

1. Before you start
2. Introduction to vibration analysis
3. Introduction to modal analysis
4. Modal analysis of distributed systems
5. Modal analysis with pre-stress
6. Modal analysis - properties of lower and higher modes
7. Modal analysis – mass participation, properties of modes
8. Modal analysis – mode separation
9. Modal analysis of axi-symmetric structures
10. Modal analysis – locating structurally weak spots
11. Modal analysis – a diagnostic tool
12. Time response and frequency response of discrete systems
13. Harmonic base excitation of distributed systems
14. Omega square harmonic force excitation
15. Time response analysis, resonance, beating
16. Vibration absorption
17. Random Vibration
18. Response Spectrum analysis
19. Nonlinear vibration
20. Vibration benchmarks
21. Glossary of terms
22. References
23. List of exercises
