

CONTENTS:

Preface

Part I: NOVEL FOOD PROCESSING METHODS

1. Ultrasound Processing of Foods: An Overview

Sandip Prasad, Shruthy Ramesh, and Preetha Radhakrishnan

2. Supercritical Fluid Technology: Recent Trends in Food Processing

Mayuri A. Patil, Aniket P. Sarkate, Bhagwan K. Sakhale, and Rahul C. Ranveer

3. Extrusion Technology of Food Products: Types and Operation

Anjali Sudhakar, Kanupriya Choudhary, Subir Kumar Chakraborty, and Cinu Varghese

4. Fundamentals of Advanced Drying Methods of Agricultural Products

Shikha Pandhi and Arvind Kumar

5. Encapsulation Methods in the Food Industry: Mechanisms and Applications

Rekha Rani, Payal Karmakar, Neha Singh, and Ronit Mandal

Part II: MEMBRANE TECHNOLOGY IN FOOD PROCESSING

6. Membrane Processing in the Food Industry

S. Abdullah, Rama C. Pradhan, and Sabyasachi Mishra

7. Potential of Membrane Technology in Food Processing Systems

Olviya S. Gonsalves, Rahul S. Zambare, and Parag R. Nemade

Part III: MATHEMATICAL MODELLING IN FOOD PROCESSING

8. Mathematical Modelling in Fermentation Processes

Ankit Paliwal and Himjyoti Dutta

9. Modelling of Hydration Kinetics in Grains

Ankit Paliwal, Ashish M. Mohite, and Neha Sharma

Part IV: DECONTAMINATION METHODS FOR FOODS

10. Cold Plasma Processing Methods: Impact of Decontamination on Food Quality

Nikhil K. Mahnot, Sayantan Chakraborty, Kuldeep Gupta, and Sangeeta Saikia

11. Microbial Decontamination of Foods with Cold Plasma: A Noninvasive Approach

Irfan Khan, Nazia Tabassum, and Abdul Haque

12. Food Irradiation: Concepts, Applications, and Future Prospects

Subhajit Ray

Index
