

## CONTENTS

---

Preface	ix
Acknowledgments	xiii
About the Author	xiv
<b>1 Basic Principles</b>	<b>1</b>
1.1 Introduction	1
1.2 Characteristics of Open Channel Flow	1
1.3 Solution of Open Channel Flow Problems	2
1.4 Purpose	2
1.5 Historical Background	2
1.6 Definitions	4
1.7 Basic Equations	5
1.8 A Note on Turbulence	10
1.9 Surface versus Form Resistance	10
1.10 Dimensional Analysis	10
1.11 Computer Programs	14
<b>2 Specific Energy</b>	<b>19</b>
2.1 Definition of Specific Energy	19
2.2 Specific Energy Diagram	21
2.3 Choking	23
2.4 Discharge Diagram	25
2.5 Contractions and Expansions with Head Loss	27
2.6 Critical Depth in Nonrectangular Sections	30
2.7 Overbank Flow	35
2.8 Weirs <i>Sharp-Crested Rectangular Notch Weir / Sharp-Crested Triangular Notch Weir / Broad-Crested Weir / Submerged Rectangular Weir / Long-Throated Flumes</i>	41
2.9 Energy Equation in a Stratified Flow	55
<b>3 Momentum</b>	<b>61</b>
3.1 Introduction	61
3.2 Hydraulic Jump	61
3.3 Stilling Basins	71
3.4 Surges	77
3.5 Bridge Piers	79
3.6 Spur Dikes	81
3.7 Supercritical Transitions <i>Design of Supercritical Contraction / Design of Supercritical Expansion</i>	82

<b>4</b>	<b>Uniform Flow</b>	<b>93</b>
4.1	Introduction	93
4.2	Dimensional Analysis	94
4.3	Momentum Analysis	94
4.4	Background of the Chezy and Manning Formulas	95
4.5	Turbulence and Flow Resistance	97
	<i>Concepts of Turbulence / Turbulent Velocity Distribution and Friction Factor</i>	
4.6	Discussion of Factors Affecting $f$ and $n$	105
4.7	Selection of Manning's $n$ in Natural Channels	109
4.8	Channels with Composite Roughness	112
4.9	Uniform Flow Computations	113
4.10	Partly Full Flow in Smooth, Circular Conduits	116
4.11	Steady Gutter Flow	117
4.12	Gravity Sewer Design	124
4.13	Compound Channels	127
4.14	Design of Channels with Flexible Linings	129
	<i>Riprap-Lined Channels / Grout-Lined Channels</i>	
4.15	Slope Classification	140
4.16	Flood Control Channels	143
	<i>Best Hydraulic Section / Corps of Engineers (CSE) Riprap Design Method</i>	
4.17	Dimensionally Homogeneous Manning's Formula	146
4.18	Channel Photographs	148
<b>5</b>	<b>Gradually Varied Flow</b>	<b>163</b>
5.1	Introduction	163
5.2	Equation of Gradually Varied Flow	163
5.3	Classification of Water Surface Profiles	165
5.4	Lake Discharge Problem	169
5.5	Water Surface Profile Computation	172
5.6	Distance Determined from Depth Changes	173
	<i>Direct Step Method / Direct Numerical Integration</i>	
5.7	Depth Computed from Distance Changes	176
5.8	Natural Channels	184
5.9	Floodway Encroachment Analysis	191
5.10	Inverse Solution	193
5.11	Spatially Varied Flow	195
<b>6</b>	<b>Hydraulic Structures</b>	<b>205</b>
6.1	Introduction	205
6.2	Spillways	205

6.3	Spillway Aeration	216
6.4	Stepped Spillways	218
6.5	Culverts	220
	<i>Inlet Control / Outlet Control / Road Overstepping / Improved Inlets / Culvert Energy Dissipation Structures / Culvert Aquatic Oxygen Passage</i>	
6.6	Bridges	244
	<i>HEC-2 and HEC-RAS / HDS-1 / USGS Walk Construction Method / WSPRO Model / HEC-RAS Bridge Modeling Implementation</i>	
<b>7</b>	<b>Governing Equations of Unsteady Flow</b>	275
7.1	Introduction	275
7.2	Derivation of Saint-Venant Equations	276
	<i>Continuity Equation / Momentum Equation</i>	
7.3	Transformation to Characteristic Form	281
7.4	Mathematical Interpretation of Characteristics	284
7.5	Initial and Boundary Conditions	284
7.6	Simple Wave	287
	<i>Dam-Break Problem</i>	
<b>8</b>	<b>Numerical Solution of the Unsteady Flow Equations</b>	297
8.1	Introduction	297
8.2	Method of Characteristics	298
8.3	Boundary Conditions	301
8.4	Explicit Finite Difference Methods	305
	<i>Lax-Diffusive Scheme / Leapfrog Scheme / Lax-Wendroff Scheme / Predictor-Corrector Methods / Flux-Splitting Schemes / Stability</i>	
8.5	Implicit Finite Difference Method	313
8.6	Comparison of Numerical Methods	317
8.7	Shocks	320
8.8	Dam-Break Problem	321
8.9	Practical Aspects of River Computations	328
<b>9</b>	<b>Simplified Methods of Flow Routing</b>	335
9.1	Introduction	335
9.2	Hydrologic Routing	336
	<i>Reservoir Routing / Stormwater Detention Basin Routing / River Routing</i>	
9.3	Kinematic Wave Routing	348
	<i>Kinematic Shocks and the Muscinali Wave / Muscinali Wave Profile / Kinematic Wave Time of Concentration</i>	
9.4	Diffusion Routing	358
9.5	Mackinac-Cunge Method	361

<b>10</b>	<b>Flow in Alluvial Channels</b>	375
10.1	Introduction	375
10.2	Sediment Properties <i>Particle Size / Particle Shape / Particle Specific Gravity / Bulk Specific Weight / Fall Velocity / Grain Size Distribution</i>	375
10.3	Initiation of Motion	383
10.4	Application to Stable Channel Design	388
10.5	Bed Forms	390
10.6	Stage-Discharge Relationships <i>Engelund's Method / van Rijn's Method / Einstein-Kennedy Method</i>	396
10.7	Sediment Discharge <i>Bed-Load Discharge / Suspended Sediment Discharge / Total Sediment Discharge</i>	402
10.8	Streambed Adjustments and Scour <i>Aggradation and Degradation / Stream Restoration / Bridge Construction Scour / Local Scour / Total Scour / Pile and Abutment Scour Countermeasures</i>	436
<b>11</b>	<b>Three-Dimensional CFD Modeling for Open Channel Flows</b>	457
	<i>By Thorsten Storz</i>	
11.1	Introduction	457
11.2	Governing Equations <i>Conservation of Mass and Momentum / Turbulence and Turbulence Modeling / RANS Turbulence Closure with the Eddy Viscosity Concept / The <math>k</math>-<math>\epsilon</math> Model / The <math>k</math>-<math>\omega</math> Model</i>	458
11.3	Discretization of the Governing Equations <i>Finite Volume Method (FVM)</i>	466
11.4	Boundary Conditions <i>Inflow Boundary Conditions / Outflow Boundary Conditions / Free Surface Boundary / Wall Boundary Conditions / Surface Roughness of Rough Open Channels / Hypothetical Roughness of Natural Rivers</i>	468
11.5	RANS Case Study <i>Background / Model and Setup / Results and Discussion / Conclusions</i>	473
11.6	LES Application <i>Background / LES Method and Setup / Validation and Results</i>	478
	Index	485
