

- Contents
- List of figures
- List of tables
- Preface
- Acknowledgements
- 1 Introduction to textile pollution
- Part 1 Environmental problems
- 2 Microfibre methodologies for the field and laboratory
- 3 Animals and microplastics: ingestion, transport, breakdown, and trophic transfer
- 4 Clothes encounters of the microfibre kind: the effects of natural and synthetic textiles on organisms
- 5 Toxic chemicals in textiles and the role of microplastic fibres as a source and vector for chemicals to the environment
- Part 2 Textile solutions
- 6 Microfibre shedding from textiles during laundering: different quantification methods but common findings
- 7 Wastewater treatment approaches to remove microplastics: microfibre incidence and fate
- 8 Degradation of fibrous microplastics in the marine environment
- 9 Sourcing and re-sourcing end-of-use textiles
- 10 Innovative approaches to mitigate microfibre pollution
- 11 Policies and perspectives on regulating microplastic fibre pollution
- 12 Summary
- Index
