

Contents

1. Matter and energy : an atomic perspective
2. Atoms, ions, molecules : the building blocks of matter
3. Atomic structure : explaining the properties of elements
4. Chemical bonding : understanding climate change
5. Bonding theories : explaining molecular geometry
6. Intermolecular forces : attractions between particles
7. Stoichiometry : mass relationships and chemical reactions
8. Aqueous solutions : chemistry of the hydrosphere
9. Thermochemistry : energy changes in chemical reactions
10. Properties of gases : the air we breathe
11. Properties of solutions : their concentrations and colligative properties
12. Thermodynamics : why chemical reactions happen
13. Chemical kinetics : clearing the air
14. Chemical equilibrium : equal but opposite reaction rates
15. Acid-base equilibria : proton transfer in biological systems
16. Additional aqueous equilibria : chemistry and the oceans
17. Electrochemistry : the quest for clean energy
18. The solid state : a particulate view
19. Organic chemistry : fuels, pharmaceuticals, and modern materials
20. Biochemistry : the compounds of life
21. Nuclear chemistry : the risks and benefits
22. The main group elements : life and the periodic table
23. Transition metals : biological and medical applications
