| List of Figures | xiii |
| List of Contributors | xxxiii |
| Preface | xxxvii |
| Acknowledgments | xxxix |
| 1 Textile-Supported Wireless Energy Transfer | 1 |
| 1.1 Miroslav Cupal, Jaroslav Lacik, Zbynek Raida, Jan Spurek, and Jan Velim | 1 |
| 1.1.1 Introduction | 1 |
| 1.1.2 Textile-Coated Single-Wire Transmission Line | 3 |
| 1.1.3 Textile-Integrated Components | 6 |
| 1.1.3.1 Fabrication of the Top Conductive Layer and the Bottom One | 8 |
| 1.1.3.2 Fabrication of Conductive Vias of Side Walls | 8 |
| 1.1.4 In-Vehicle Wireless Energy Transfer | 15 |
| 1.5 Summary | 24 |
| References | 25 |
| 2 A Review of Methods for the Electromagnetic Characterization of Textile Materials for the Development of Wearable Antennas | 27 |
| 2.1 Caroline Loss, Ricardo Goncalves, Pedro Pinho, and Rita Salvado | 27 |
| 2.1.1 Introduction | 27 |
| 2.2 Electromagnetic Properties of Materials | 29 |
| 2.2.1 Conductive Fabrics | 29 |
| 2.2.2 Dielectric Fabrics | 31 |
| 2.3 Dielectric Characterization Methods Applied to Textile Materials and Leather: A Survey | 32 |
| 2.3.1 Resonant Methods | 33 |
| 2.3.1.1 Cavity Perturbation Methods | 33 |
| 2.3.1.2 Microstrip Resonator Patch Method | 35 |
| 2.3.1.3 Microstrip Resonator Ring Method | 35 |
| 2.3.1.4 Microstrip Patch Sensor | 35 |
| 2.3.1.5 Agilent 85070E Dielectric Measurement Probe Kit | 39 |
| 2.3.1.6 Summary of the Characterization of Textile Materials by Resonant Methods | 40 |
| 2.3.2 Nonresonant Methods | 40 |
| 2.3.2.1 Parallel Plate Method | 40 |
| 2.3.2.2 Free Space Methods | 41 |
| 2.3.2.3 Planar Transmission Lines Methods | 44 |
| 2.3.2.4 Summary of the Characterization of Textile Materials by Nonresonant Methods | 46 |
| 2.4 Some Factors that Affect the Measurement of Dielectric Properties of Textiles | 46 |
| 2.4.1 Influence of the Moisture Content | 46 |
| 2.4.2 Influence of the Material Anisotropy | 47 |
| 2.4.3 Influence of the Bulk Porosity | 47 |
| 2.4.4 Influence of the Surface Features | 48 |
| 2.5 Conclusions | 48 |
| Acknowledgments | 50 |
| References | 50 |
| 3 Smart Beamforming Techniques for "On Demand" WPT | 57 |
| 3.1 Diego Masotti, Mazen Shanawani, and Alessandra Costanzo | 57 |
| 3.1.1 Introduction | 57 |
| 3.2 Basics of Time-modulated Arrays | 61 |
| 3.3 Nonlinear/Full-Wave Co-simulation of TMA | 63 |
| 3.4 Two-Step Agile WPT Strategy | 64 |
| 3.4.1 Localization Step | 65 |
| 3.4.2 Power Transfer Step | 66 |
| 3.5 Simulation Results | 68 |
| 3.5.1 Localization Step | 68 |
| 3.5.2 Power Transfer Step | 69 |
| 3.6 Measured Results | 73 |
| 3.7 TMA Architecture for Fundamental Pattern Steering | 76 |
| 3.8 Conclusion | 81 |
| References | 82 |
| 4 Backscatter a Solution for IoT Devices | 85 |
| 4.1 Daniel Belo, Ricardo Correia, Marina Jordao, Pedro Pinho, and Nuno B. Carvalho | 85 |
| 4.1.1 Backscatter Basics | 85 |
| 4.1.1.1 Different Backscatter Sensors Development | 87 |
| 4.1.1.2 Backscatter with WPT Capabilities | 87 |
| 4.1.1.3 High-Order Backscatter Modulation | 88 |
| 4.1.1.4 Modulated High-Bandwidth Backscatter with WPT Capabilities | 89 |
| 4.2 An IoT-Complete Sensor with Backscatter Capabilities | 90 |
| 4.2.1 System Description | 91 |
| 4.2.2 Digital Component | 92 |
| 4.2.3 Measurements | 94 |
| 4.3 The Power Availability for These Sensors | 97 |
| 4.3.1 Electronically Steerable Phased Array for Wireless Power Transfer Applications | 98 |
| 4.3.2 Wireless Energy Receiving Device | 101 |
| 4.3.3 Experimental Results | 104 |
| 4.4 Characterization of High-Order Modulation Backscatter Systems | 107 |
| 4.4.1 Characterization System | 107 |
| 4.4.2 Measurements | 110 |
| References | 114 |
| 5 Ambient FM Backscattering Low-Cost and Low-Power Wireless RFID Applications | 117 |
| 5.1 Spyridon N. Daskalakis, Ricardo Correia, John Kimionis, George Goussetis, Manos M. Tentzeris, Nuno B. Carvalho, and Apostolos Georgiadis | 117 |
| 5.1.1 Introduction | 117 |
| 5.2 Ambient Backscattering | 120 |
| 5.2.1 Ambient FM Backscattering | 122 |
| 5.2.2 Binary Modulation Tag | 124 |
| 5.2.3 4-PAM Tag | 125 |
| 5.2.4 Binary Telecommunication Protocol | 127 |
| 5.2.5 4-PAM Telecommunication Protocol | 129 |
| 5.2.6 Receiver | 129 |
| 5.2.7 Software Binary Receiver | 130 |
| 5.2.8 Software 4-PAM Receiver | 132 |
| 5.2.9 Experimental and Measurement Results | 132 |
| 5.3 Conclusions | 138 |
| Acknowledgments | 139 |
| References | 139 |
| 6 Backscatter RFID Sensor System for Remote Health Monitoring | 145 |
| 6.1 Jasmin Grosinger | 145 |
| 6.1.1 Introduction | 145 |
| 6.2 On-Body System | 146 |
| 6.2.1 Body Model | 146 |
| 6.2.2 Antennas | 149 |
| 6.2.2.1 Monopole Antennas | 149 |
| 6.2.2.2 Patch Antennas | 151 |
| 6.3 Radio Channel | 152 |
| 6.3.1 Measurement Setup | 153 |
| 6.3.2 Comparison of Simulations and Measurements | 154 |
| 6.3.3 Measurement Results | 156 |
| 6.3.3.1 Antenna Matching | 156 |
| 6.3.3.2 Channel Gain | 157 |
| 6.4 System Performance | 159 |
| 6.4.1 Forward Link | 162 |
| 6.4.1.1 System Example | 165 |
| 6.4.2 Backward Link | 166 |
| 6.4.2.1 System Example | 166 |
| 6.5 Conclusions | 168 |
| Acknowledgments | 169 |
| References | 170 |
| 7 Robotics Meets RFID for Simultaneous Localization (of Robots and Objects) and Mapping (SLAM) - A Joined Problem | 175 |
| 7.1 Antonis G. Dimitriou, Stavroula Siachalou, Emmanouil Tsardoulis, and Loukas Petrou | 175 |
| 7.1.1 Scope | 175 |
| 7.2 Introduction | 176 |
| 7.3 Localization of RFID Tags - Prior Art | 182 |
| 7.3.1 Multipath in Passive RFID Systems | 184 |
| 7.3.2 Representative Localization Techniques | 185 |

7.3.2.1 Angle of Arrival 185 7.3.2.2 Received Signal Strength - Bayes' Theorem and Conditional Probability 187 7.3.2.3 Fingerprinting - "Landmarc" 189 7.3.2.4 Holographic Localization 190 7.3.2.5 Other Methods 192 7.3.3 Analysis of Prior Art 194 7.4 A Brief Introduction in SLAM/Localization Techniques 195 7.4.1 Introduction to Localization, Mapping, and SLAM 196 7.4.2 Mathematical Formulation of SLAM 197 7.4.3 Probabilistically Solving SLAM 198 7.4.4 Space Representation in SLAM 201 7.4.5 SLAM Algorithm Selection 202 7.4.5.1 What are the Robot's Sensors? 202 7.4.5.2 Which is the Environmental Morphology? 203 7.4.5.3 How Will the Generated Map Be Utilized? 203 7.4.6 SLAM/Localization and RFID Localization Issues 204 7.5 Prototype - Experimental Results 206 7.5.1 Equipment 206 7.5.2 Methodology 208 7.5.2.1 Phase 1 208 7.5.2.2 Phase 2 209 7.5.3 Results 212 7.6 Discussion 216 Acknowledgments 218 References 218 8 From Identification to Sensing: Augmented RFID Tags 223 Konstantinos Zannas, Hatem El Matbouly, Yvan Duroc, and Smail Tedjini 8.1 Introduction 223 8.2 Generic RFID Communication Chain 226 8.2.1 RFID Sensor Tag 226 8.2.2 RFID Data Capture Level 228 8.2.3 RFID Tag Process Level 229 8.2.4 RFID Communication Channel 231 8.2.5 RFID Reader Process Level and RFID Reader 232 8.3 RFID Sensor Tags: Examples from Literature or Commercially Available 233 8.3.1 Examples from Literature 234 8.3.2 Examples Commercially Available 239 8.4 Comparison of Different Types of RFID Temperature Sensors 240 8.5 Conclusion 242 References 243 9 Autonomous System of Wireless Power Distribution for Static and Moving Nodes of Wireless Sensor Networks 247 Przemyslaw Kant, Karol Dobrzyniewicz, and Jerzy Julian Michalski 9.1 Introduction 247 9.2 Data Routing in WSN Based on Multiple Spanning Trees Concept 248 9.2.1 Multiple Spanning Trees Routing Protocol 249 9.2.2 Software WSN Simulator 252 9.2.3 Experimental Verification 253 9.3 WPT System for 2D Distributed WSN 256 9.3.1 System Concept 257 9.3.2 Physical Realization of 2D WPT System 260 9.3.3 Experimental Verification of the 2DWPT System 264 9.3.4 Tests of 2D WPT System with Implemented Switching Algorithm 266 9.4 WPT System for 3D Distributed WSN 269 9.4.1 Design of Components of the 3D WPT System 272 9.5 Locating System and Electromagnetic Power Supply for WSN in 3D Space 275 9.5.1 Tracking Subsystem 276 9.5.2 Data Exchange System 278 9.5.3 Angular Position Estimation of Moving WSN Node 279 9.5.4 Experimental Verification 281 9.5.5 Adaptation of the System to WPT for WSN 282 9.5.5.1 Tracking System 282 9.5.5.2 WSN Node 282 9.6 Summary 283 References 284 10 Smartphone Reception of Microwatt, Meter to Kilometer Range Backscatter Resistive/Capacitive Sensors with Ambient FM Remodulation and Selection Diversity 287 Georgios Vougioukas and Aggelos Bletsas 10.1 Introduction 287 10.2 Operating Principle 291 10.2.1 Backscatter Communication 291 10.2.2 FM Remodulation 292 10.3 Impact of Noise 293 10.3.1 High SNR Case 294 10.3.2 Low SNR Case 301 10.4 Occupied Bandwidth 302 10.5 Ambient Selection Diversity 303 10.6 Analog Tag Implementation 304 10.6.1 Sensing Capacitor and Control Circuit 305 10.6.1.1 Generating $\mu(t)$ - First Modulation Level 305 10.6.1.2 Generating $x_{FM}(t)$ - Second Modulation Level 306 10.6.2 RF-Switch 306 10.6.3 Power Consumption and Supply 306 10.6.3.1 Batteryless Tag with Photodiode 307 10.6.3.2 Batteryless Tag with Solar Panel 307 10.6.3.3 Batteryless Tag with Lemons 307 10.6.4 Receiver 308 10.6.4.1 Smartphone 308 10.6.4.2 Computer 309 10.7 Performance Characterization 309 10.7.1 Simulation Results 309 10.7.2 Tag Indoor and Outdoor Performance 312 10.8 Conclusions 313 10.9 Bandwidth of $J_0(2\rho \sin(\omega_{sens}/2 t))$ 314 10.10 Expectation of the Absolute Value of a Gaussian R.V 316 10.11 Probability of Outage Under Ambient Selection Diversity 316 Acknowledgment 318 References 318 11 Design of an ULP-ULV RF-Powered CMOS Front-End for Low-Rate Autonomous Sensors 323 Hugo Garcia-Vazquez, Alexandre Quenon, Grigory Popov, and Fortunato Carlos Dualibe 11.1 Introduction 323 11.2 Characterization of the Technology 326 11.2.1 gm/ID Curves 326 11.2.2 COX and COX 329 11.2.3 Early Voltage (VA) 331 11.3 Ultra-Low Power and Ultra-Low Voltage RF-Powered Transceiver for Autonomous Sensors 332 11.3.1 Power Management (PM) and Receiver (RX) 332 11.3.1.1 Rectifier 333 11.3.1.2 Voltage Reference (VREF) Circuit 335 11.3.1.3 Comparator for Power Management (COMP1) 335 11.3.1.4 Current Reference Circuit (IREF) 336 11.3.1.5 Comparator for the Demodulation (COMP2) 336 11.3.2 Control Unit (CU) 336 11.3.3 Transmitter (TX) 337 11.3.3.1 Voltage-controlled oscillator (VCO)

337 11.3.3.2 Power amplifier (PA) with built-in driver 340 11.4 Experimental Results 341 11.5 Conclusion
