Contents

1 REVIEW OF ELECTROMAGNETIC THEORY 1

1.1 Introduction to Microwave Engineering 1

Applications of Microwave Engineering 2
A Short History of Microwave Engineering 6
Electromagnetic Compatibility and Electromagnetic Interference 6

1.2 Maxwell's Equations 7

1.3 Fields in Media and Boundary Conditions 11

Fields at a General Material Interface 13
Fields at a Dielectric Interface 14
Fields at the Interface with a Perfect Conductor (Electric Wall) 14
The Magnetic Wall Boundary Condition 15
The Radiation Condition 15

1.4 The Wave Equation and Basic Plane Wave Solutions 15

The Helmholtz Equation 15
Plane Waves in a Lossless Medium 16
Plane Waves in a General Lossy Medium 17
Plane Waves in a Good Conductor 18

1.5 General Plane Wave Solutions 20

Circularly Polarized Plane Waves 23

1.6 Energy and Power 24

Power Absorbed by a Good Conductor 25

1.7 Plane Wave Reflection from a Media Interface 27

General Medium 27
Lossless Medium 28
Good Conductor 30
Perfect Conductor 31
The Surface Impedance Concept 31

1.8 Oblique Incidence at a Dielectric Interface 33

Parallel Polarization 34
Perpendicular Polarization 35
Total Reflection and Surface Waves 37

1.9 Some Useful Theorems 38

The Reciprocity Theorem 38
Image Theory 39

2 TRANSMISSION LINE THEORY 47

2.1 The Lumped-Element Circuit Model for a Transmission Line 47

Wave Propagation on a Transmission Line 48
The Lossless Line 49

2.2 Field Analysis of Transmission Lines 50

Transmission Line Parameters 50
The Telegrapher Equations Derived from Field Analysis of a Coaxial Line 52
Propagation Constant, Impedance, and Power Flow for the Lossless Coaxial Line 53

2.3 The Terminated Lossless Transmission Line 54

Special Cases of Lossless Terminated Lines 57

2.4 The Smith Chart 60

The Combined Impedance–Admittance Smith Chart 63
The Slotted Line 65
Online Smith Chart 68

2.5 Generator and Load Mismatches 68

Load Matched to Line 70
Generator Matched to Loaded Line 70
Conjugate Matching 70

2.6 Lossy Transmission Lines 72

The Low-Loss Line 72
The Distortionless Line 73

COPYRIGHTED MATERIAL

The Terminated Lossy Line 74
The Perturbation Method for Calculating Attenuation 74
The Wheeler Incremental Inductance Rule 76

2.7 Transients on Transmission Lines 78

Reflection of Pulses from a Terminated Transmission Line 78
Bounce Diagrams for Transient Propagation 80

3 TRANSMISSION LINES AND WAVEGUIDES 87

3.1 General Solutions for TEM, TE, and TM Waves 88

TEM Waves 89
Impossibility of TEM Mode 91
TE Waves 91
TM Waves 92
Attenuation Due to Dielectric Loss 92

3.2 Parallel Plate Waveguide 93

TEM Modes 93
TM Modes 95
TE Modes 98

3.3 Rectangular Waveguide 101

TE Modes 101
TM Modes 105
TE_{m0} Modes of a Partially Loaded Waveguide 109

3.4 Circular Waveguide 112

TE Modes 113
TM Modes 116

3.5 Coaxial Line 121

TEM Modes 121
Higher Order Modes 122

3.6 Surface Waves on a Grounded Dielectric Sheet 125

TM Modes 125
TE Modes 127

3.7 Stripline 130

Formulas for Propagation Constant, Characteristic Impedance, and Attenuation 132
An Approximate Electrostatic Solution 134

3.8 Microstrip Line 136

Formulas for Effective Dielectric Constant, Characteristic Impedance, and Attenuation 137
Frequency-Dependent Effects and Higher Order Modes 139

3.9 The Transverse Resonance Technique 141

TE_{0n} Modes of a Partially Loaded Rectangular Waveguide 142

3.10 Wave Velocities and Dispersion 143

Group Velocity 143

3.11 Summary of Transmission Lines and Waveguides 145

Other Types of Lines and Guides 146

4 MICROWAVE NETWORK ANALYSIS 153

4.1 Impedance and Equivalent Voltages and Currents 154

Equivalent Voltages and Currents 154
The Concept of Impedance 157
Even and Odd Properties of $Z(\omega)$ and $\Gamma(\omega)$ 159

4.2 Impedance and Admittance Matrices 160

Reciprocal Networks 162
Lossless Networks 163

4.3 The Scattering Matrix 164

Reciprocal Networks and Lossless Networks 167
A Shift in Reference Planes 169
Power Waves and Generalized Scattering Parameters 171

4.4 The Transmission *(ABCD)* Matrix 174

Relation to Impedance Matrix 175
Equivalent Circuits for Two-Port Networks 177

4.5 Signal Flow Graphs 177

Decomposition of Signal Flow Graphs 180
Application to Thru-Reflect-Line Network Analyzer Calibration 183

4.6 Discontinuities and Modal Analysis 187

Modal Analysis of an *H*-Plane Step in Rectangular Waveguide 187

4.7 Excitation of Waveguides—Electric and Magnetic Currents 193

Current Sheets That Excite Only One Waveguide Mode 193
Mode Excitation from an Arbitrary Electric or Magnetic Current Source 195

5 IMPEDANCE MATCHING AND TUNING 204

5.1 Matching with Lumped Elements (*L* Networks) 205

Analytical Solutions 205
Smith Chart Solutions 206

5.2 Single-Stub Tuning 209

Shunt Stubs 210
Series Stubs 213

5.3 Double-Stub Tuning 216

Smith Chart Solution 216
Analytical Solution 219

5.4 The Quarter-Wave Transformer 220

The Impedance Viewpoint 220
The Multiple-Reflection Viewpoint 222
Impedance Matching of the Quarter-Wave Transformer 223

5.5 The Theory of Small Reflections 226

Single-Section Transformer 226
Multisection Transformer 228

5.6 Binomial Multisection Matching Transformers 228

5.7 Chebyshev Multisection Matching Transformers 232

Chebyshev Polynomials 232
Design of Chebyshev Transformers 233

5.8 Tapered Lines 236

Exponential Taper 237
Triangular Taper 238
Klopfenstein Taper 238

6 MICROWAVE RESONATORS 244

6.1 Series and Parallel Resonant Circuits 244

Series Resonant Circuit 244
Parallel Resonant Circuit 247
Loaded and Unloaded Q 249

6.2 Transmission Line Resonators 249

Short-Circuited $\lambda/2$ Line 250
Short-Circuited $\lambda/4$ Line 252
Open-Circuited $\lambda/2$ Line 252

6.3 Rectangular Waveguide Cavity Resonators 254

Resonant Frequencies 254
Unloaded Q of the $TE_{10\ell}$ Mode 256

6.4 Circular Waveguide Cavity Resonators 258

Resonant Frequencies 258
Unloaded Q of the $TE_{nm\ell}$ Mode 260

6.5 Dielectric Resonators 263

Resonant Frequencies of $TE_{01\delta}$ Mode 263

6.6 Excitation of Resonators 266

The Coupling Coefficient and Critical Coupling 266
A Gap-Coupled Microstrip Resonator 268

7 POWER DIVIDERS AND DIRECTIONAL COUPLERS 275

7.1 Basic Properties of Dividers and Couplers 275

Three-Port Networks (T-Junctions) 275
Four-Port Networks (Directional Couplers) 278

7.2 The T-Junction Power Divider 282

Lossless Divider 282
Resistive Divider 284

7.3 The Wilkinson Power Divider 285

Even-Odd Mode Analysis 285
Unequal Power Division and N-Way Wilkinson Dividers 288

7.4 Waveguide Directional Couplers 290

Bethe Hole Coupler 290
Design of Multihole Couplers 294

7.5 The Quadrature (90°) Hybrid 298

Even-Odd Mode Analysis 299

7.6 Coupled Line Directional Couplers 302

Coupled Line Theory 302
Design of Coupled Line Couplers 306
Design of Multisection Coupled Line Couplers 310

7.7 The Lange Coupler 313

7.8 The 180° Hybrid 316

Even-Odd Mode Analysis of the Ring Hybrid 318
Even-Odd Mode Analysis of the Tapered Coupled Line Hybrid 321
Waveguide Magic-T 324

7.9 Other Couplers 325

8 MICROWAVE FILTERS 333

8.1 Periodic Structures 334

Analysis of Infinite Periodic Structures 334
Terminated Periodic Structures 336
k-β Diagrams and Wave Velocities 337

8.2 Filter Design by the Image Parameter Method 340

Image Impedances and Transfer Functions for Two-Port Networks 340
Constant-k Filter Sections 342
m-Derived Filter Sections 344
Composite Filters 347

8.3 Filter Design by the Insertion Loss Method 349

Characterization by Power Loss Ratio 350
Maximally Flat Low-Pass Filter Prototype 352
Equal-Ripple Low-Pass Filter Prototype 355
Linear Phase Low-Pass Filter Prototypes 355

8.4 Filter Transformations 355

Impedance and Frequency Scaling 356
Bandpass and Bandstop Transformations 361

8.5 Filter Implementation 364

Richards' Transformation 364
Kuroda's Identities 364
Impedance and Admittance Inverters 369

8.6 Stepped-Impedance Low-Pass Filters 370

Approximate Equivalent Circuits for Short Transmission Line Sections 370
Comparison of Richards' Transformation and Stepped-Impedance Method 373

8.7 Coupled Line Filters 373

Filter Properties of a Coupled Line Section 374
Design of Coupled Line Bandpass Filters 377

9 THEORY AND DESIGN OF FERRIMAGNETIC COMPONENTS 387

9.1 Basic Properties of Ferrimagnetic Materials 388

The Permeability Tensor 388
Circularly Polarized Fields 392
Effect of Loss 394
Demagnetization Factors 396

9.2 Plane Wave Propagation in a Ferrite Medium 399

Propagation in Direction of Bias (Faraday Rotation) 399
Propagation Transverse to Bias (Birefringence) 402

9.3 Propagation in a Ferrite-Loaded Rectangular Waveguide 404

TE_{m0} Modes of Waveguide with a Single Ferrite Slab 404
TE_{m0} Modes of Waveguide with Two Symmetric Ferrite Slabs 407

9.4 Ferrite Isolators 408

Resonance Isolators 409
The Field Displacement Isolator 411

9.5 Ferrite Phase Shifters 413

Nonreciprocal Latching Phase Shifter 414
Other Types of Ferrite Phase Shifters 416
The Gyrator 417

9.6 Ferrite Circulators 418

Properties of a Mismatched Circulator 418
Junction Circulator 419

10 NOISE AND NONLINEAR DISTORTION 427

10.1 Noise in Microwave Circuits 427

Dynamic Range and Sources of Noise 427

Noise Power and Equivalent Noise Temperature 429
Measurement of Noise Temperature 431

10.2 Noise Figure 432

Definition of Noise Figure 432
Noise Figure of a Cascaded System 434
Noise Figure of a Passive Two-Port Network 436
Noise Figure of a Mismatched Lossy Line 437
Noise Figure of a Mismatched Amplifier 439

10.3 Nonlinear Distortion 440

Gain Compression 441
Harmonic and Intermodulation Distortion 442
Third-Order Intercept Point 443
Intercept Point of a Cascaded System 444
Passive Intermodulation 446

10.4 Dynamic Range 447

Linear and Spurious Free Dynamic Range 447

11 ACTIVE RF AND MICROWAVE DEVICES 453

11.1 Diodes and Diode Circuits 453

Schottky Diodes and Detectors 454
PIN Diodes and Control Circuits 458
Varactor Diodes 464
Ridley–Watkins–Hilsum (RWH) Theory 465
Two-Valley Model Theory 465
Other Diodes 467
Power Combining 468

11.2 Bipolar Junction Transistors 469

Bipolar Junction Transistor 469
Heterojunction Bipolar Transistor 470

11.3 Field Effect Transistors 471

Metal Semiconductor Field Effect Transistor 472
Metal Oxide Semiconductor Field Effect Transistor 473
High Electron Mobility Transistor 474

11.4 Microwave Integrated Circuits 475

Hybrid Microwave Integrated Circuits 475
Monolithic Microwave Integrated Circuits 476

11.5 Microwave Tubes 479

Klystron 480
Traveling Wave Tube 482
Backward Wave Oscillator 482
Extended Interaction Oscillator 483
Magnetrons 483
Cross-Field Amplifier 483
Gyratron 483

12 MICROWAVE AMPLIFIER DESIGN 487

12.1 Two-Port Power Gains 487

Definitions of Two-Port Power Gains 487
Further Discussion of Two-Port Power Gains 491

12.2 Stability 492

Stability Circles 493
Tests for Unconditional Stability 495

12.3 Single-Stage Transistor Amplifier Design 498

Design for Maximum Gain (Conjugate Matching) 498
Constant-Gain Circles and Design for Specified Gain 503
Low-Noise Amplifier Design 506
Low-Noise MOSFET Amplifier 510

12.4 Broadband Transistor Amplifier Design 511

Balanced Amplifiers 512
Distributed Amplifiers 514
Differential Amplifiers 518

12.5 Power Amplifiers 521

Characteristics of Power Amplifiers and Amplifier Classes 521
Large-Signal Characterization of Transistors 522
Design of Class A Power Amplifiers 523

13 OSCILLATORS AND MIXERS 529

13.1 RF Oscillators 530

General Analysis 530
Oscillators Using a Common Emitter BJT 531
Oscillators Using a Common Gate FET 533

Practical Considerations 534
Crystal Oscillators 535

13.2 Microwave Oscillators 536

Transistor Oscillators 538
Dielectric Resonator Oscillators 541

13.3 Oscillator Phase Noise 544

Representation of Phase Noise 544
Leeson's Model for Oscillator Phase Noise 545

13.4 Frequency Multipliers 549

Reactive Diode Multipliers (Manley–Rowe Relations) 549
Resistive Diode Multipliers 552
Transistor Multipliers 553

13.5 Mixers 557

Mixer Characteristics 557
Single-Ended Diode Mixer 561
Single-Ended FET Mixer 562
Balanced Mixer 564
Image Reject Mixer 567
Differential FET Mixer and Gilbert Cell Mixer 568
Other Mixers 570

14 INTRODUCTION TO MICROWAVE SYSTEMS 576

14.1 System Aspects of Antennas 576

Fields and Power Radiated by an Antenna 579
Antenna Pattern Characteristics 580
Antenna Gain and Efficiency 582
Aperture Efficiency and Effective Area 583
Background and Brightness Temperature 583
Antenna Noise Temperature and *G/T* 586

14.2 Wireless Communication 588

The Friis Formula 589
Link Budget and Link Margin 590
Radio Receiver Architectures 592
Noise Characterization of a Receiver 594
Digital Modulation and Bit Error Rate 597
Wireless Communication Systems 599

14.3 Radar Systems 603

The Radar Equation 604
Pulse Radar 606
Doppler Radar 607
Radar Cross Section 608

14.4 Radiometer Systems 609

Theory and Applications of Radiometry 609
Total Power Radiometer 611
The Dicke Radiometer 612

14.5 Microwave Propagation 613

Atmospheric Effects 614
Ground Effects 615
Plasma Effects 616

14.6 Other Applications and Topics 616

Microwave Heating 616
Power Transfer 617
Biological Effects and Safety 618

APPENDICES 624

A Prefixes 625
B Vector Analysis 625
C Bessel Functions 627
D Useful Results 629
E Other Mathematical Results 631
F Physical Constants 631
G Conductivities for Some Materials 632
H Dielectric Constants and Loss Tangents for Some Materials 632
I Properties of Some Microwave Ferrite Materials 633
J Standard Rectangular Waveguide Data 633
K Standard Coaxial Cable Data 634

ANSWERS TO SELECTED PROBLEMS 635

INDEX 637
