

# Table of contents

Preface ix

## Chapter 1: Crystals and Crystal Structures 1

1.1 Crystal Families and Crystal Systems 1

1.2 Unit Cells and Miller Indices 4

1.3 The Determination of Crystal Structures 6

1.4 The Description of Crystal Structures 6

1.5 Crystal Structures: Metals 8

1.5.1 The Cubic Close-packed (A1) Structure of Copper 9

1.5.2 The Body-Centred Cubic (A2) Structure of Tungsten 9

1.5.3 The Hexagonal (A3) Structure of Magnesium 10

1.6 Crystal Structures: Binary Compounds 10

1.6.1 The *Halite* (Rock Salt, NaCl) Structure 10

1.6.2 The *Rutile* Structure 11

1.6.3 The *Fluorite* Structure 11

1.7 The Cubic *Perovskite* Structure 12

1.8 The Structure of Urea 13

1.9 The Density of a Crystal 14

Answers to Introductory Questions 15

Problems and Exercises 16

## Chapter 2: Lattices, Planes and Directions 19

2.1 Two-dimensional Lattices 19

2.2 Unit Cells 22

2.3 The Reciprocal Lattice in Two Dimensions	22
2.4 Three-dimensional Lattices	26
2.5 Rhombohedral, Hexagonal and Cubic Lattices	29
2.6 Alternative Unit Cells	30
2.7 The Reciprocal Lattice in Three Dimensions	31
2.8 Lattice Planes and Miller Indices	34
2.9 Hexagonal Lattices and Miller-Bravais Indices	37
2.10 Miller Indices and Planes in Crystals	37
2.11 Directions	39
2.12 Lattice Geometry	41
Answers to Introductory Questions	44
Problems and Exercises	44

### **Chapter 3: Two-dimensional Patterns and Tiling 49**

3.1 The Symmetry of an Isolated Shape: Point Symmetry	49
3.2 Rotation Symmetry of a Plane Lattice	52
3.3 The Symmetry of the Plane Lattices	53
3.4 The Ten Plane Crystallographic Point Symmetry Groups	55
3.5 The Symmetry of Patterns: The 17 Plane Groups	57
3.6 Two-dimensional Crystal Structures	63
3.7 General and Special Positions	66
3.8 Tessellations	68
Answers to Introductory Questions	71
Problems and Exercises	71

## **Chapter 4: Symmetry in Three Dimensions 75**

- 4.1 The Mirror Plane and Axes of Rotation 75
- 4.2 Axes of Inversion: Rotoinversion 77
- 4.3 Axes of Inversion: Rotoreflexion 80
- 4.4 The Hermann-Mauguin Symbols for Point Groups 81
- 4.5 The Symmetry of the Bravais Lattices 83
- 4.6 The Crystallographic Point Groups 84
- Answers to Introductory Questions 87
- Problems and Exercises 88

## **Chapter 5: Symmetry and Physical Properties 93**

- 5.1 Properties and Symmetry 93
- 5.2 Point Groups and Physical Properties 94
- 5.3 Specification of Physical Properties 96
- 5.4 Refractive Index 97
- 5.5 Optical Activity 100
  - 5.5.1 Specific Rotation 100
  - 5.5.2 Crystal Symmetry and Optical Activity 101
  - 5.5.3 Optical Activity in Homogeneous Crystals 101
  - 5.5.4 Optical Activity in Crystals Containing Molecules 102
  - 5.5.5 Optical Activity and Chiral Molecules 103
  - 5.5.6 Optical Activity, Chemical Reactivity and Symmetry 103
- 5.6 The Pyroelectric Effect 104
  - 5.6.1 Pyroelectric and Ferroelectric Crystals 104

5.6.2 Crystallographic Aspects of Pyro- and Ferroelectric Behaviour 106

5.7 Dielectric Properties 109

5.7.1 Dielectrics 109

5.7.2 Isotropic Materials 110

5.7.3 Non-isotropic Materials 110

5.8 Magnetic Point Groups and Colour Symmetry 111

Answers to Introductory Questions 113

Problems and Exercises 114

## **Chapter 6: Building Crystal Structures from Lattices and Space Groups 117**

6.1 Symmetry of Three-dimensional Patterns: Space Groups 117

6.2 The Crystallographic Space Groups 119

6.3 Space Group Symmetry Symbols 121

6.4 The Graphical Representation of the Space Groups 125

6.5 Building a Structure from a Space Group:  $C_3P_7$  128

6.6 The Structure of Diopside,  $MgCaSi_2O_6$  131

6.7 The Structure of Alanine,  $C_3H_7NO_2$  134

Answers to Introductory Questions 139

Problems and Exercises 139

## **Chapter 7: Diffraction and Crystal Structure Determination 143**

7.1 The Occurrence of Diffracted Beams: Bragg's Law 144

7.2 The Geometry of the Diffraction Pattern 145

7.3 Particle Size 149

7.4 The Intensities of Diffracted Beams 150

7.5	The Atomic Scattering Factor	151
7.6	The Structure Factor	152
7.7	Structure Factors and Intensities	156
7.8	Numerical Evaluation of Structure Factors	158
7.9	Symmetry and Reflection Intensities	159
7.10	The Temperature Factor	161
7.11	Powder X-ray Diffraction	163
7.12	Neutron Diffraction	168
7.13	Structure Determination Using X-ray Diffraction	169
7.14	Solving the Phase Problem	171
7.15	Electron Microscopy	172
7.15.1	Diffraction Patterns and Structure Images	172
7.15.2	Diffraction and Fourier Transforms	177
7.16	Protein Crystallography	178
7.16.1	The Phase Problem	178
7.16.2	The Crystallinity Problem: SFX	182
7.16.3	The Crystallinity Problem: Single Particle Cryo-EM	183
	Answers to Introductory Questions	185
	Problems and Exercises	186
	<b>Chapter 8: The Depiction of Crystal Structures</b>	<b>189</b>
8.1	The Size of Atoms	189
8.2	Sphere Packing	190
8.3	Metallic Radii	193

8.4 Ionic Radii	194
8.5 Covalent Radii	197
8.6 Van der Waals Radii	198
8.7 Ionic Structures and Structure Building Rules	198
8.8 The Bond Valence Model	199
8.9 Structures in Terms of Non-metal (Anion) Packing	202
8.10 Structures in Terms of Metal (Cation) Packing	203
8.11 Cation-Centred Polyhedral Representations of Crystals	204
8.12 Polyhedral Representations of Crystals and Diffusion Paths	207
8.13 Structures as Nets	210
8.14 Organic Structures	212
8.15 Protein Structures	212
8.15.1 Proteins: Primary Structure	212
8.15.2 Proteins: Secondary, Tertiary and Quaternary Structure	214
Answers to Introductory Questions	218
Problems and Exercises	219
<b>Chapter 9: Defects, Modulated Structures and Quasicrystals</b>	<b>223</b>
9.1 Defects and Occupancy Factors	223
9.2 Defects and Unit Cell Parameters	225
9.3 Defects and Density	226
9.4 Modular Structures	227
9.5 Polytypes	231
9.6 Crystallographic Shear (CS) Phases	233

9.7 Planar Intergrowths and Polysomes 237

9.8 Incommensurately Modulated

Structures 242

9.9 Quasicrystals 248

Answers to Introductory Questions 252

Problems and Exercises 253

**Appendices 257**

Appendix A Vector Addition and Subtraction 257

Appendix B Crystallographic Data for Some Inorganic Crystal Structures 259

Appendix C Schoenflies Symbols 263

Appendix D The 230 Space Groups 267

Appendix E Complex Numbers 271

Appendix F Complex Amplitudes 273

Answers to Problems and Exercises 275

Bibliography 283

Index 289
