

- 1 Fundamental of Calculus p. 1
- 1.1 Functions and Their Graphs p. 1
- 1.2 The Number e p. 5
- 1.3 Integral and Natural Logarithm p. 9
- 1.4 Harmonic Series p. 12
- 2 How to Calculate $[\pi]$ p. 15
- 2.1 Method of Numerical Integral p. 15
- 2.2 Method of Using Taylor Series p. 17
- 2.3 Monte Carlo Method p. 19
- 3 Best Approximations by Fractions p. 23
- 3.1 Best Approximation of an Irrational Number by Fractions p. 24
- 3.2 Frequency Ratio of the Musical Notes p. 25
- 3.3 Expanding Real Numbers into Continued Fractions p. 26
- 3.4 Calculating the Value of Logarithm p. 30
- 3.5 Integer Solutions of Binary Linear Equations p. 33
- 4 Sequences and Series p. 39
- 4.1 The Fibonacci Sequence p. 40
- 4.2 Harmonic Series p. 43
- 4.3 Questions p. 44
- 5 Prime Numbers p. 49
- 5.1 Discrimination and Calculation of Prime Numbers p. 49
- 5.2 Formula of Producing Prime Numbers p. 53
- 5.3 Distribution of Prime Numbers p. 55
- 5.4 Further Problems p. 57
- 6 The Probability p. 61
- 6.1 The Classical Definition of Probability p. 61
- 6.2 The Statistical Definition of Probability p. 64
- 6.3 Binomial Distribution and Poisson Distribution p. 67
- 6.4 Normal Distribution p. 70
- 6.5 The First Arc Sine Law p. 71
- 7 Geometric Transformations p. 73
- 7.1 Linear Transformations and Affine Transformations p. 74
- 7.2 Eigenvectors of Linear Transformations p. 77
- 7.3 Projective Transformations p. 81
- 7.4 Non-Euclidean Geometry p. 83
- 7.5 A Proof of the Fundamental Theorem in Algebra p. 88
- 8 Celestial Movement p. 95
- 8.1 Acceleration of the Planetary Motion p. 96
- 8.2 Celestial Movement under the Universal Gravitation p. 99
- 8.3 Mathematical Simulation of Other Physical Phenomena p. 104
- 9 Iteration(I)--Finding Solutions to Equations p. 113
- 9.1 Finding Roots of Equations p. 113
- 9.2 Iterative Solutions to Linear Equations Sets p. 116
- 9.3 Iterative Solutions to Nonlinear Equations Sets p. 119
- 10 Optimization p. 125
- 10.1 The Law of Light's Refraction p. 125

- 10.2 Dashing for the Optimal Point p. 133
- 10.3 Least Squares Method p. 138
- 11 Brachistochrone p. 143
- 11.1 Calculation of Time p. 143
- 11.2 Looking for the Brachistochrone p. 146
- 11.3 The Figure of the Brachistochrone p. 147
- 11.4 Tautochrone p. 151
- 12 Iteration(II)--Fractal p. 159
- 12.1 Creation Element p. 160
- 12.2 Iteration of Complex Function p. 164
- 12.3 IFS Iteration p. 167
- 13 Iteration(III)--Chaos p. 179
- 13.1 The Periodic Point and Periodic Orbit p. 179
- 13.2 Iteration of Quadratic Functions p. 180
- 13.3 The Feigenbaum Diagram p. 181
- 13.4 Properties of Chaos p. 182
- 13.4.1 Sensitivity to the Initial Values p. 183
- 13.4.2 Chaos Is Not Random p. 183
- 13.5 Iteration of Other Functions p. 184
- 13.6 Listening to Chaos p. 185
- 14 Cryptography p. 189
- 14.1 Monoalphabetic Cipher p. 189
- 14.2 Polyalphabetic Cipher p. 191
- 14.3 Modern Stream Cipher p. 194
- 14.4 Public Keys p. 198
- 15 Mechanical Proving of Elementary Geometrical Theorems p. 203
- 15.1 Converting Geometrical Problems to Algebraic Ones p. 204
- 15.2 Derivation and Proving of Algebraic Relational Expressions p. 208
- Bibliography p. 217
