

Contents

Part I Engineering Design and Manufacturing

1	Engineering Design	11
1.1	Objectives	12
1.2	Function (Individual's Activity) and Process (Team's Activity)	14
1.3	Innovation, Customization, Sustainability and Use of Multi Discipline in Engineering Design	15
1.4	Ergonomics	16
1.5	Reliability, Availability, Maintainability and Safety (RAMS)	17
1.6	Modeling and Design	17
1.6.1	Need Analysis	18
1.6.2	Concept Design	19
1.7	Marketing and Sales	28
1.8	Design Analysis Technique	29
1.8.1	Contemporary Analytical Techniques	30
1.8.2	Contemporary Numerical Techniques	30
1.8.3	Contemporary Experimental Techniques	32
1.9	Embodiment Design	33
1.10	Detail Design	34
1.11	Design for Manufacturing (DFM)	35
1.12	Design for Assembly (DFA)	37
1.13	Axiomatic Design	37
1.14	Concurrent Design	38
1.15	UNDP Sustainable Development Goals (SDGs)	38
1.16	Life Cycle Assessment	39
1.17	Sourcing for Engineering Design	39
1.18	Design Documentation	40
1.19	Prototyping	40
1.20	Product Life Cycle and Engineering Design	41

1.21	Case Study—1: Engineering Design Process of Single Plate Clutch Assembly	41
1.21.1	Establishment of Need	42
1.21.2	Concept Design of a Single Plate Clutch Assembly	43
1.22	Case Study—2: Design and Assembly of a Radial Engine Using SolidWorks	47
1.23	Learning Outcomes	58
1.24	Review Questions	61
	Bibliography	62
2	Manufacturing and Production	65
2.1	Objectives	66
2.2	Manufacturing Processes Classification	67
2.3	Manufacturing Systems	80
2.4	Production Planning and Control	94
2.5	Production Documentation	94
2.6	Sourcing—A Detailed Description of Sourcing for Engineering Design	99
2.7	Production Philosophies	136
2.8	Production	136
2.9	Case Study: Design and Manufacturing of a 5-Axis CNC Milling Machine	141
2.10	Learning Outcomes	182
2.11	Review Questions	183
	Bibliography	184
3	Remanufacturing	187
3.1	Objectives	188
3.2	Industry 4.0 Technologies for Remanufacturing	188
3.2.1	Introduction to Industry 4.0	188
3.2.2	Key Technologies for Remanufacturing	190
3.2.3	Technologies Incorporated in Remanufacturing	190
3.3	Integrating and Managing the Technologies Through Remanufacturing	191
3.3.1	Compatibility with Existing Systems	191
3.3.2	Workforce Adaptation	192
3.3.3	Cost and Investment	193
3.3.4	Managerial Strategies	193
3.4	Enhancing Product Life Cycle Through Remanufacturing	193
3.4.1	Environmental Impact	195
3.5	Standards and Regulations for Remanufacturing	195
3.5.1	Specific Standards and Regulations	195
3.5.2	Emerging Needs and New Standards	196
3.5.3	Adaptation and Evolution of Standards	196

- 3.6 Framework and Research Agenda for Remanufacturing 196
 - 3.6.1 IRS and IRIS 198
 - 3.6.2 Role of Product Life Cycle Management and Manufacturing Execution Services (MES) in Intelligent Remanufacturing 203
 - 3.6.3 Research Agenda 204
- 3.7 Learning Outcomes 206
- 3.8 Real Life Examples 206
- 3.9 Case Study in Remanufacturing 206
 - 3.9.1 Caterpillar 207
 - 3.9.2 Xerox 208
 - 3.9.3 Phillips 208
- 3.10 Review Questions 209
- Bibliography 210

Part II Computer Aided Engineering Design and Manufacturing

- 4 Computer-Aided Design 221**
 - 4.1 Objectives 221
 - 4.2 User Interface (UI) and User Experience (UX) 222
 - 4.3 Concept Modeling Using CAD Packages 222
 - 4.4 Embodiment Design Using CAE Packages 223
 - 4.5 Detail Design Using CAE Packages 223
 - 4.6 Design Documentation Using CAD 223
 - 4.7 Case Study: Design and Manufacturing of Industrial Scale 6-Spindle Spinning Machine 224
 - 4.8 Learning Outcomes 279
 - 4.9 Review Questions 280
 - Bibliography 281
- 5 Computer Aided Manufacturing 283**
 - 5.1 Factors Influencing Industrial Activity 283
 - 5.2 Objectives 284
 - 5.3 Contemporary Manufacturing Analysis Technique 285
 - 5.3.1 Graphical Programming Techniques for Discrete Manufacturing 285
 - 5.3.2 Graphical Programming Techniques for Continuous Manufacturing 286
 - 5.4 Modern Microprocessors and Microcontrollers 287
 - 5.4.1 Microcontrollers 288
 - 5.4.2 Processors and Microcontrollers in Manufacturing Applications 288
 - 5.5 Programmable Logic Controller (PLC) 288
 - 5.6 Computer Numerical Control (CNC) 289

5.7 Part Programming 290

5.7.1 EIA RS 274-D:1979 Standard 292

5.7.2 ISO 6983-1:2009 Standard 292

5.7.3 STEP NC Standard 293

5.8 Case Study—Extended Product Life Cycle Code—ePLCC 294

5.9 Learning Outcomes 295

5.10 Review Questions 295

Bibliography 296

Part III Computer-Aided Engineering

6 Computer-Aided Numerical Analysis Techniques 305

6.1 Objectives 305

6.2 Finite Difference Method (FDM) 306

6.2.1 Finite Difference Approximations for Partial Derivatives 307

6.2.2 Finite Difference Approximations for Second Derivatives of Functions 308

6.3 Finite Element Method (FEM) 308

6.3.1 FEM Theory: Procedure for a Sample 1D Problem ... 310

6.4 Finite Volume Method (FVM) 314

6.4.1 Comparison of FVM with FDM and FEM 317

6.5 Boundary Element Method (BEM) 317

6.5.1 Comparison of BEM with FDM and FEM 318

6.6 Application of Computer-Aided Engineering Methods in Solid, Liquid, and Gas-Based Products 318

6.7 Case Studies 319

6.7.1 Case Study—1: Innovative Microfluidic Device for Enhanced Quality Control and Analysis in the Food Industry 319

6.7.2 Fabrication of Microfluidic Device 324

6.7.3 Simulation Analysis 324

6.7.4 Case Study—2: Computer-Aided Design and Analysis of the Shaft and Gearbox System of a Vertical Axis Wind Turbine (VAWT) 328

6.7.5 Case Study—3: CFD Analysis of Wind Flow Over Car 345

6.8 Learning Outcomes 352

6.9 Review Questions 353

Bibliography 354

7	Mathematics for CAD/CAE/CAM	357
7.1	Introduction	357
7.2	Basic Terminology	358
7.3	Anatomy of Curves and Solids	360
7.4	Implicit and Parametric Equations for Geometric Primitives	362
7.5	Case Study: Bezier Curve—In 5-Axis CNC Milling Machine Interpreter Development	365
7.6	Learning Outcomes	367
7.7	Review Questions	367
	Bibliography	368
8	Standards for CAD/CAE/CAM	369
8.1	Objectives	369
8.2	Standards for CAD/CAE/CAM	370
8.3	Information Interchange Standards	370
8.4	Geometry Exchange Standards	370
	8.4.1 DXF	371
	8.4.2 IGES	371
	8.4.3 SET	371
	8.4.4 VDA-FS	372
	8.4.5 PDES	372
	8.4.6 STEP	372
8.5	Other Standards	373
8.6	Case Study: Application of ISO 841:2001 and ISO 6983-1:2009—Scope of Interpreter and Generation of Pseudo Code	374
8.7	Learning Outcomes	393
8.8	Review Questions	394
	Bibliography	394
9	Use of Databases for CAD/CAE/CAM/CIM	397
9.1	Objectives	397
9.2	Relational and Semantic Databases	398
9.3	Geometry Databases	398
9.4	Materials Databases	399
9.5	Machine Elements Database	399
9.6	Control Elements Database	399
9.7	Other Databases	400
9.8	Case Study: Technology Databases for Virtual Manufacturing System	400
	9.8.1 Introduction	400
	9.8.2 Methodology for Generating Database for Job Shop	402

9.8.3 Conclusion 403

9.9 Learning Outcomes 406

9.10 Review Questions 406

Bibliography 407

Part IV Process and Production Planning

10 Computer-Aided Process Planning 413

10.1 Introduction 413

10.2 Process Planning 414

10.3 Computer-Aided Process Planning 416

10.3.1 Generative Process Planning 416

10.3.2 Variant Process Planning 416

10.4 Case Study: Variant Process Planning for a Job Shop 416

10.4.1 Introduction 417

10.4.2 Methodology 418

10.4.3 Process Planning 420

10.5 Conclusion 422

10.6 Learning Outcomes 423

10.7 Review Questions 423

Bibliography 423

11 Production Planning and Control 425

11.1 Objectives 425

11.2 Production Planning and Control 426

11.3 Work in Progress 444

11.4 Scheduling 444

11.4.1 Master Scheduling 444

11.4.2 Maintenance Scheduling 444

11.5 Inventory Management 445

11.6 Value Chain 445

11.7 Supply Chain 445

11.8 Case Study: Short Term Scheduling of Job Shops
in Industry 4.0 Paradigm 445

11.8.1 Introduction 446

11.8.2 Literature Review 447

11.8.3 Methodology 448

11.8.4 Results and Discussion 451

11.9 Learning Outcomes 451

11.10 Review Questions 452

Bibliography 452

Part V Future Manufacturing Techniques

12 Future Manufacturing Techniques 459

12.1 Objectives 459

12.2 Subtractive Manufacturing 460

12.3 Additive Manufacturing 460

12.4 Virtual Manufacturing 468

12.5 Case Study: Analysis of Distortions in Selective Laser
Melted TiAl6V4 Part 469

12.5.1 Abstract 469

12.5.2 Introduction 469

12.5.3 Materials and Methods 471

12.5.4 Results and Discussion 471

12.6 Conclusion 478

12.7 Learning Outcomes 479

12.8 Review Questions 479

Bibliography 479

Part VI Communication

13 Communication Protocols—Legacy and Industry 4.0 485

13.1 Objectives 485

13.2 OSI—Open System Interconnection Standard 486

13.3 Legacy Serial and Parallel Communication Protocols 488

13.3.1 Serial Communication Protocols 488

13.3.2 Parallel Communication Protocols 488

13.4 Advantages and Limitations 488

13.4.1 Advantages of Serial Communication 489

13.4.2 Limitations of Serial Communication 489

13.4.3 Advantages of Parallel Communication 492

13.4.4 Limitations of Parallel Communication 493

13.5 Modern Serial and Parallel Communication Protocols 494

13.5.1 Modern Serial Communication Protocols 494

13.5.2 Modern Parallel Communication Protocols 494

13.6 Advantages and Applications 495

13.6.1 Advantages of Modern Serial Protocols 495

13.6.2 Advantages of Modern Parallel Protocols 496

13.6.3 Application of Modern Serial and Parallel
Protocols 496

13.7 Communication Networks 497

13.8 Case Study: Cyber Security of Communication Networks 499

13.8.1 Serial Communication Standards and Their Cybersecurity Measures 499

13.8.2 Parallel Communication Standards and Their Cybersecurity Measures 500

13.8.3 Internet Protocols with Cybersecurity Measures 500

13.9 Review Questions 502

Bibliography 502

Part VII Future of CAD/CAM

14 Pillars of Industry 4.0 and CAD/CAM 509

14.1 Objectives 509

14.2 Pillars of Industry 4.0 510

14.3 Relation of Industry 4.0 Pillars with CAD/CAM; A Case Study 513

14.3.1 Integration of Industry 4.0 with CAD/CAM 513

14.3.2 Integration of CAD/CAM with Product Life Cycle 514

14.3.3 Integration of Technology Readiness Levels (TRLs) with CAD/CAM and Industry 4.0 518

14.4 Learning Outcomes 520

14.5 Review Questions 520

Bibliography 520

15 Industry 5.0 523

15.1 Objectives 523

15.2 Industry 5.0 Pillars 523

15.2.1 Human-Centric Approach 523

15.2.2 Resilience 524

15.2.3 Sustainability 526

15.3 Linkage of Industry 4.0 with Industry 5.0 527

15.3.1 Key Linkages Between Industry 4.0 and Industry 5.0 528

15.4 Advance Topics 528

15.4.1 Ubiquitous Manufacturing 528

15.4.2 Symbiotic Manufacturing 529

15.4.3 Bionic Manufacturing 530

15.4.4 Self-healing Manufacturing Systems 532

15.5 Merits of Industry 5.0 for CAD/CAM 533

15.6 Case Study: Virtual Factory and Industry 5.0 534

15.7 Learning Outcomes 534

15.8 Review Question 535

Bibliography 535

16 Quantum Computing 537

16.1 Objectives 537

16.2 Basics of Quantum Computing 538

16.3 Free Resources for Quantum Computing (January 2024) 539

16.4 Future of Commercial Quantum Computing and Quantum
Machines 540

16.5 Standards for Quantum Computing 542

16.6 Merits of Quantum Computing for CAD/CAE/CAPP/
CAM/CIM 545

16.7 Case Study: A General Purpose Quantum Information
System 547

16.8 Learning Outcomes 548

16.9 Review Questions 548

Bibliography 548

**17 Nexus of CIM, Industry 4.0, Industry 5.0, and Quantum
Computing 551**

17.1 Objectives 552

17.2 CAD/CAE/CAPP/CAM Complexity Level 552

17.3 Amalgamation of Industry 5.0 Methodologies
for Addressing CAD/CAE/CAPP/CAM Complexities 553

17.4 Top 10 Emerging Technologies of World (2024) 553

17.5 Case Study: eERP—Quantum Information System
for Discrete Manufacturing 554

17.5.1 VMS Administrator 554

17.5.2 VMS Design 554

17.5.3 VMS Planning 555

17.5.4 VMS Vendors 555

17.5.5 VMS Monitor 555

17.5.6 VMS Quality 555

17.5.7 VMS Fault Diagnostics 556

17.6 Learning Outcomes 556

17.7 Review Questions 556

Bibliography 556

Index 559
