

CONTENTS

1. Maintenance Models and Methodologies. 2. Big Data and IoT Applications for Reliability Improvement. Reliability Redundancy Allocation Problems. Risk and Reliability Analysis. Fault Tree Analysis in Hardware and Software Systems. 6. Evolutionary Algorithms for Reliability Analysis. Fuzzy Reliability Analysis. 8. Petri Net Model for Repairable Systems. 9. Systems Safety and Performance Analysis. 10. Evidence Reliability. 11. Dynamic Reliability of Sensor. 12. Risk Aversion in Supply Chain Management. 13. Risk management models of operations problem. 14. The Application in Business Processes.
