<i>Foreword</i>	v
<i>About the Author</i>	ix
<i>Introduction</i>	xiii
Chapter One: Petroleum and Human Society	1
1.1 Introduction	1
1.2 Alternatives to Petroleum	2
1.3 Climate	6
References	12
Chapter Two: What is Petroleum?	15
2.1 Introduction	15
2.2 Hydrocarbons	15
2.3 Natural Gas	16
2.4 Crude Oil	17
2.5 Hydrates	20
2.6 Heavy Oil	22
2.7 Oil Sands	22
References	23
Chapter Three: Where Does Petroleum Come From, and Where is it Now?	25
3.1 Introduction	25
3.2 Background in Geology	25

3.3	Formation of Petroleum	28
3.4	Migration	29
3.5	Traps	31
3.6	Shale Oil and Gas	36
3.7	Abiogenic Theory of Petroleum Formation	37
	References	39
	 Chapter Four: Finding Petroleum	 41
4.1	Introduction	41
4.2	Seeps and Anticlines	41
4.3	Gravity Surveys	43
4.4	Seismic Surveys	44
4.5	Magnetic Surveys	48
4.6	Surface Geochemistry	49
4.7	Drilling	49
	References	49
	 Chapter Five: Drilling	 51
5.1	Introduction	51
5.2	Cable Drilling	51
5.3	Rotary Drilling: Introduction	52
5.4	Drill Bits	53
5.5	Drilling Mud	56
5.6	Casing and Cementing	58
5.7	Drilling Rig	59
5.8	Operation of Rotary Drilling Rig	61
5.9	Directional, Horizontal and Multilateral Drilling	62
5.10	Blowout Prevention	65
5.11	Fishing	65
	References	65

Chapter Six: Producing Petroleum on Land	67
6.1 Introduction	67
6.2 Oil and Gas Flow in Rocks; Single-Phase Flow	68
6.3 Oil and Gas Flow in Rocks: Multi-phase Flow	78
6.4 Interfacial Tension	79
6.5 Fracturing	81
6.6 Pressure Maintenance	84
6.7 Well Spacing	86
6.8 Gas Production from Hydrates	87
References	87
 Chapter Seven: Producing Petroleum Under the Sea	 89
7.1 Introduction	89
7.2 Early History	89
7.3 Mobile Submersible Drilling Rigs	91
7.4 Jack-up Platforms	91
7.5 Fixed Platforms	92
7.6 Floating Systems	97
7.7 Seabed Systems	100
7.8 Moving Petroleum from Offshore	101
References	103
 Chapter Eight: Petroleum Accidents	 105
8.1 Introduction	105
8.2 Drilling Accidents	107
8.2.1 Macondo	107
8.2.2 Lapindo	112
8.2.3 Sea Gem	112
8.2.4 Ocean Odyssey	113
8.3 Onshore Production Accidents	114
8.3.1 Texas City	114

8.4 Offshore Production Accidents	115
8.4.1 Piper Alpha	115
8.4.2 Alexander L. Kielland	116
8.5 Transportation Accidents	117
8.5.1 Floating Pipeline	117
8.5.2 Bromborough	118
8.5.3 Lac-Megantic	118
8.5.4 Prince William Sound, Alaska	118
8.5.5 Bellingham	119
8.6 Conclusions	120
References	121
Chapter Nine: The Future of Petroleum	123
9.1 Introduction	123
9.2 Technological Developments	124
9.2.1 Fracking and Horizontal Drilling	124
9.2.2 Heavy Oil	124
9.2.3 Deep Water	126
9.2.4 Unmanned Platforms	126
9.2.5 Facilities on the Seabed	127
9.3 Economic and Political Developments	128
References	129
Appendix Units	131
References	133
<i>Index</i>	135

## About the Author

**Andrew Palmer** is retired Professor of the Center for Offshore Research and Engineering of the Department of Civil & Environmental Engineering of the National University of Singapore (2006–2015), as well as retired Jafar Research Professor of Petroleum Engineering, Cambridge University, UK. He is a Fellow of the Royal Society, a Fellow of the Royal Academy of Engineering, a Fellow of the Institution of Civil Engineers, and a Chartered Engineer in the UK.

He has divided his career equally between practice as a consulting engineer and university teaching. He was appointed as a Lecturer in the Department of Mechanical Engineering of the University of Liverpool in 1965, and in 1968 as a University Lecturer in the Department of Engineering in the University of Cambridge. In 1975 he joined R.J. Brown and Associates, a company of consulting engineers based in the Netherlands, and was appointed Chief Pipeline Engineer in 1976. In 1979 he was appointed as Professor of Mechanical Engineering in the Department of Mechanical Engineering of the University of Manchester Institute of Science and Technology. In 1982 he returned to R.J. Brown and Associates as Vice-President Engineering, responsible for technical development and innovation.

In 1985 he founded Andrew Palmer and Associates, a company of consulting engineers principally engaged with marine pipelines, but also in defence and Arctic engineering. The company grew to 55 people in offices in London, Glasgow and Aberdeen. The company was bought by Science Applications International Corporation in 1993, and later bought by Penspen.
