

PREFACE

ACKNOWLEDGEMENTS

INTRODUCTION TO UNIT OPERATIONS: FUNDAMENTAL CONCEPTS

Process

Engineering of Food Processes

Transformation and Commercialization of Agricultural Products

Flow Charts: Description of Some Food Processes

Steady and Unsteady States

Batch, Continuous and Semicontinuous Operations

Unit Operations: Classification

Mathematical Set Up of Problems

UNIT SYSTEMS: DIMENSIONAL ANALYSIS AND SIMILARITY

Magnitude and Unit Systems

Absolute Units

Technical Unit Systems

Engineering Unit Systems

International Unit System (SI)

Thermal Units

Conversion of Units

Dimensional Analysis

Buckingham's Theorem

Dimensional Analysis Methods

Similarity Theory

Geometric Similarity

Mechanical Theory

Problems

INTRODUCTION TO TRANSPORT PHENOMENA

Historic Introduction

Transport Phenomena: Definition

Circulation Regimes: Reynolds' Experiment

Mechanisms of Transport Phenomena

Mass Transfer

Energy Transfer

Momentum Transport

Velocity Laws

Coupled Phenomena

MOLECULAR TRANSPORT OF MOMENTUM, ENERGY AND MASS

Introduction

Momentum Transport: Newton's Law of Viscosity
Energy Transfer: Fourier's Law of Heat Conduction
Mass Transfer: Fick's Law of Diffusion
General Equation of Velocity

AIR-WATER MIXTURES

Introduction
Properties of Humid Air
Mollier's Psychrometric Chart for Humid Air
Wet Bulb Temperature
Adiabatic Saturation of Air
Problems

RHEOLOGY OF FOOD PRODUCTS

Introduction
Stress and Strain
Elastic Solids and Newtonian Fluids
Viscometric Functions
Rheological Classification of Fluid Foods
Newtonian Flow
Non-Newtonian Flow
Viscoelasticity
Effect of Temperature
Effect of the Concentration on the Viscosity
Mechanical Models
Rheological Measurements in Semiliquid Foods
Problems

TRANSPORT OF FLUIDS THROUGH PIPES

Introduction
Circulation of Incompressible Fluids
Macroscopic Balance in the Circulation of Fluids
Mechanical Energy Losses
Friction Factors
Design of Piping
Pumps
Problems

CIRCULATION OF FLUID THROUGH POROUS BEDS: FLUIDIZATION

Introduction
Darcy's Law: Permeability
Previous Definitions

Equations of Flow through Porous Beds

Fluidization

Problems

FILTRATION

Introduction

Filtration Fundamentals

Filtration at Constant Pressure Drop

Filtration at Constant Volumetric Rate

Cake Washing

Filtration Capacity

Optimum Filtration Conditions at Constant Pressure

Rotary-Drum Vacuum Filters

Problems

SEPARATION PROCESSES BY MEMBRANES Introduction

Models of Transfer through the Membrane

Models of Transfer through the Polarization Layer

Inverse Osmosis

Ultrafiltration

Design of Inverse Osmosis and Ultrafiltration Systems

Operative Layout of the Modules

Problems

THERMAL PROPERTIES OF FOODS

Thermal Conductivity

Specific Heat

Density

Thermal Diffusivity

Problems

HEAT TRANSFER BY CONDUCTION

Fundamental Equations of Heat Conduction

Steady-State Heat Conduction

Unsteady-State Heat Conduction

Problems

HEAT TRANSFER BY CONVECTION

Introduction

Heat Transfer Coefficients

Concentric Tube Heat Exchangers

Shell and Tube Heat Exchangers

Plate-Type Heat Exchangers
Extended-Surface Heat Exchangers
Scraped-Surface Heat Exchangers
Agitated Vessels with Jacket and Coils
Heat Exchange Efficiency
Problems

HEAT TRANSFER BY RADIATION

Introduction
Fundamental Laws
Properties of Radiation
View factors
Interchange of Radiation Energy between Surfaces Separated by Non-Absorbent Media
Coefficient of heat transfer by radiation
Simultaneous heat transfer by convection and radiation
Problems

THERMAL PROCESSING OF FOODS

Introduction
Kinetics of Thermal Destruction
Treatment of Packed Products
Thermal Treatment in the Aseptic Processing
Problems

FOOD PRESERVATION BY COOLING

Freezing
Freezing Temperature
Thermal Properties of Frozen Foods
Freezing Time
Design of Freezing Systems
Refrigeration
Refrigeration Mechanical Systems
Refrigerants
Multipressure Systems
Problems

DEHYDRATION

Introduction
Mixture of Two Air Streams
Material and Heat Balances in Idealized Dryers
Dehydration Mechanisms
Chamber and Bed Dryers

Spray Drying
Freeze-Drying
Other Types of Drying
Problems

EVAPORATION

Introduction
Heat Transfer in Evaporators
Single-Effect Evaporators
Use of Released Vapor
Multiple-Effect Evaporators
Evaporation Equipment
Problems

DISTILLATION

Introduction
Liquid-Vapor Equilibrium
Distillation of Binary Mixtures
Continuous Rectification of Binary Mixtures
Discontinuous Rectification
Steam Distillation
Problems

ABSORPTION

Introduction
Liquid-Gas Equilibrium
Absorption Mechanisms
Packed Columns
Plate Columns
Problems

SOLID-LIQUID EXTRACTION

Introduction
Solid-Liquid Equilibrium
Extraction Methods
Solid-Liquid Extraction Equipment
Applications to the Food Industry
Problems

ADSORPTION AND IONIC EXCHANGE

Introduction
Equilibrium Processes

Process Kinetics
Operation by Stages
Movable Bed Columns
Fixed Bed Columns
Problems
