

About the Author

Contents

Preface

1 Introduction

1.1 Importance of Nanoscale

1.2 Inorganic Nanoparticles

1.2.1 Plasmonic Nanoparticles

1.2.2 Magnetic Nanoparticles

1.3 Organic Nanoparticles

1.4 Synthesis

1.4.1 Top-Down Synthesis

1.4.2 Bottom-Up Synthesis

1.5 Functionalization

1.6 Characterization

1.7 Applications

1.8 Study Questions

1.9 References

2 Nucleation

2.1 Classical Nucleation Theory

2.1.1 Activity-Based Supersaturation

2.1.2 Primary Nucleation

2.1.3 Nucleation Rate

2.1.4 Phase Stability and Phase Transitions

2.2 Alternative Nucleation Hypotheses

2.3 Concluding Remarks

2.4 Study Questions

2.4.1 Concept-Based Questions

2.4.2 Research-Based Questions

2.5 References

3 Crystal Growth

3.1 Classical Theory of Crystal Growth

3.2 Experimental Determination of Growth Rates

3.2.1 Seeded Batch Experiments

3.2.2 Seeded Constant Composition Experiments

3.3 Crystal Size and Size Distribution

3.4 Crystal Morphology

3.5 Concluding Remarks

3.6 Study Questions

3.6.1 Concept-Based Questions

3.6.2 Research-Based Questions

3.7 References

4 Synthesis of Metal Nanoparticles

- 4.1 Reduction of Metal Precursors in Solution
 - 4.1.1 Mechanism
 - 4.1.2 Parameters Influencing Nucleation and Growth
 - 4.1.3 Examples of Metallic Precursor Reduction in Solution
- 4.2 Colloidal Templating: Reverse Micelles as Spherical Nanoreactors
- 4.3 Sol-Gel Method
- 4.4 One-Pot Synthesis Methods: Globular Proteins, Viruses, and Microorganisms
- 4.5 Nucleotide-Mediated Synthesis of Metal Nanoparticles
- 4.6 Natural Selection of Biomolecules Capable of Nanoparticle Formation
- 4.7 Seeded Growth of Gold Nanostructures
 - 4.7.1 Under-Potential Deposition
 - 4.7.2 Face-Specific Capping
 - 4.7.3 Surfactant Templating
- 4.8 Study Questions
 - 4.8.1 Concept-Based Questions
 - 4.8.2 Research-Based Questions
- 4.9 References
- 5 Functionalization of Metal Nanoparticles
 - 5.1 In Situ Functionalization
 - 5.2 Post-Synthesis Functionalization
 - 5.3 Langmuir Adsorption
 - 5.3.1 Theoretical Basis
 - 5.3.2 Assumptions, Caveats, and Validity
 - 5.3.3 Macromolecular Adsorption
 - 5.3.4 Protein Adsorption
 - 5.3.5 Quartz Crystal Microbalance for Studying Adsorption
 - 5.4 Study Questions
 - 5.4.1 Concept-Based Questions
 - 5.4.2 Research-Based Questions
 - 5.5 References
- 6 Synthesis of Polymer-Based Nanoparticles
 - 6.1 Classification of Polymer-Based Nanoparticles
 - 6.1.1 Morphology
 - 6.1.2 Hydrophilicity
 - 6.1.3 Charge
 - 6.1.4 Preparation Techniques
 - 6.1.5 Phase-Based Classification
 - 6.1.6 Mode/Type-Based Classification
 - 6.1.7 Examples of Polymer-Based Nanoparticles: pNIPAm-Based Systems
 - 6.2 Stimuli-Sensitive Hydrogels
 - 6.3 Study Questions
 - 6.3.1 Concept-Based Questions

- 6.3.2 Research-Based Questions
- 6.4 References
- 7 Functionalization and Properties of Hydrogels
 - 7.1 Functionalization
 - 7.1.1 In Situ Functionalization
 - 7.1.2 Post-Synthesis Functionalization
 - 7.2 Properties of Hydrogels
 - 7.2.1 Size
 - 7.2.2 Swelling Collapse
 - 7.2.3 Optical Properties
 - 7.2.4 Water Content
 - 7.2.5 Mechanical Properties
 - 7.3 Study Questions
 - 7.3.1 Concept-Based Questions
 - 7.3.2 Research-Based Question
 - 7.4 References
- 8 Characterization of Metal Nanoparticles
 - 8.1 Optical Properties
 - 8.1.1 Scattering and Absorption
 - 8.1.2 Localized Surface Plasmon Resonance
 - 8.1.3 UV-Vis Spectroscopy
 - 8.2 Dynamic Light Scattering
 - 8.2.1 Theory
 - 8.2.2 Autocorrelation Function
 - 8.2.3 Stokes–Einstein Equation
 - 8.3 Differential Scanning Calorimetry
 - 8.3.1 Mathematical Background
 - 8.3.2 Modulated Differential Scanning Calorimetry
 - 8.4 Scanning Transmission Electron Microscopy
 - 8.5 Fourier Transform Infrared Spectroscopy
 - 8.6 X-ray Photoelectron Spectroscopy
 - 8.7 Study Questions
 - 8.7.1 Concept-Based Questions
 - 8.7.2 Research-Based Questions
 - 8.8 References
- 9 Applications in Catalysis
 - 9.1 Introduction
 - 9.1.1 Brief Introduction to Heterogeneous Catalysis
 - 9.1.2 Adsorption
 - 9.2 Nanoporous Materials—Catalyst Supports and Active Materials
 - 9.2.1 Oxide Supports
 - 9.2.2 Alumina and Silica

9.2.3 Zeolites and Zeotype Materials

9.3 Carbon Materials

9.4 Metal Particles

9.5 Summary and Further Reading

9.6 Study Questions

9.6.1 Concept-Based Questions

9.6.2 Research-Based Questions

9.7 References

10 Applications in Drug Delivery and Biomedicine

10.1 Drug Delivery

10.1.1 Passive Targeting

10.1.2 Active Targeting

10.1.3 Loading and Encapsulation

10.1.4 Drug Release and Mathematical Models

10.2 Magnetic Resonance Imaging

10.2.1 Fundamentals of Magnetic Resonance Imaging

10.2.2 Nanoparticle Contrast Agents for Magnetic Resonance Imaging

10.3 Biosensing

10.4 Study Questions

10.4.1 Concept-Based Questions

10.4.2 Research-Based Questions

10.5 References

11 Applications in Water Management

11.1 Wastewater Treatment

11.1.1 Adsorption

11.1.2 Membrane Separation

11.2 Hydrological Tracers in Water Management

11.2.1 Potential of Covered DNA Tracers: Case Studies

11.2.2 Colloidal Forces Governing Particle–Surface and Particle–Particle Contact

11.2.3 Colloid Filtration and Mechanistic Prediction of Retention

11.2.4 Continuum-Scale Transport Models

11.2.5 Transport of DNA Tracers in Surface Water

11.2.6 Challenges

11.3 Study Questions

11.3.1 Concept-Based Questions

11.3.2 Research-Based Questions

11.4 References

12 Applications in Energy Harvesting

12.1 Harvesting Energy from Heat

12.1.1 Overview

12.1.2 Nanomaterials for Heat Energy Harvesting

12.2 Photovoltaics

12.2.1 Overview

12.2.2 Nanomaterials for Photovoltaics

12.3 Mechanical Energy Harvesting

12.3.1 Overview

12.3.2 Nanomaterials for Mechanical Energy Harvesting

12.4 Magnetic Energy Harvesting

12.4.1 Overview

12.4.2 Magnetic Nanomaterials

12.5 Summary

12.6 Study Questions

12.7 References
