- Ch. 1: Beginning Concepts and Resistive Circuits
- 1.1. Why Circuit Theory is Important
- 1.2. Assumptions of Circuit Theory
- 1.3. Charges, Voltages, and Currents
- 1.4. Power, Energy, and the Passive Sign Convention
- 1.5. Independent and Dependent Sources
- 1.6. The Resistor and Ohm's Law
- 1.7. Kirchhoff's Current Law
- 1.8. Kirchhoff's Voltage Law
- 1.9. Kirchhoff's Laws and Validity of Circuit Connections
- 1.10. Series Resistors and the Voltage-Divider Rule
- 1.11. Parallel Resistors and the Current-Divider Rule
- 1.12. Series-Parallel Combinations of Resistors
- 1.13. Other Configurations and Delta-Wye
- and Wye-Delta Transformations
- 1.14. Superposition
- 1.15. Summary
- 1.16. Problems Ch. 2: Nodal Analysis
- 2.1. Introduction and Definitions
- 2.2. The Basic Node Voltage Method (NVM)
- 2.3. The NVM and Alternate Node Numbering
- 2.4. The NVM with Four Essential Nodes
- 2.5. The NVM with Dependent Sources
- 2.6. The NVM with a Known Node Voltage
- 2.7. The NVM with a Supernode

## 2.8. Summary

- 2.9. Problems Ch. 3: Operational Amplifier Circuits
- 3.1. Introduction to Operational Amplifiers
- 3.2. Analysis of Operational Amplifier Circuits
- 3.3. Analysis of a Saturated Operational Amplifier Circuit
- 3.4. Analysis of a Circuit Involving Multiple Op Amps
- 3.5. Inverting Amplifier
- 3.6. Non-Inverting Amplifier
- 3.7. Summing Amplifier
- 3.8. Difference Amplifier
- 3.9. Design of Op Amp Circuits
- 3.10. Non-ideal Characteristics of Op Amps
- 3.11. Summary
- 3.12. ProblemsCh. 4: Mesh Analysis
- 4.1. Introduction and Basic Definitions
- 4.2. Applicability of the Mesh Current Method
- 4.3. The Basic Mesh Current Method (MCM)
- 4.4. The MCM with More Than Two Meshes
- 4.5. The MCM with a Known Mesh Current
- 4.6. The MCM with a Supermesh
- 4.7. The Double Supermesh
- 4.8. A Supermesh Containing a Known Mesh Current
- 4.9. The MCM with a Dependent Source
- 4.10. Choosing Between the MCM and the NVM
- 4.11. Summary

- 4.12. ProblemsCh. 5: Thevenin's and Norton's Theorems
- 5.1. Thevenin's Theorem
- 5.2. Thevenin Equivalent for a Circuit with Only Independent Sources
- 5.3. Thevenin Equivalent for a Circuit with Mixed Sources
- 5.4. Thevenin Equivalent for a Circuit Containing
- only Dependent Sources
- 5.5. Source Transformations
- 5.6. Norton's Theorem
- 5.7. Maximum Power Transfer
- 5.8. Summary
- 5.9. ProblemsCh. 6: First-Order Circuits
- 6.1. Introduction
- 6.2. The Capacitor
- 6.3. Parallel Capacitors
- 6.4. Series Capacitors
- 6.5. Natural Response of an RC Circuit
- 6.6. Step Response of an RC Circuit
- 6.7. General Case of Natural and Step Response in an RC Circuit
- 6.8. The Inductor
- 6.9. Series Inductors
- 6.10. Parallel Inductors
- 6.11. Natural Response of an RL Circuit
- 6.12. Step Response of an RL Circuit
- 6.13. General Case of natural and Step Response in an RL Circuit
- 6.14. Sequential Switching in First-Order Circuits

6.15. Summary

- 6.16. ProblemsCh. 7: Second-Order Circuits
- 7.1. Introduction
- 7.2. Natural Response of a Series RLC Circuit
- 7.3 Overdamped Natural Response of a Series RLC Circuit
- 7.4. Critically-Damped Natural Response of a Series RLC Circuit
- 7.5. Underdamped Natural Response of a Series RLC Circuit
- 7.6. Step and Natural Response of a Series RLC Circuit
- 7.7. Natural Response of a Parallel RLC Circuit
- 7.8. Step and Natural Response of a Parallel RLC Circuit
- 7.9. General RLC Circuit
- 7.10. Summary
- 7.11. ProblemsCh. 8: Sinusoidal Steady-State Analysis
- 8.1. Introduction
- 8.2. Review of Complex Numbers
- 8.3. Phasors
- 8.4. Impedances
- 8.4.1. Impedance of a Resistor
- 8.4.2. Impedance of an Inductor
- 8.4.3. Impedance of a Capacitor
- 8.4.4. Series Impedances
- 8.4.5. Parallel Impedances
- 8.4.6. Combinations of Series and Parallel Impedances
- 8.4.7. Impedance and Admittance
- 8.5. Sinusoidal Steady-State Analysis

- 8.6. Nodal Analysis in Circuits with Sinusoidal Excitation
- 8.7. Mesh Analysis in Circuits with Sinusoidal Excitation
- 8.8. Thevenin's and Norton's Theorems in AC Circuits
- 8.8.1. Thevenin's Theorem
- 8.8.2. Source Transformations
- 8.8.3. Norton's Theorem
- 8.9. Sinusoidal Steady-State Power
- 8.9.1. Instantaneous Power, Average Power,
- and Reactive Power
- 8.9.2. Average Power and Root Mean Square (RMS)
- Values of Voltage or Current
- 8.9.3. Complex Power S
- 8.10. Maximum Power Transfer in Circuits with
- Sinusoidal Excitation
- 8.11. Three-Phase Circuits and Systems
- 8.11.1. Three-Phase Configurations
- 8.11.2. Balanced Wye-Wye System
- 8.11.3. Balanced Delta-Delta System
- 8.11.4. Unbalanced Three-Phase System
- 8.12. Mutual Inductance and Transformers
- 8.12.1. Fundamental Considerations
- 8.12.2. The Dot Convention for Polarities
- 8.12.3. The Linear Transformer in the Phasor Domain
- 8.12.4. The Ideal Transformer
- 8.13. Summary

- 8.14. ProblemsCh. 9: Frequency Response
- 9.1. Introduction
- 9.2. Passive Filters
- 9.3. Active Filters
- 9.3.1. Sallen and Key Low-Pass Filter
- 9.3.2. Sallen and key High-Pass Filter
- 9.3.3. Multiple Feedback Bandpass Filter
- 9.4. Summary
- 9.5. ProblemsApp. A: Resistor Color Code
- App. B: Standard Values of 5% Resistors
- App. C: Standard Values of 10% Capacitors
- App. D: Ceramic Capacitors
- App. E: Electrolytic Capacitors
- App. F: Complex Numbers
- App. G: Cramer's Method
