
41.12	Matrix having only one linearly independent Eigen vector.....	1102
41.13	Matrix having only two Eigen vectors.....	1103
41.14	Complex eigen values.....	1104
41.15	Algebraic multiplicity.....	1105
41.16	Geometric multiplicity.....	1105
41.17	Regular eigen value.....	1105
41.18	Similarity transformation.....	1107
41.19	Diagonalisation of a matrix.....	1107
41.20	Orthogonal transformation of a symmetric matrix to diagonal form.....	1108
41.21	Theorem on diagonalization of a Matrix.....	1108
41.22	Powers of a Matrix (by diagonalisation).....	1114
41.23	Sylvester theorem.....	1116
41.24	Complex Matrices.....	1119
41.25	Theorem.....	1119
41.26	Transpose of conjugate of a Matrix.....	1120
41.27	Hermitian Matrix.....	1121
41.28	The characteristic roots of a Hermitian Matrix are all real.....	1122
41.29	Skew-hermitian Matrix.....	1122
41.30	Characteristic roots of a skew-hermitian matrix is either zero or purely an imaginary number.....	1126
41.31	Periodic Matrix.....	1126
41.32	Idempotent Matrix.....	1126

41.33	Prove that the eigen values of an Idempotent Matrix are either zero or unity	1126
41.34	Unitary matrix	1128
41.35	The modulus of each characteristic root of a Unitary Matrix is unity.	1130
42.	First Order Lagrange's Linear and Non-Linear Partial Differential Equations	1132–1155
42.1	Partial Differential equations	1132
42.2	Order	1132
42.3	Method of forming Partial Differential equations	1132
42.4	Solution of equation by Direct integration	1133
42.5	Lagrange's linear equation is an equation of the type	1135
42.6	Working rule to solve $p_p + q_q = r$	1136
42.7	Method of multipliers	1138
42.8	Partial differential equations non-linear in p and q	1144
42.9	Charpit's method	1150
43.	Linear and Non-linear Partial Differential Equations with Constant Coefficients of 2nd order	1156–1185
43.1	Linear homogeneous partial Differential equations of nth order with constant coefficients	1156
43.2	Rules for finding the Complementary function	1156
43.3	General rules for finding the particular Integral	1159
43.4	P.I. of any function	1169
43.5	Non-homogeneous linear equations	1174
43.6	If the equation is of the form	1175
43.7	Monge's method	1179
43.8	Classification of partial differential equations	1182
44.	Applications of Partial Differential Equations	1186–1242
44.1	Introduction	1186
44.2	Method of separation of variables	1186
44.3	Equation of vibrating string	1192
44.4	Solution of wave equation by D'Alembert's method	1205
44.5	One dimensional heat flow	1207
44.6	Two dimensional heat flow	1216
44.7	Equation of heat flow in two dimensions in polar coordinates	1226
44.8	Transmission line equations	1230
44.9	Laplace equation	1232
44.10	Vibrating membrane	1236
44.11	Solution of the equation of the vibrating membrane (Rectangular membrane)	1237
45.	Integral Transforms	1243–1299
45.1	Introduction	1243
45.2	Integral Transforms	1243
45.3	Fourier Integral theorem	1244
45.4	Fourier Sine and Cosine Integrals	1245

45.5	Fourier's Complex Integral	1246
45.6	Fourier Transforms	1251
45.7	Fourier Sine and Cosine transforms	1252
45.8	Properties of Fourier Transforms.....	1270
45.9	Convolution	1272
45.10	Parseval's identity for Fourier transforms	1273
45.11	Parseval's identity for cosine transform	1273
45.12	Parseval's identity for sine transform	1273
45.13	Fourier transform of derivatives	1277
45.14	Relationship between Fourier and Laplace transforms	1278
45.15	Solution of boundary value problems by using integral transform	1278
45.16	Fourier transforms of Partial derivative of a function	1283
45.17	Applications to simple Heat Transfer equations.....	1284
45.18	Finite Fourier transforms	1287
45.19	Finite Fourier Sine and Cosine Transforms of Derivatives	1294

46. Laplace Transform 1300–1333

46.1	Introduction	1300
46.2	Laplace Transform.....	1300
46.3	Important formulae.....	1300
46.4	Properties of Laplace Transforms.....	1304
46.5	Change of scale property	1304
46.6	Heaviside's shifting theorem (second translation property).....	1305
46.7	Existence theorem	1307
46.8	Laplace Transform of the Derivative of $f(t)$	1308
46.9	Laplace Transform of Derivative of order n	1308
46.10	Laplace Transform of Integral of $f(t)$	1309
46.11	Laplace Transform of $t.f(t)$ (multiplication by t)	1310
46.12	Initial and final value theorems	1310
46.13	Exponential integral function	1311
46.14	Laplace Transform of $\frac{1}{t} f(t)$ (division by t).....	1313
46.15	Laplace Transform of error function	1316
46.16	Complementary error function	1317
46.17	Unit step function	1318
46.18	Laplace Transform of unit function.....	1318
46.19	Second shifting theorem	1318
46.20	Theorem $L[f(t)u(t-a)] = e^{-as} L[f(t+a)]$	1319
46.21	Periodic functions.....	1322
46.22	Convolution theorem.....	1327
46.23	Laplace Transform of bessel functions $J_0(x)$ and $J_1(x)$	1328
46.24	Evaluation of integrals.....	1329
46.25	Formulation of Laplace Transform.....	1331
46.26	Properties of Laplace Transform	1332

47. Inverse Laplace Transforms (Solution of differential equations)

1334–1378

47.1 Inverse Laplace Transforms	1334
47.2 Important formulae	1334
47.3 Multiplication by s	1337
47.4 Division by s (multiplication by $\frac{1}{s}$)	1338
47.5 First shifting property	1339
47.6 Second shifting property	1340
47.7 Inverse Laplace transforms of Derivatives	1342
47.8 Inverse Laplace transform of Integrals	1345
47.9 Partial fractions method	1345
47.10 Inverse Laplace Transform by Convolution	1349
47.11 Heaviside Inverse formula of $\frac{F(s)}{G(s)}$	1353
47.12 Solution of Differential equations by Laplace Transforms	1354
47.13 Electric circuit	1364
47.14 Solution of simultaneous Differential equations by Laplace Transforms	1368
47.15 Solution of partial Differential equation by Laplace Transform	1376

48. Dirac-Delta Function

1379–1381

48.1 Definition	1379
48.2 Impulse function	1379
48.3 Properties	1379
48.4 Laplace Transform	1381
48.5 Fourier Transform	1381

49. Tensor Analysis

1382–1410

49.1 Introduction	1382
49.2 Co-ordinate transformation	1382
49.3 Summation convention	1383
49.4 Summation of co-ordinates	1383
49.5 Relation between the direction cosines of three mutually perpendicular straight lines	1384
49.6 Transformation of velocity components on change from one system of rectangular axes to another	1385
49.7 Rank of a tensor	1385
49.8 First order tensors	1385
49.9 Second order tensors	1386
49.10 Tensors of any order	1386
49.11 Tensor of zero order	1386
49.12 Algebraic operations on tensors	1386
49.13 Product of two tensors	1387
49.14 Quotient law of tensors	1387
49.15 Contraction theorem	1388

49.16	Symmetric and Antisymmetric tensors.....	1388
49.17	Symmetric and Skew symmetric tensors.....	1388
49.18	Theorem.....	1389
49.19	A fundamental property of tensors.....	1389
49.20	Zero tensor.....	1389
49.21	Two special tensors.....	1390
49.22	Kronecker tensor.....	1391
49.23	Isotropic tensor.....	1391
49.24	Relation between alternate and Kronecker tensor.....	1391
49.25	Matrices and tensors of First and Second order.....	1392
49.26	Scalar and vector products of two Vectors.....	1393
49.27	The three scalar invariants of a Second order tensor.....	1393
49.28	Singular and non-singular tensors of Second order.....	1393
49.29	Reciprocal of a non-singular tensor.....	1393
49.30	Eigen values and eigen vectors of a tensor of Second order.....	1394
49.31	Theorem.....	1395
49.32	Reality of the eigen values.....	1395
49.33	Association of a skew symmetric tensors of order two and vectors.....	1395
49.34	Tensor fields.....	1396
49.35	Gradient of tensor fields: Gradient of a scalar function.....	1396
49.36	Gradient of Vector.....	1396
49.37	Divergence of Vector point function.....	1397
49.38	Curl of a Vector point function.....	1397
49.39	Second order Differential operators.....	1398
49.40	Tensorial form of Gauss's and Stoke's theorem.....	1398
49.41	Stoke's theorem.....	1399
49.42	Relation between alternate and Kronecker tensor.....	1399
49.43	The three scalar invariants of a Second order tensor.....	1400
49.44	Tensor analysis.....	1400
49.45	Conjugate or reciprocal Tensors.....	1404
49.46	Christoffel symbols.....	1404
49.47	Transformation law for Second kind.....	1406
49.48	Contravariant, covariant and mixed tensor.....	1409
	Index.....	1410
