

Chapter 1: Mineral Sampling

- 1.1 Introduction
- 1.2 Statistical Terminology
- 1.3 Mineral Particles Differing in Size – Gy’s Method
- 1.4 Mineral Particles of Different Density
- 1.5 Incremental Sampling
- 1.6 Continuous Sampling of Streams
- 1.7 Sampling Ores of Precious Metals
- 1.8 Sampling Nomographs
- 1.9 Problems

References

Chapter 2: Particle Size Estimation and Distributions

- 2.1 Introduction
- 2.2 Methods of Size Estimation
- 2.3 Particle Size Distribution
- 2.4 Combining Size Distributions
- 2.5 Problems

References

Chapter 3: Size Reduction and Energy Requirement

- 3.1 Introduction
- 3.2 Design of Size Reduction Processes
- 3.3 Energy for Size Reduction – Work Index
- 3.4 Estimation of Work Index for Crushers and Grinding Mills
- 3.5 Factors Affecting the Work Index
- 3.6 Approximation Methods for Work Index
- 3.7 Work Index and Abrasion
- 3.8 Problems

References

Chapter 4: Jaw Crusher

- 4.1 Introduction
- 4.2 Design of Jaw Crushers
- 4.3 Jaw Crusher Operation
- 4.4 Jaw Crusher Capacity Estimation
- 4.5 Critical Operating Speed
- 4.6 Power Consumption Estimation
- 4.7 Problems

References

Chapter 5: Gyratory and Cone Crusher

- 5.1 Introduction
- 5.2 Design of Gyratory Crushers
- 5.3 Gyratory Crusher Circuit Design
- 5.4 Gyratory Crusher Operation
- 5.5 Capacity of Gyratory and Cone Crushers
- 5.6 Power Consumption of Gyratory and Cone Crushers
- 5.7 Problems

References

Chapter 6: Roll Crushers

- 6.1 Introduction
- 6.2 Design of Roll Crushers
- 6.3 Operation of Roll Crushers
- 6.4 Capacity of Roll Crushers
- 6.5 Power Consumption of Roll Crushers
- 6.6 High Pressure Grinding Rolls (HPGR)

- 6.7 Operation of HPGR
- 6.8 Capacity of HPGR
- 6.9 Power Consumption of HPGR
- 6.10 Problems
- Chapter 7: Tubular Ball Mills
 - 7.1 Introduction
 - 7.2 Design of Tubular Mills
 - 7.3 Operation of Tubular Ball Mills
 - 7.4 Estimation of Mill Capacity
 - 7.5 Mill Power Draw-Mechanical Methods
 - 7.6 Problems
 - References
- Chapter 8: Tubular Rod Mills
 - 8.1 Introduction
 - 8.2 Design of Rod Mills
 - 8.3 Operation of Rod Mills
 - 8.4 Rod Mill Capacity
 - 8.5 Rod Mill Power Draft
 - 8.6 Rod Mill Drive
 - 8.7 Problems
 - References
- Chapter 9: Autogenous and Semi-Autogenous Mills
 - 9.1 Introduction
 - 9.2 Design of AG/SAG Mills
 - 9.3 Operation of AG/SAG Mills
 - 9.4 AG/SAG Mill Power
 - 9.5 Choice of Options between AG and SAG Mills
 - 9.6 Problems
 - References
- Chapter 10: Stirred Mills – Ultrafine Grinding
 - 10.1 Introduction
 - 10.2 Vertical Mills
 - 10.3 Horizontal Disc Mill – IsaMill
 - 10.4 Design Testwork
 - 10.5 Problems
 - References
- Chapter 11: Mathematical Modelling of Comminution Processes
 - 11.1 Introduction
 - 11.2 Basis for Modelling Comminution Systems
 - 11.3 Mathematical Models of Comminution Processes
 - 11.4 Modelling Crushing and Grinding Systems
 - 11.5 Problems
 - References
- Chapter 12: Screening
 - 12.1 Introduction
 - 12.2 Basic Design Features of Screens
 - 12.3 Operation of Straight Screens
 - 12.4 Capacity and Screen Selection of Straight Screens
 - 12.5 Operation of Curved Screens
 - 12.6 Modelling of the Screening Process
 - 12.7 Screening and Crushing Circuits
 - 12.8 Problems
 - References

Chapter 13: Classification

- 13.1 Introduction
- 13.2 Design Features of Mechanical Classifiers
- 13.3 Designing the Pool Area of Mechanical Classifiers
- 13.4 Design Features of Centrifugal Classifiers
- 13.5 Operation of Mechanical Classifiers
- 13.6 Capacity of Mechanical Classifiers
- 13.7 Operation of Centrifugal Classifiers
- 13.8 Hydrocyclone Models
- 13.9 Hydrocyclone Capacity
- 13.10 Hydrocyclone Circuits
- 13.11 Problems

References

Chapter 14: Solid – Liquid Separation – Thickening

- 14.1 Introduction
- 14.2 Design Features of Thickeners
- 14.3 Thickener Design-Batch Process
- 14.4 Thickener Design-Continuous Thickeners
- 14.5 Operation of Thickeners
- 14.6 Thickeners in Circuits
- 14.7 Problems

References

Chapter 15: Solid Liquid Separation – Filtration

- 15.1 Introduction
- 15.2 Design Features of Filters
- 15.3 Operation of Filters
- 15.4 Capacity of Continuous Vacuum Filters
- 15.5 Washing of Deposited Cake
- 15.6 Drying of Deposited Cake
- 15.7 Optimum Thickness of Cake
- 15.8 Filtering Media
- 15.9 Filtering Aids
- 15.10 Filtration in Mineral Processing Circuits
- 15.11 Problems

References

Chapter 16: Gravity Separation

- 16.1 Introduction
- 16.2 Particle Settling Rates
- 16.3 Gravity Separation Operations
- 16.4 Jigs
- 16.5 Differential Motion Table Separators
- 16.6 Flowing Film Concentrators
- 16.7 Dense (or Heavy) Media Separation
- 16.8 Gravity Separation Performance
- 16.9 Problems

References

Chapter 17: Magnetic and Electrostatic Separation

- 17.1 Introduction
- 17.2 Atomic Theory of Magnetism
- 17.3 Types of Magnetism in Minerals
- 17.4 Magnetic Properties of Some Selected Commercial Minerals
- 17.5 Industrial Roll Design and Methods of Magnetic Separation of Minerals
- 17.6 Electrical Conductivity of Minerals

17.7 Electrostatic Forces and Mineral Separation

17.8 Practical Separation Units

Chapter 18: Flotation

18.1 Introduction

18.2 Flotation Reagents

18.3 Flotation Equipment

18.4 Flotation Circuits

18.5 Flotation Kinetics

18.6 Factors Affecting the Rate of Flotation

18.7 Application of Kinetic Equations

18.8 Other Flotation Models

18.9 Problems

References

Chapter 19: Metallurgical Process Assessment

19.1 Introduction

19.2 Analyses of Constituents

19.3 Definition of Terms

19.4 Material Balance

19.5 Circulating Load

19.6 Problems

References

Chapter 20: Process Control

20.1 Introduction

20.2 Controller Modes

20.3 Signals and Responses

20.4 Input and Output Signals of Controllers

20.5 Integration of Processes and Block Diagrams

20.6 Setting and Tuning Controls

20.7 Complex Advanced Controllers

20.8 Dead Time Compensation

20.9 Instrumentation and Hardware

20.10 Controls of Selected Mineral-Processing Circuits

20.11 Advances in Process Control Systems 801

20.12 Expert Systems

20.13 Mechanics of Digital Process Control Systems
