

Table of contents

Introduction.

Materials.

Flexural Analysis and Serviceability of Beams.

Design for Flexure.

Shear and Torsion.

Axial Load Plus Bending--Short Columns.

Slender Columns.

Development and Slicing of Reinforcement.

Continuous Beams and One-Way Slabs.

Detailing of Joints.

Limit Design.

Two-Way Slabs on Stiff Beams.

Yield Line Theory for Slabs.

Strip Method for Slab Design.

Flat Plates and Flat Slabs.

Interaction of Two-Way Slab Systems with Beams and Columns.

Distribution of Concentrated Loads and Other Special Problems.

Cantilever Retaining Wall Design.

Footings.

Prestressed Concrete Analysis.

Composite Beams.

Shear Walls.

Detailing for Seismic Resistance.

Appendices.

Index.
