

Contents:

Part 1. Introduction.

Advanced composites : from what to why

Part 2. Nanomaterials and their experimental approach : nanostructures, processing and characterization. Performance-based optimal design of multi-layered hybrid composites with halloysite nanoparticles / Soo-Jeong Park, Sung-Min Yoon and Yun-Hae Kim ; Processing of Hierarchical Distributed Halloysite Nanotube (HNT) reinforced composites by electrophoretic deposition / Tianyu Yu and Yun-Hae Kim ; Plasma-treated carbon black nanofiller for improved dispersion and mechanical properties in electrospun complex nanofibers / Tae-Gyu Kim, Jing Jing Zhang and Xing Yan Tan

Part 3. Fracture mechanics for advanced composites : polymer composites, laminated composites and nanocomposites. Characteristics of up-cycling fibers using slag : fiberization process, mechanical properties / Chang-Wook Park, Se-Yoon Kim and Yun-Hae Kim ; Fatigue strength of fiber reinforced composites made of carbon fibers, glass fibers and other fibers / Ri-Ichi Murakami ; Corrosion and tribological properties of basalt fiber reinforced composite materials / Jin-Cheol Ha, Soo-Jeong Park and Yun-Hae Kim

Part 4. In situ characterization and applications. Application of composite in aerospace structure / Do-Hoon Shin ; Application of composite materials for shipbuilding and marine engineering / Sung-Won Yoon ; Automotive and elevator composite structures / Sung-Youl Bae
