Foreword xix

Preface xxi

Acknowledgements xxiii

1 Milk fat components and milk quality 1

Iolanda Altomonte, Federica Salari and Mina Martini

1.1 Introduction 1

1.1.1 Milk fat globules 2

1.1.2 Milk fat and fatty acid composition 4

1.2 Conclusions 7

References 7

2 Spore •]forming bacteria in dairy products 11

Sonia Garde Lopez •]Brea, Natalia Gomez •]Torres and Marta Avila Arribas

2.1 Introduction 11

2.2 The bacterial spore 13

2.2.1 Structure and chemical composition of bacterial spores 14

2.2.1.1 Exosporium 14

2.2.1.2 Spore coat 14

2.2.1.3 Outer spore membrane 15

2.2.1.4 Cortex and germ cell wall 15

2.2.1.5 Inner spore membrane 15

2.2.1.6 The core spore 15

2.2.2 Spore resistance 16

2.2.3	Life cycle of spore •]forming bacteria	17
2.3	Spore •]forming bacteria important for the dairy industry	18
2.3.1	Class Bacilli	18
2.3.1.1	Bacillus genus	19
2.3.1.1.1	Bacillus cereus	19
2.3.1.1.2	Other Bacillus species	20
2.3.1.1.3	Importance of Bacillus spp. in the dairy industry	21
2.3.1.2	Geobacillus and Anoxybacillus genera	24
2.3.1.3	Paenibacillus genus	25
2.3.2	Class Clostridia	25
2.3.2.1	Clostridium botulinum	26
2.3.2.2	Clostridium perfringens	28
2.3.2.3	Clostridium tyrobutyricum and related species	28
2.4	Control strategies to prevent poisoning and spoilage of milk and dairy products by spore •]forming bacteria	30
2.5	Conclusions	31
	References	32
3	Psychrotrophic bacteria	37
	Milena Brasca, Marilu Decimo, Stefano Morandi, Solimar Goncalves Machado, Francois Bagliniere and Maria Cristina Dantas Vanetti	
3.1	Introduction	37
3.2	Sources of psychrotrophic bacteria contamination of milk	38
3.3	Important spoilage psychrotrophic bacteria in milk	42
3.4	Molecular tools to characterize psychrotrophic bacteria	43

3.5 Influence of psychrotrophic contamination of raw milk on dairy product quality 45

3.5.1 Bacterial proteases and proteolytic changes in milk 46

3.5.2 Bacterial lipases and phospholipases and their significance in milk 49

3.6 Regulation of extracellular enzymes 52

3.7 Control of psychrotrophic bacteria and related enzymes 53

3.8 Conclusions 54

References 54

4 Stabilization of milk quality by heat treatments 63

Palmiro Poltronieri and Franca Rossi

4.1 Introduction 63

4.2 Thermal treatments of milk 63

4.2.1 Thermization 63

4.2.2 Pasteurization 64

4.2.3 Grade A pasteurized milk 66

4.3 Milk sterilization 67

4.3.1 Control of proper time/temperature setting for safety of milk and milk products 67

4.4 Diseases associated with unpasteurized milk, or post •]pasteurization dairy •]processing contamination 68

4.5 Conclusions 68

References 68

5 Genomics of LAB and dairy •]associated species 71

Palmiro Poltronieri, Franca Rossi, Cesare Camma, Francesco Pomilio and Cinzia Randazzo

5.1 Introduction 71

5.2 Genomics of lab and dairy •]associated species 71

5.2.1	Next •]generation sequencing of strains, dairy starter genomics and metagenomics	72
5.2.2	Pacific Bioscience single •]molecule real •]time sequencing technology	73
5.2.3	Illumina MySeq and HiSeq 2000	73
5.2.4	Ion Torrent platform	73
5.3	NGS platform applied to sequencing of microbial communities	74
5.3.1	Pangenomics	74
5.3.2	Omic technologies: transcriptomics, proteomics, functional genomics, systems biology	75
5.4	Metabolomics and proteomics	76
5.4.1	Subcellular localisation (SLC): secretion systems for secreted proteins	77
5.4.2	Interactome for cell adhesion and pathogen exclusion	78
5.4.3	Lab peptidome	79
5.5	Comparative genomics of dairy •]associated bacteria: the lactobacillus genus complex, streptococci/lactococci, enterococci, propionibacteria and bifidobacteria	79
5.5.1	Comparative genomics of Lb. rhamnosus and Lb. casei	83
5.5.2	Lb. casei core genome and ecotype differences in dairy adapted strains	84
5.6	Clustered Regularly Interspaced Short Palindromic Repeats (CRISPR) in adaptive immunity	84
5.7	Regulation in carbon metabolism	85
5.7.1	Transcriptional and posttranscriptional regulation in carbon metabolism	85
5.7.2	Two •]component systems and phosphorylation in sugar substrate regulation	86
5.7.3	Regulatory RNAs and alternative sigma factors in gene expression	87
5.8	Conclusions	88
	References	88
6	Metabolism and biochemistry of LAB and dairy •]associated species	97

Palmiro Poltronieri, Giovanna Battelli and Nicoletta Pasqualina Mangia

6.1 Introduction 97

6.2 Carbohydrate substrates, glycolysis and energy production 98

6.2.1 Pentose phosphate pathway 99

6.2.2 Citrate fermentation 99

6.3 Proteolysis, protein substrates and amino acid availability influencing gene expression 100

6.3.1 Cell • envelope proteinases: the Prt system 101

6.3.2 Oligopeptide permeases and other transporters for peptides and amino acids 101

6.3.3 Peptidolysis and free amino acids 102

6.3.4 Peptidolysis and catabolite repression 105

6.3.5 Amino acid biosynthesis and auxotrophy 105

6.4 Lipolysis, lipases, esterases 106

6.5 Aroma and flavour products of metabolism 107

6.5.1 Aldehydes, alcohols and carboxylic acids 110

6.5.2 Amino acids as precursor flavour compounds 112

6.6 Nonenzymatic production of flavours 113

6.7 Methods of analysis of flavours in dairy products: HPLC, gas chromatography/ mass analysis (GC/MS) 114

6.8 Natural biodiversity of strains in dairy productions 115

6.9 Conclusions 116

References 117

7 Growth needs and culture media for LAB and dairy • associated species 123

Giuseppe Blaiotta, Maria Aponte and Palmiro Poltronieri

7.1 Introduction 123

7.2	Established culture media for lactobacilli	123
7.2.1	Rogosa agar	124
7.2.2	MRS medium	125
7.2.3	Skim milk and whey agar	125
7.3	M17 medium for selection and enumeration of lactococci and streptococci	126
7.3.1	St. thermophilus agar	126
7.4	Selective media for lactobacilli	127
7.4.1	MRS vancomycin	127
7.4.2	Additional selective agents	128
7.4.3	MRSV plus selective agents for Lb. casei group enumeration	129
7.4.4	MRS •]salicin, MRS •]sorbitol, MRS •]ribose, MRS gluconate agar	129
7.4.5	MRS •]clindamycin •]ciprofloxacin agar	129
7.4.6	MMV medium for Lb. casei group enumeration	130
7.4.7	MRS containing fructose (MRSF)	130
7.4.8	mMRS •]BPB	131
7.4.9	MRS •]NNLP agar and chromogenic agars for complex communities	131
7.4.10	Homofermentative •]heterofermentative differential medium	131
7.5	Media for the isolation of bifidobacteria	132
7.5.1	MRS •]NNLP agar	133
7.5.2	BSM, WSP, TOS •]MUP	133
7.5.3	MRS •]ABC	134
7.6	Phenotyping	134
7.7	Conclusions	135

References 135

8 LAB species and strain identification 139

Cinzia Randazzo, Alessandra Pino, Koenraad Van Hoorde and Cinzia Caggia

8.1 Introduction 139

8.2 Genotypic fingerprinting methods 140

8.3 Culture •]dependent approaches 142

8.3.1 Random amplification of polymorphic DNA 142

8.3.2 ARDRA and RFLP 143

8.3.3 Ribotyping 143

8.3.4 Repetitive element sequence •]based PCR 144

8.3.5 Amplified fragment length polymorphism 145

8.3.6 Pulsed field gel electrophoresis 145

8.4 Non •]genotypic fingerprinting methods 146

8.5 Culture •]independent approaches 147

8.5.1 Culture •]independent methods for qualitative analysis of dairy foods microbiota 147

8.5.2 Culture •]independent methods for quantitative analysis of dairy foods microbiota 150

8.6 Novel high •]throughput techniques: sequencing and metagenomics 151

8.7 Conclusions 152

References 152

9 LAB strains with bacteriocin synthesis genes and their applications 161

Lorena Sacchini, Giacomo Migliorati, Elisabetta Di Giannatale, Francesco Pomilio and Franca Rossi

9.1 Introduction 161

9.2 Bacteriocins from lab 161

9.3 Potential for use of lab bacteriocins as food preservatives 164

9.4 Bacteriocins produced by dairy lab 165

9.5 Identification of lab •]producing bacteriocins 168

9.6 A novel approach for screening lab bacteriocins 170

9.7 Biotechnological interventions for bacteriocin engineering 171

9.8 Conclusions 172

References 172

10 Starter strains and adjunct non •]starter lactic acid bacteria (NSLAB) in dairy products 177

Paola Dolci and Luca Cocolin

10.1 Introduction 177

10.2 Controlled fermentation 177

10.2.1 Natural versus selected lactic acid bacteria starters 178

10.2.2 Starter strains: selection parameter approaches and strain concept 179

10.2.3 Starter culture formulation 180

10.3 Adjunct non •]starter lactic acid bacteria 181

10.3.1 Biodiversity and adaptation to cheese environment 181

10.3.2 Prospective in industrial application 182

10.3.3 Biopreservation and health benefits 183

10.4 Conclusions 185

References 185

11 Milk Fat: stability, separation and technological transformation 191

Gianluigi Scolari

11.1 Introduction 191

11.1.1	Composition and physical state of milk fat	192
11.1.2	Melting point of milk fat	194
11.2	Physical instability of milk fat	194
11.3	Milk fat separation	195
11.3.1	Flocculation or natural creaming	195
11.3.2	Milk fat separation by centrifugation	197
11.4	Partial coalescence	199
11.4.1	General aspects	199
11.4.2	Barrier against coalescence	201
11.4.2.1	Low molecular mass surfactants	201
11.4.2.2	Large sized surfactants (casein micelle)	202
11.4.2.3	Polymeric surfactants (proteins and polysaccharides)	203
11.4.2.4	Mixed films	203
11.5	Foam in milk and cream	204
11.5.1	General aspects	204
11.5.1.1	Foam formation without surfactants	204
11.5.1.2	Foam formation with surfactants	205
11.5.1.3	Drainage of dispersion liquid in foam	206
11.5.2	Foam from cream containing more than 30% milk fat	207
11.6	Whipped cream and butter	209
11.6.1	Technological factors affecting whipped cream and butter production	209
11.7	Churning process	210
11.7.1	Type of cream	210

11.7.2 Physical (crystallization) and biological maturation of cream before churning 212

11.7.3 Churning technology 215

11.7.4 Continuous churning 216

11.7.5 Moulding and packaging 217

11.8 Conclusions 217

References 218

12 Biological traits of lactic acid bacteria: industrial relevance and new perspectives in dairy applications 219

Diego Mora, Fabio Dal Bello and Stefania Arioli

12.1 Introduction 219

12.2 Selecting fermenting bacteria for their ability to have a respiratory metabolism 220

12.3 Selecting galactose •]positive yogurt cultures: working "against the natural evolution of the species" 221

12.4 Accelerating the milk acidification process by selecting proteinase •]positive strains 222

12.5 Accelerating the milk acidification process by selecting urease •]negative *S. thermophilus* strains 224

12.6 Protective cultures for dairy applications: "work but please do not grow and do not modify the sensory profile of the product" 225

12.7 Selection of starter culture free of transferable antibiotic •]resistance mechanisms 227

12.8 Conclusions 228

References 229

13 Lactic acid bacteria bacteriophages in dairy products: problems and solutions 233

Giorgio Giraffa, Miriam Zago and Domenico Carminati

13.1 Introduction 233

13.2	Phage classification	234
13.3	Phage •]host interactions	236
13.4	Sources of contamination	238
13.4.1	Milk and cheese whey	238
13.4.2	Dairy cultures	239
13.4.2.1	The lysogenic state	239
13.5	Phage detection and quantification	240
13.6	Methods to control phage contamination	242
13.6.1	Phage inactivation by physical treatments	242
13.6.2	Phage inactivation by chemical treatments	244
13.6.3	Phage control by biological approaches	245
13.7	Conclusions	246
14	Lactic acid bacteria: a cell factory for delivering functional biomolecules in dairy products	251
Tiziana Silveti, Stefano Morandi and Milena Brasca		
14.1	Introduction	251
14.2	Vitamins	253
14.2.1	Vitamin B2 or Riboflavin	254
14.2.2	Vitamin B9 or Folate	255
14.2.3	Vitamin B12 or cobalamin	256
14.2.4	Vitamin K: menaquinone	257
14.2.5	Other B •]group vitamins	258
14.3	Minerals	258
14.4	Bioactive compounds	261

14.4.1 Anti •]hypertensive peptides	262
14.4.2 Antioxidative peptides	263
14.4.3 Bioactive amines	265
14.4.4 Immune system affecting peptides	267
14.4.5 Opioid peptides	267
14.4.6 Metal •]binding peptides	268
14.4.7 Conjugated linoleic acid and conjugated linolenic acid	268
14.5 Low •]calorie sweeteners	269
14.6 Exopolysaccharides (EPS)	271
14.7 Conclusions	273
References	273
15 Dairy technologies in yogurt production	279
Panagiotis Sfakianakis and Constantina Tzia	
15.1 Introduction	279
15.2 Yogurt types	280
15.3 Yogurt manufacturing process	281
15.3.1 Initial treatment of milk	281
15.3.2 Standardization of milk components ? fat and SNF content	283
15.3.3 Homogenization	284
15.3.4 Heat treatment	286
15.3.5 Fermentation process	288
15.3.5.1 Monitoring of fermentation process ? prediction of fermentation evolution	290
15.3.6 Post •]fermentation processing	292

15.3.6.1 Cooling ? addition of additives 292

15.3.6.2 Addition of fruit 292

15.3.6.3 Packaging 294

15.3.7 Quality control of yogurt production 294

15.4 Conclusions 295

References 295

16 Milk protein composition and sequence differences in milk and fermented dairy products affecting digestion and tolerance to dairy products 299

Maria Gabriella Giuffrida, Marzia Giribaldi, Laura Cavallarin and Palmiro Poltronieri

16.1 Introduction 299

16.2 Caseins 301

16.2.1 Gene polymorphisms in ? •]casein genes 302

16.2.2 Gene polymorphisms in ? •]casein gene 303

16.3 Proteolytic release of bioactive peptides in fermented milk and cheese 304

16.4 Minor milk proteins 305

16.4.1 Lactoferrin 305

16.4.2 ? •]Lactoglobulin (? •]LG) 306

16.4.3 ? •]Lactalbumin (? •]LA) 306

16.5 Proteins with bioactive roles 307

16.6 MFGM-associated proteins 308

16.7 Cow's milk protein allergy (CMPA) 308

16.8 Conclusions 309
