Foreword	xxi		
Preface	xxiii		
1. Introduction to microencapsulation and controlled delivery in foods	1	3. Factors and mechanisms in microencapsulation	29
<i>Robert Sobel, Ronald Versic and Anilkumar G. Gaonkar</i>		<i>Niraj Vasisht</i>	
1.1 Introduction	1	3.1 Introduction	29
1.2 Microencapsulation defined	1	3.2 Structural design of the microcapsule	29
1.3 Reasons for microencapsulation	1	3.3 Microcapsule or microsphere type	29
1.4 Types of microcapsules	2	3.4 Microcapsule size, shape, and payload	30
1.5 Historical account of microencapsulation	3	3.5 Physicochemical factors	31
1.6 Materials used for microencapsulation purposes	5	3.5.1 Molecular weight of the active agent	32
1.7 Microencapsulation techniques used within the food industry	6	3.5.2 Functional moiety and surface charge	32
1.8 Trends in microencapsulation	6	3.5.3 Concentration	32
1.9 Challenges in microencapsulation of food ingredients	7	3.5.4 Solubility	32
1.10 The future of microencapsulation of food ingredients	8	3.5.5 Wettability	32
References	8	3.5.6 Temperature	33
		3.5.7 Process factors	33
		3.6 Mechanism of diffusion	33
		3.6.1 Zero-order or pseudo-zero-order diffusion model	34
		3.6.2 Fickian diffusion model	35
		3.6.3 First-order diffusion model	35
		3.6.4 Higuchi's diffusion model	36
		3.6.5 Case II diffusion	36
		3.6.6 Osmosis	36
		3.7 Conclusion	37
		References	38
2. Review of microencapsulation patent landscape for the food and beverage industries	11	4. Applications of mass and heat transfer in microencapsulation processes	39
<i>Robert Sobel, Hayden Munt and Nikhil Gupta</i>		<i>Niraj Vasisht</i>	
2.1 Introduction	11	4.1 Introduction	39
2.2 Innovation trend	11	4.2 Mechanism of diffusion	40
2.3 Microencapsulation technology-type advancement	15	4.3 Zero-order or pseudo-zero-order diffusion model	40
2.4 Jurisdiction analysis	18	4.4 Fickian diffusion model	41
2.5 Word cloud analysis	19	4.4.1 Mass transfer in a microsphere morphology	42
2.6 Main industrial and academic players	20		
2.7 Largest invention families	22		
2.8 Top market-valued patents	22		
2.9 Key patent matters	24		
2.10 Licensing	26		
2.11 Conclusion	27		

4.4.2	Unsteady-state diffusion from a microsphere	43	7.2	Technologies	73
4.4.3	Mass transfer in a microcapsule morphology	43	7.3	Computational optimization	73
4.4.4	Analogy to heat transfer	45	7.4	Analyzing the drying process of a droplet	74
4.5	First-order diffusion model	46	7.5	Drying kinetics as input for computational fluid dynamics	76
4.6	Conclusion	46	7.5.1	Spray drying equipment and controls	76
References		46	7.5.2	Temperature control	76
5.	Overview of microencapsulation process technologies	47	7.5.3	Flexible spray drying, agglomeration, and granulates	76
	<i>James Oxley</i>		7.5.4	Cleaning-in-place	77
5.1	Introduction	47	7.5.5	Sanitary bag filters	77
5.2	Process components	47	7.5.6	Process controls	79
5.3	Processes	48	7.5.7	Process monitoring	79
5.3.1	Atomization	49	7.6	Conclusion	80
5.3.2	Spray coating	49	References		80
5.3.3	Coextrusion	49	8.	Fluid bed coating-based microencapsulation	83
5.3.4	Emulsion based process	50		<i>Charles Frey</i>	
5.3.5	Other	50	Abbreviations		83
5.4	Comparisons	51	8.1	Introduction	84
5.4.1	Size	51	8.2	Wurster (bottom spray)	85
5.4.2	Morphology	51	8.2.1	Design	85
5.4.3	Payload	53	8.2.2	Wurster process control parameters	90
5.4.4	Materials	54	8.2.3	Particle size	104
5.4.5	Production scale	55	8.3	Top spray	106
5.4.6	Cost	55	8.4	Tangential spray	107
5.5	Emerging processes and trends	56	8.5	Core materials	109
5.6	Process selection	56	8.6	Coating materials	110
References		57	8.7	Applications	110
6.	Atomization and spray drying processes	59	8.7.1	Uniformity	111
	<i>Joseph P. Szczap and Irwin C. Jacobs</i>		8.7.2	Protection	111
6.1	Introduction	59	8.7.3	Handling	111
6.2	Atomization	61	8.7.4	Granulation	112
6.3	Drying configurations	66	8.7.5	Controlled release	112
6.3.1	Mass transfer and heat transfer considerations	69	8.8	Cost	113
6.4	Operational practice	70	8.9	Conclusion	113
6.5	Feed preparation	70	References		113
6.6	Recent advances in atomization and spray-drying processes	71	9.	Extrusion-based microencapsulation for the food industry	117
6.7	Conclusion	71		<i>Jenni Harrington, Martin Schaefer and Tony Listro</i>	
References		71	9.1	Introduction	117
7.	New advances in spray-drying processes	73	9.2	Mixing	119
	<i>Karin Nordström Dyvelkov, Jakob Sloth Overgaard and Søren Juhl Pedersen</i>		9.3	Properties and characterization of amorphous solids	119
7.1	Introduction	73	9.4	Evolution of extrusion technology	120
			9.5	Conclusion	122
			References		122

10. Spheronization, granulation, pelletization, and agglomeration processes	123	12. Monodispersed microencapsulation technologies	155
<i>Michael Jacob</i>		<i>Nathan H. Dormer, Cory J. Berklund and Milind Singh</i>	
10.1 Introduction	123	12.1 Introduction	155
10.2 Basic equipment	125	12.2 Monodisperse particle fabrication technologies	155
10.3 Batch fluidized beds for drying, agglomeration, and coating	126	12.2.1 Microfluidics	155
10.4 Continuous fluidized beds for drying, agglomeration, spray granulation, and coating	127	12.2.2 Electrohydrodynamic spraying	157
10.5 Procell type of continuous spouted beds for drying, agglomeration, spray granulation, and coating	129	12.2.3 Jet cutting	159
10.6 Technical options for pelletization	130	12.2.4 Rotary disk atomization	159
10.7 Technical options for high-shear granulation	131	12.2.5 Vibratory process	161
10.8 Technical options for extrusion	132	12.2.6 Flow focusing	162
10.9 Application case studies	132	12.2.7 Vibratory process combined with a carrier stream	163
10.10 Formulation of enzymes	132	12.3 Conclusion	165
10.11 Formulation of vitamins	134	References	165
10.12 Encapsulation of volatile ingredients	135	13. Microencapsulation by complex coacervation processes	169
10.13 Conclusion	135	<i>Xiang Ren, Yanjun Liu, Wenzhong Wu and Wei Zhang</i>	
References	136	13.1 Introduction	169
11. Annular nozzle in laminar flow encapsulation processes	137	13.2 Historical theories and recent developments	170
<i>Thorsten Brandau</i>		13.3 Selection of shell wall material	171
11.1 Introduction	137	13.3.1 Proteins	172
11.2 Process technologies	138	13.3.2 Polysaccharides	173
11.2.1 Laminar flow breakup	138	13.4 Coacervation encapsulation process	175
11.2.2 Vibrational drip casting	139	13.5 Parameters in coacervation	176
11.2.3 Submerged nozzle	141	13.5.1 Material properties	176
11.2.4 Flow focusing	142	13.5.2 pH	177
11.2.5 Centrifugal extrusion and spinning disk	143	13.5.3 Ionic strength	177
11.2.6 General principle	143	13.5.4 Temperature	178
11.3 Equipment	144	13.5.5 Mixing ratio	178
11.3.1 Nisco engineering	144	13.5.6 Total polymer concentration	178
11.3.2 Buchi	145	13.5.7 Shear strength and rheology	179
11.3.3 BRACE	148	13.5.8 Charge density	179
11.3.4 Freund Corporation	149	13.6 Characterization of coacervate microcapsules	180
11.3.5 Other annular jet systems	149	13.6.1 Structure and morphology	180
11.4 Materials	149	13.6.2 Rheological properties	182
11.4.1 Encapsulation of hydrophobic materials	150	13.6.3 Size and size distribution of microcapsules	182
11.4.2 Encapsulation of hydrophilic agents	152	13.6.4 Encapsulation efficiency	182
11.5 Conclusion	153	13.7 Applications	183
References	154	13.7.1 Stability	183
		13.7.2 Controlled release	183
		13.7.3 Bioavailability	184

13.7.4	Limitation of complex coacervation microencapsulation processes	185
